

Efficient DP-300 New Braindumps Book & Leading Offer in Qualification Exams & Free PDF Microsoft Administering Relational Databases on Microsoft Azure

What's more, part of that ExamPrepAway DP-300 dumps now are free: https://drive.google.com/open?id=1C3wiB4SKzLN5s_A28cBRclbB-ptADGlt

Don't be tied up in small things. Don't let your exam affect your regular work. Professionals do professionals. Only spend a little money on Microsoft DP-300 exam braindumps pdf, you will pass exam easily with only 24-36 hours preparation before the real test. Work is important, relax properly is important, Let our DP-300 Exam Braindumps pdf help you clear your exam easily so that you can achieve three things at one stroke. In fact time is money.

Microsoft DP-300 exam is a certification designed for database professionals who want to demonstrate their skills in administering relational databases on Microsoft Azure. Administering Relational Databases on Microsoft Azure certification is ideal for IT professionals who are looking to validate their knowledge and expertise in managing and maintaining databases on the Azure platform. The DP-300 Exam is a great way to showcase your skills and enhance your career prospects.

DP-300 Test Topics Pdf - Preparation DP-300 Store

But with proper planning, firm commitment, and complete DP-300 exam preparation will enable you to make this Microsoft DP-300 easiest. Are you ready to accept this challenge? Looking for a simple, smart, and quick way of completing Microsoft DP-300 Exam Preparation? If your answer is yes then you must try ExamPrepAway DP-300 Questions.

Microsoft Administering Relational Databases on Microsoft Azure Sample Questions (Q249-Q254):

NEW QUESTION # 249

You have a Microsoft SQL Server 2019 database named DB1 that uses the following database-level and instance-level features.

- * Clustered columnstore indexes
- * Automatic tuning
- * Change tracking
- * PolyBase

You plan to migrate DB1 to an Azure SQL database.

What feature should be removed or replaced before DB1 can be migrated?

- A. Clustered columnstore indexes
- B. Automatic tuning
- C. Change tracking
- D. PolyBase

Answer: D

Explanation:

This table lists the key features for PolyBase and the products in which they're available.

Feature	SQL Server (Beginning with 2016)	Azure SQL Database	Azure Synapse Analytics	Parallel Data Warehouse
Query Hadoop data with Transact-SQL	Yes	No	No	Yes
Import data from Hadoop	Yes	No	No	Yes
Export data to Hadoop	Yes	No	No	Yes
Query, import from, export to Azure HDInsight	No	No	No	No
Push down query computations to Hadoop	Yes	No	No	Yes
Import data from Azure Blob storage	Yes	Yes	Yes	Yes
Export data to Azure Blob storage	Yes	No	Yes	Yes
Import data from Azure Data Lake Store	No	No	Yes	No
Export data to Azure Data Lake Store	No	No	Yes	No
Run PolyBase queries from Microsoft R1 tool	Yes	No	Yes	Yes

<https://docs.microsoft.com/en-us/sql/relational-databases/polybase/polybase-versioned-feature-summary>

NEW QUESTION # 250

You have an Azure subscription that contains an Azure SQL database named SQLDb1. SQLDb1 contains a table named Table1.

You plan to deploy an Azure web app named webapp1 that will export rows in Table1 that have changed.

You need to ensure that webapp1 can identify the changes to Table1. The solution must meet the following requirements:

* Minimize compute times.

* Minimize storage.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions

From webapp1, connect to SQLDb1, obtain the initial dataset, and run the CHANGETABLE() function.

Connect to SQLDb1 and run the following Transact-SQL statement.

```
ALTER DATABASE SQLDb1 SET CHANGE_TRACKING = ON
```

From webapp1, connect to SQLDb1, obtain the initial dataset, and run the CHANGE_TRACKING_CURRENT_VERSION() function.

Connect to SQLDb1 and run the following Transact-SQL statement.

```
EXEC sys.sp_cdc_enable_table
```

Connect to SQLDb1 and run the following Transact-SQL statement.

```
EXEC sys.sp_cdc_enable_db
```

Connect to SQLDb1 and run the following Transact-SQL statement.

```
ALTER TABLE dbo.Table1 ENABLE CHANGE_TRACKING
```

Answer Area

Navigation arrows: > <

Answer:

Explanation:

Answer Area

Connect to SQLDb1 and run the following Transact-SQL statement ALTER DATABASE SQLDb1 SET,,,,,

Connect to SQLDb1 and run the following Transact-SQL statement ALTER TABLEdbo,,,,,

From webapp1,connect to,,,,,

- 1 - Connect to SQLDb1 and run the following Transact-SQL statement ALTER DATABASE SQLDb1 SET,,,,,
- 2 - Connect to SQLDb1 and run the following Transact-SQL statement ALTER TABLEdbo,,,,,
- 3 - From webapp1,connect to,,,,,

NEW QUESTION # 251

Your company analyzes images from security cameras and sends alerts to security teams that respond to unusual activity. The solution uses Azure Databricks.

You need to send Apache Spark level events, Spark Structured Streaming metrics, and application metrics to Azure Monitor.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions in the answer area and arrange them in the correct order.

Actions

Deploy Grafana to an Azure virtual machine.

Build a **spark-listeners-loganalytics-1.0-SNAPSHOT.jar** JAR file.

Create Dropwizard counters in the application code.

Create a data source in Azure Monitor.

Configure the Databricks cluster to use the Databricks monitoring library.

Answer Area

Navigation arrows: < > < >

Answer:

Explanation:

Answer Area

Configure your Azure Databricks cluster to use the Databricksmonitoring library.

Build the spark-listeners-loganalytics-1.0-SNAPSHOT.jar JAR file

Create Dropwizard counters in your application code.

- 1 - Configure your Azure Databricks cluster to use the Databricksmonitoring library.
- 2 - Build the spark-listeners-loganalytics-1.0-SNAPSHOT.jar JAR file
- 3 - Create Dropwizard counters in your application code.

NEW QUESTION # 252

You have an Azure SQL database.

You discover that the plan cache is full of compiled plans that were used only once.

You run the select * from sys.database_scoped_configurations Transact-SQL command and receive the results shown in the following table.

configuration_id	name	value	is_value_default
1	LEGACY_CARDINALITY_ESTIMATION	0	1
2	QUERY_OPTIMIZER_HOTFIXES	0	1
3	OPTIMIZE_FOR_AD_HOC_WORKLOADS	0	1
4	ACCELERATED_PLAN_FORCING	1	0

You need relieve the memory pressure.

What should you configure?

- A. ACCELERATED_PLAN_FORCING
- B. LEGACY_CARDINALITY_ESTIMATION
- C. QUERY_OPTIMIZER_HOTFIXES
- D. OPTIMIZE_FOR_AD_HOC_WORKLOADS

Answer: D

Explanation:

OPTIMIZE_FOR_AD_HOC_WORKLOADS = { ON | OFF }

Enables or disables a compiled plan stub to be stored in cache when a batch is compiled for the first time. The default is OFF. Once the database scoped configuration OPTIMIZE_FOR_AD_HOC_WORKLOADS is enabled for a database, a compiled plan stub will be stored in cache when a batch is compiled for the first time. Plan stubs have a smaller memory footprint compared to the size of the full compiled plan.

Reference:

<https://docs.microsoft.com/en-us/sql/t-sql/statements/alter-database-scoped-configuration-transact-sql>

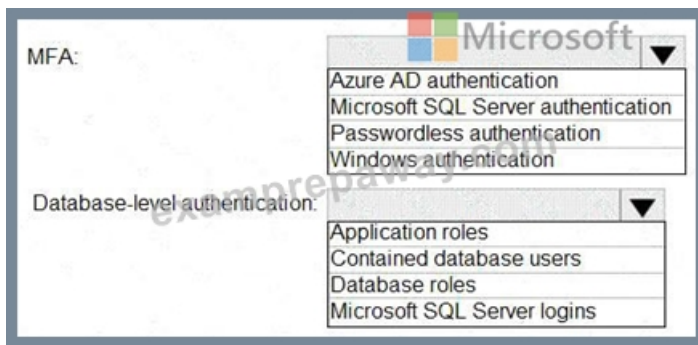

NEW QUESTION # 253

You have an Azure subscription that is linked to a hybrid Azure Active Directory (Azure AD) tenant. The subscription contains an Azure Synapse Analytics SQL pool named Pool1.

You need to recommend an authentication solution for Pool1. The solution must support multi-factor authentication (MFA) and database-level authentication.

Which authentication solution or solutions should you include in the recommendation? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

Box 1: Azure AD authentication

Azure Active Directory authentication supports Multi-Factor authentication through Active Directory Universal Authentication.

Box 2: Contained database users

Azure Active Directory Uses contained database users to authenticate identities at the database level.

Reference:

<https://docs.microsoft.com/en-us/azure/synapse-analytics/sql-data-warehouse/sql-data-warehouse-authentication>

NEW QUESTION # 254

.....

ExamPrepAway provides the most reliable and authentic Administering Relational Databases on Microsoft Azure (DP-300) prep material there is. The 3 kinds of Microsoft DP-300 preparation formats ensure that there are no lacking points in a student when he attempts the actual DP-300 exam. The Administering Relational Databases on Microsoft Azure (DP-300) exam registration fee varies between 100\$ and 1000\$, and a candidate cannot risk wasting his time and money, thus we ensure your success if you study from the updated Microsoft DP-300 practice material. We offer the demo version of the actual Microsoft DP-300 questions so that you may confirm the validity of the product before actually buying it, preventing any sort of regret.
