

Efficient and Convenient Preparation with ActualTestsIT's Updated Veeam VMCE_v12 Exam Questions

BONUS!!! Download part of ActualTestsIT VMCE_v12 dumps for free: <https://drive.google.com/open?id=1tO8YnRIUDKTfLhepFdrkdTgautjlgV2D>

As you may see the data on the website, our sales volumes of our VMCE_v12 exam questions are the highest in the market. You can browse our official websites to check our sales volumes. At the same time, many people pass the exam for the first time under the guidance of our VMCE_v12 Practice Exam. And there is no exaggeration that our pass rate for our VMCE_v12 study guide is 98% to 100% which is proved and tested by our loyal customers.

Veeam VMCE_v12 Exam Syllabus Topics:

Topic	Details
Topic 1	Verifying recoverability: This section of the exam covers the creation of automated tests to ensure recoverability from backups and replicas.
Topic 2	Core components: This section of the exam covers exploring the functionality of Veeam Backup & Replication and system requirements.
Topic 3	Initial security considerations: This section defines ways and tools to secure the Veeam backup server.
Topic 4	Incident Response Planning: This section of the exam covers integrating Veeam Backup and Replication into the incident response strategy.
Topic 5	Risk scenarios: This section covers exploring various risk scenarios and identifying the type of risks we may face in the environment.
Topic 6	Backup data optimizations: This section covers the need for object storage to be backed up and the supported object storage solutions while utilizing repositories.
Topic 7	Data protection strategies: This section of the exam covers an overview of data protection strategies.
Topic 8	Agent backup: This section of the exam covers the identification of protection groups for automating the installation of Veeam Agents.
Topic 9	Unstructured data backup: This section is about highlighting vital features required to protect unstructured data.

Topic 10	Backup copies: This section ensures the process of recoverability and adheres to the 3-2-1 Rule with backup copy processes.
Topic 11	Enacting a recovery: This section is about getting practice in recovering various recoveries with diverse data.
Topic 12	Virtual machine backup: This section of the exam covers protecting the VMware and Hyper V to safeguard VMware that follows SLAs.
Topic 13	Moving or copying backups: This section of the exam covers use cases for backup processes using VeeamMover.
Topic 14	Replication: This section of the exam covers the description of use cases, architectures, and elements of replication jobs.
Topic 15	Veeam Data Platform: This section deals with the identification and description of the goal of each major product in the Veeam Data Platform.
Topic 16	Scale-out Backup Repository: This section of the exam covers the description of the architecture, placement policies, and data tiers.

VMCE_v12 Verified Answers | VMCE_v12 PDF Download

The pass rate is 98.65% for VMCE_v12 learning materials, and if you choose us, we can ensure you that you can pass the exam just one time. In addition, VMCE_v12 exam dumps are edited by skilled experts, who have the professional knowledge for VMCE_v12 exam dumps, therefore the quality and accuracy can be guaranteed. We also pass guarantee and money back guarantee for VMCE_v12 Learning Materials, and if you fail to pass the exam, we will give you full refund, and no other questions will be asked.

Veeam Certified Engineer v12 Sample Questions (Q125-Q130):

NEW QUESTION # 125

An engineer has 3 Veeam Backup servers in 3 different data centers. The engineer needs a way to have centralized licensing and role-based access control. How should the engineer accomplish this with the least effort?

- A. Install the Remote console on a different client
- B. Use the Veeam Web Portal
- C. Create a web portal using REST API
- D. Deploy the Enterprise Manager

Answer: D

Explanation:

Veeam Enterprise Manager provides centralized management for Veeam Backup & Replication environments. It enables the administrator to manage licensing and role-based access control across multiple Veeam Backup servers in different locations, offering a unified control panel with minimal effort compared to other options that would require more complex setups or custom development work.

NEW QUESTION # 126

Veeam Backup & Replication is currently configured to keep backups for 14 days on a NAS repository. An engineer needs to enable GFS with 12 monthly and 5 yearly full backups to extend the retention for archival purposes but does not have enough space on the repository to store them. After adding the repository to Scale-Out-Backup Repository (SOBR) as Performance Tier, which option should the engineer choose to solve this issue?

- A. Add an Object Storage as Capacity tier and set the policy to move backups older than 14 days
- B. Add an Object Storage as Archive tier and set the policy to move all GFS backups
- C. Add another NAS repository as Capacity tier and set the policy to move backups older than 14 days
- D. Add an Object Storage as Capacity tier and set the policy to copy backups to object storage as soon as they are created

Answer: A

Explanation:

To solve the space issue while enabling GFS retention, the engineer should add an Object Storage as a Capacity tier to the Scale-Out Backup Repository (SOBR) and set the policy to move backups that are older than 14 days. This approach allows for efficient use of local NAS storage for short-term retention and leverages object storage for long-term archival purposes.

NEW QUESTION # 127

A virtual machine in your environment has been hit by a virus. You need to restore the virtual machine as fast as possible. At the same time, you need to make sure that any dormant virus on the backed up virtual machine is detected. What restore method should you use when recovering to a new location?

- A. Instant VM Recovery with "staged restore"
- B. SureBackup
- C. Virtual disk restore
- D. Instant VM Recovery with "secure restore"

Answer: D

Explanation:

Reference: https://helpcenter.veeam.com/docs/backup/em/em_disk_restore.html?ver=100

NEW QUESTION # 128

A software development company has deployed the Veeam Data Platform. Recently, developers have been making increasingly frequent requests to have files restored from their VMware VMs. What can be done to reduce strain on the backup team?

- A. Give developers access to Veeam One Business View
- B. Give the developers access to the Enterprise Manager Self-Service File Restore Portal
- C. Outsource developer restore requests to a Managed Service Provider
- D. Give developers access to the Veeam Plug-in for VMware vSphere Client

Answer: B

Explanation:

To alleviate the workload on the backup team while still accommodating the frequent restore requests from developers, the most effective strategy is to empower the developers themselves with the ability to perform file restores. This can be achieved by granting them access to the Enterprise Manager Self-Service File Restore Portal. Veeam Enterprise Manager offers a Self-Service File Restore Portal, which allows users to independently restore files from backups of their VMs without the need for direct intervention by the backup team. This portal is designed with security and ease of use in mind, ensuring that developers can perform restores as needed while adhering to the principle of least privilege, thus reducing the strain on the backup team. This approach aligns with Veeam's emphasis on enhancing operational efficiency and self-service capabilities in data management practices.

NEW QUESTION # 129

Veeam Backup and Replication is currently configured with backup jobs that are targeting a local Backup Repository on a Windows Server.

The backups are now configured to run periodically every 6 hours. The engineer wants to create a secondary copy of the backups. However, due to bandwidth and compute restrictions, the copies must be created and transferred only once a day.

Which option should the engineer choose to achieve this goal?

- A. Configure a Hardened Linux Repository, create a Backup Copy job with Periodic Copy (Pruning) mode to this repository and schedule it to run once a day
- B. Add the repository to a Scale-Out Backup repository, extend it with a Public Cloud Object Storage as Capacity tier in

- C. [Add the repository to a Scale-Out Backup repository, extend it with a Public Cloud Object Storage as Capacity tier in copy mode
- D. Find a Service Provider with Offsite Backup services, create a Backup Copy job with Immediate Copy (Mirroring) mode to the Service Provider repository
