## Salesforce Certified Development Lifecycle and Deployment Architect Sample Questions (Q81-Q86):

### NEW QUESTION # 81

Universal Containers (UC) have developed a managed package targeted for AppExchange. The product includes some Apex code to customize and create layouts. UC is in the testing phase of the package, so it's not certified yet. During testing on the target org, the Apex code for the layouts fails.

Why are the Apex classes not able to access the metadata of the target org during testing?

- A. UC needs to get the managed package certified by the Salesforce security review.
- B. The solution is flawed. UC should utilize the Tooling API from a web service call to modify the layouts.
- C. UC needs to turn on Apex Settings within the custom metadata type.
- **D. Apex Settings to allow the access to metadata is not switched on.**

**Answer: D**

### NEW QUESTION # 82

Universal Containers is about to begin the release of a major project. To facilitate this, they have several sandboxes to make their deployment train. These sandboxes are a mix of preview and non-preview instances.

What should the architect recommend?

- A. No advice needed, mixing instance types is important for regression testing.
- B. Contact support to roll back the release when Salesforce upgrades the sandboxes.
- **C. Refresh all non-preview sandboxes during the release preview window.**
- D. Refresh all non-preview sandboxes when the release management team has time.

**Answer: C**

Explanation:

Explanation

Refreshing all non-preview sandboxes during the release preview window is the best way to handle the situation of having a mix of preview and non-preview instances for the release of a major project. A release preview window is a period of time before a Salesforce seasonal release, where the customers can test their applications and integrations in a sandbox that has the same version as the upcoming release. By refreshing all non-preview sandboxes during this window, the architect can ensure that all the sandboxes are aligned with the same version and avoid any conflicts or errors during the deployment. Refreshing the sandboxes when the release management team has time, mixing instance types, or contacting support to rollback the release are not good practices, as they can cause inconsistency, confusion, or disruption in the release process.

### NEW QUESTION # 83

Universal Containers (UC) Customer Community is scheduled to go live in the Europe, Middle East, and Africa (EMEA) region in 3 months. UC follows a typical centralized governance model. Two weeks ago, the project stakeholders informed the project team about the recent changes in mandatory compliance requirements needed to go live. The project team analyzed the requirements and have estimated additional budget needs of 30
