Valid CAD Exam Simulator, Pass4sure CAD Dumps Pdf

You can download a free demo of ServiceNow - CAD exam study material at PDFTorrent The free demo of CAD exam product will eliminate doubts about our Certified Application Developer-ServiceNow PDF and practice exams. You should avail this opportunity of CAD exam dumps free demo. It will help you pay money without any doubt in mind. We ensure that our Certified Application Developer-ServiceNow exam questions will meet your Certified Application Developer-ServiceNow test preparation needs. If you remain unsuccessful in the CAD test after using our CAD product, you can ask for a full refund. PDFTorrent will refund you as per the terms and conditions.

Passing the CAD Exam is a significant achievement for developers who work with the ServiceNow platform. Certified Application Developer-ServiceNow certification demonstrates that the developer has the skills and knowledge required to design and develop custom applications on the platform. It also validates that the developer has a deep understanding of the platform's capabilities and can use it to solve complex business problems.

ServiceNow Certified Application Developer-ServiceNow Sample Questions (Q50-Q55):

NEW QUESTION # 50

How does the Application Picker interact with Application Scope in ServiceNow?

- A. Global is a reserved application that does not appear in the Application Picker.
- B. Selecting Global in the Application Picker sets the Application Scope to Incident.
- C. Selecting an application from the Application Picker does not set the Application Scope.
- **D. Selecting an application from the Application Picker sets the Application Scope.**

Answer: D

Explanation:

A). Selecting Global in the Application Picker sets the Application Scope to Incident: This is incorrect. Selecting "Global" sets the scope to the global application, not specifically to the Incident application.

B). Global is a reserved application that does not appear in the Application Picker: This is incorrect. The "Global" application is available in the Application Picker and represents the global scope.

C). Selecting an application from the Application Picker sets the Application Scope: This is correct. Choosing an application from the Application Picker establishes that application's scope as the current context for development and configuration.

D). Selecting an application from the Application Picker does not set the Application Scope: This is incorrect. The Application Picker directly influences the current Application Scope.

For more information, refer to the official ServiceNow documentation on Application Scope.

For a visual demonstration of restricting access to your ServiceNow application, you may find the following video helpful:

Restricting Access to your ServiceNow App

Explanation:

In ServiceNow, the Application Picker is a user interface element that allows developers to select the active application they are working on. The selected application determines the Application Scope, which defines the boundaries within which application artifacts (like tables, scripts, and UI components) reside and operate.

NEW QUESTION # 51

Which of the following methods prints a message on a blue background to the top of the current form by default?

- A. `g_form.showFieldMsg()`
- B. `g_form.showFieldMessage()`
- **C. `g_form.addInfoMessage()`**
- D. `g_form.addInfoMsg()`

Answer: C

Explanation:

From: https://docs.servicenow.com/bundle/paris-application-development/page/script/general-scripting/reference/r_ScriptingAlertInfoAndErrorMsgs.html `g_form.showFieldMsg("field_name", "Hello World", "error");` Puts "Hello World" in an error message **below the specified field**. `g_form.addInfoMessage()` or `g_form.addErrorMessage()` place a blue box message at the top of the screen. Pg 126 of the CAD handbook The method that prints a message on a blue background to the top of the current form by default is `g_form.addInfoMessage()`. The `g_form` object is a global object that provides access to form fields and UI elements on a form. The `addInfoMessage()` method is a method of the `g_form` object that displays an informational message next to the form header. The message has a blue background color by default, unless it is overridden by a CSS style. The `addInfoMessage()` method takes one argument, which is the message text to display. Reference: [ServiceNow Docs - GlideForm (`g_form`) API], [ServiceNow Docs - `g_form.addInfoMessage()`]

NEW QUESTION # 52

How can an application link to a repository behind a firewall?

- **A. Link an application to source control through a MID Server.**
- B. This option is not supported.
- C. Link an application to source control with multi-factor authentication.
- D. Link an application to source control through an access token.

Answer: A

Explanation:

"Use an existing MID Server to connect to a Source Control repository. Linking or importing an application through a MID Server enables access to repositories behind a firewall." https://docs.servicenow.com/bundle/tokyo-application-development/page/build/applications/concept/c_

NEW QUESTION # 53

What is the REST API Explorer used to do?

- A. Convert SOAP Message functions to REST methods
- B. Find resources on the web for learning about REST
- C. Practice using REST to interact with public data providers
- D. Create sample code for sending REST requests to ServiceNow

Answer: D

Explanation:

One of the uses of the ServiceNow REST API Explorer is to create sample code for sending REST requests to ServiceNow. The REST API Explorer is a tool that allows you to discover and test the ServiceNow REST APIs. You can select an API endpoint, set the HTTP method, parameters, headers, and body, and then execute the request. The REST API Explorer will show you the response status, headers, and body, as well as generate sample code for various languages and frameworks, such as cURL, Java, JavaScript, Node.js, Python, Ruby, and more. Reference: [Use the REST API Explorer - Product Documentation: Tokyo - ServiceNow], [Introduction to Scripted REST APIs - ServiceNow Developers]

NEW QUESTION # 54

In a privately-scoped application, which methods are used for logging messages in server-side scripts? (Choose 2 answers)

- A. `gs.debug()`
- B. `gs.error()`
- C. `gs.info()`
- D. `gs.log()`
- E. `gs.logError()`

Answer: C,D

Explanation:

In ServiceNow, the GlideSystem (`gs`) object provides several methods for logging messages in server-side scripts. In a privately-scoped application, the following methods are commonly used:

A. `gs.log()`: This method logs a message to the system log (syslog table). It is a general-purpose logging method that allows developers to record informational messages.

E. `gs.info()`: This method logs informational messages to the system log. It is functionally similar to `gs.log()` but is specifically intended for informational messages.

The other options are not standard methods provided by the GlideSystem object:

B. `gs.error()`: This method does not exist in the GlideSystem API.

C. `gs.debug()`: This method does not exist in the GlideSystem API.

D. `gs.logError()`: This method does not exist in the GlideSystem API.

For more detailed information, refer to the official ServiceNow documentation on the GlideSystem API.

NEW QUESTION # 55

.....

Rather than pretentious help for customers, our after-seals services on our CAD exam questions are authentic and faithful. Many clients cannot stop praising us in this aspect and become regular customer for good on our CAD Study Guide. We have strict criterion to help you with the standard of our CAD training materials. Our company has also being Customer First. So we consider the facts of your interest firstly.
