New Terraform-Associate-003 Dumps Questions & Minimum Terraform-Associate-003 Pass Score

To pass the HashiCorp Terraform-Associate-003 exam on the first try, candidates need HashiCorp Certified: Terraform Associate

(003) (HCTA0-003) updated practice material. Preparing with real Terraform-Associate-003 exam questions is one of the finest strategies for cracking the exam in one go. Students who study with HashiCorp Terraform-Associate-003 Real Questions are more prepared for the exam, increasing their chances of succeeding. Finding original and latest Terraform-Associate-003 exam questions however, is a difficult process. Candidates require assistance finding the Terraform-Associate-003 updated questions.

HashiCorp Certified: Terraform Associate (003) (HCTA0-003) Sample Questions (Q96-Q101):

NEW QUESTION # 96

What is the provider for this resource?

```
resource "aws_vpc" "main" {
  name = "test"
}
```

- A. Test
- B. Main
- C. aws
- D. Vpc

Answer: C

Explanation:

In the given Terraform configuration snippet:

```
resource "aws_vpc" "main" {
  name = "test"
}
```

The provider for the resource `aws_vpc` is `aws`. The provider is specified by the prefix of the resource type. In this case, `aws_vpc` indicates that the resource type `vpc` is provided by the `aws` provider.

NEW QUESTION # 97

Terraform configuration (including any module references) can contain only one Terraform provider type.

- A. False
- B. True

Answer: A

Explanation:

Terraform configuration (including any module references) can contain more than one Terraform provider type. Terraform providers are plugins that Terraform uses to interact with various cloud services and other APIs. A Terraform configuration can use multiple providers to manage resources across different platforms and services. For example, a configuration can use the AWS provider to create a virtual machine, the Cloudflare provider to manage DNS records, and the GitHub provider to create a repository.

Terraform supports hundreds of providers for different use cases and scenarios.

NEW QUESTION # 98

If a module declares a variable with a default, that variable must also be defined within the module.

- A. False
- B. True

Answer: A

Explanation:

A module can declare a variable with a default value without requiring the caller to define it. This allows the module to provide a sensible default behavior that can be customized by the caller if needed. References =

[Module Variables]

NEW QUESTION # 99

What value does the Terraform Cloud private registry provide over the public Terraform Module Registry?

- A. The ability to share modules with public Terraform users and members of Terraform Cloud Organizations
- **B. The ability to restrict modules to members of Terraform Cloud or Enterprise organizations**
- C. The ability to tag modules by version or release
- D. The ability to share modules publicly with any user of Terraform

Answer: B

Explanation:

The Terraform Cloud private registry provides the ability to restrict modules to members of Terraform Cloud or Enterprise organizations. This allows you to share modules within your organization without exposing them to the public. The private registry also supports importing modules from your private VCS repositories. The public Terraform Module Registry, on the other hand, publishes modules from public Git repositories and makes them available to any user of Terraform. References = : Private Registry - Terraform Cloud : Terraform Registry - Provider Documentation

NEW QUESTION # 100

A provider configuration block is required in every Terraform configuration.

Example:

```
provider "provider name" {  
  ...  
}
```

- **A. False**
- B. True

Answer: A

Explanation:

A provider configuration block is not required in every Terraform configuration. A provider configuration block can be omitted if its contents would otherwise be empty. Terraform assumes an empty default configuration for any provider that is not explicitly configured. However, some providers may require some configuration arguments (such as endpoint URLs or cloud regions) before they can be used. A provider's documentation should list which configuration arguments it expects. For providers distributed on the Terraform Registry, versioned documentation is available on each provider's page, via the "Documentation" link in the provider's header. References = [Provider Configuration]

NEW QUESTION # 101

.....

As you know, many exam and tests depend on the skills as well as knowledge, our Terraform-Associate-003 study materials are perfectly and exclusively devised for the exam and can satisfy your demands both. There are free demos of our Terraform-Associate-003 exam questions for your reference with brief catalogue and outlines in them. You can free download the demos of our Terraform-Associate-003 learning prep on the website to check the content and displays easily by just clicking on them.
