# Efficient Free OGA-032 Exam Questions & Leading Provider in Qualification Exams & Free Download OGA-032 Certification Test Answers

With the pass rate is 98.65% for OGA-032 learning materials, our product has gained popularity among candidates, the also send some thank letter for helping them pass the exam successfully. We have a professional team to research the latest information for OGA-032 exam materials, and we can ensure that OGA-032 Exam Dumps you receive are the latest one. What's more, OGA-032 exam dumps are high quality, and you can pass the exam just one time. We offer you free update for 365 days after purchasing, and our system will send the update version for OGA-032 exam dumps to you automatically.

The ArchiMate 3 modeling language is a widely accepted standard for enterprise architecture modeling. It provides a comprehensive framework for describing and visualizing complex systems, processes, and relationships within an organization. The Open Group OGA-032 (ArchiMate 3 Part 2) Certification Exam is an essential certification for professionals who want to demonstrate their expertise in using the ArchiMate 3 modeling language to develop effective enterprise architectures.

The Open Group OGA-032 (ArchiMate 3 Part 2) Certification Exam is an essential certification for professionals who work in enterprise architecture and related fields. It validates an individual's knowledge and skills in using the ArchiMate 3 modeling language for enterprise architecture modeling and analysis. Obtaining this certification can provide many benefits, including a competitive edge in the job market and recognition as an expert in enterprise architecture modeling.

>> Free OGA-032 Exam Questions <<

# Quiz OGA-032 - ArchiMate 3 Part 2 Exam — High-quality Free Exam Questions

In order to gain more competitive advantages when you are going for a job interview, more and more people have been longing to get a OGA-032 certification. They think the certification is the embodiment of their ability; they are already convinced that getting a OGA-032 certification can help them look for a better job. There is no doubt that it is very difficult for most people to pass the OGA-032 Exam and have the certification easily. If you are also weighted with the trouble about a OGA-032 certification, we are willing to soothe your trouble and comfort you.

# The Open Group ArchiMate 3 Part 2 Exam Sample Questions (Q10-Q15):

# **NEW QUESTION #10**

Please read this scenario prior to answering the question

The IT Operations (IT Ops) department at ArchiSurance has five core responsibilities, each encompassing a dedicated business process: (1) Batch Operations (Batch Ops), (2) Online Operations (Online Ops), (3) Security Operations (Security Ops), (4) User Support and (5) Continuous Improvement. Service level agreements (SLAs) are in place for Batch Ops and Online Ops, and each Ops process generates monitoring data that is utilized by the Continuous Improvement process.

The System Ops category consists of Batch Ops, Online Ops, and Security Ops, each having an incident management sub-process. These sub-processes are triggered by Batch, Online, and Security Incidents, respectively. In the initial stages of the incident management sub-processes, an Incident Alert is shared with the other System Ops processes by posting it to the Alert Buffer.

Batch Ops relies on a schedule that outlines all batch jobs and their dependencies. This schedule serves two sub-processes: Batch Planning, which updates the schedule for use by the Execution Management sub-process.

The Batch Ops process relies on a suite of interconnected applications to facilitate its operations. Among these applications, the Batch Scheduler plays a vital role by allowing users to manage a comprehensive database of jobs, job schedules, and dependencies. It effectively launches batch jobs according to the information stored in the database.

Working in conjunction with the Batch Scheduler, the Batch Monitor application utilizes the job schedules as a reference point to monitor job execution. It identifies any exceptional conditions that may arise during the execution process. To ensure effective handling of these exceptions, the Batch Monitor communicates the information to both the Batch Scheduler and the Incident Handler applications through the previously mentioned Alert Buffer.

The Incident Handler application operates based on a defined set of business rules. It uses these rules to determine the relevant systems and individuals that need to be notified in the event of each incident.

Subsequently, the Incident Handler

application generates appropriate notifications according to these determinations.

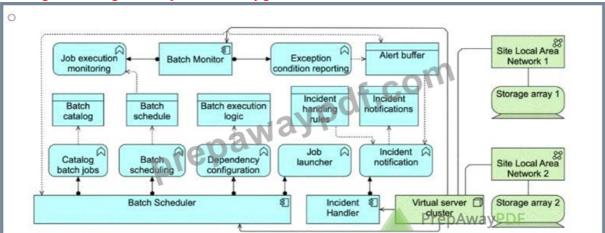

Recognizing the criticality of the Batch Scheduler, Batch Monitor, and Incident Handler applications, ArchiSurance has implemented redundant hosting arrangements across multiple geographically distributed data centers. In each data center, these three applications are supported by fully redundant virtual server clusters. Each cluster is connected to two site local area networks, both of which are further linked to separate storage array hardware devices.

Refer to the scenario

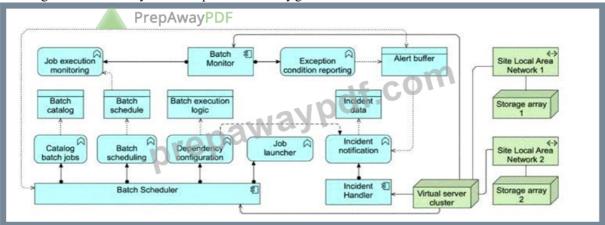

As part of an IT service management initiative, you have been assigned the task to show how applications and technology support the Batch Ops process. This should show the relationships between the applications, their functions, the data they access, and the technology that hosts the applications and data, along with the networks that connect the servers. It is only necessary to model a single data center.

Which of the following answers provides the most complete and accurate model?

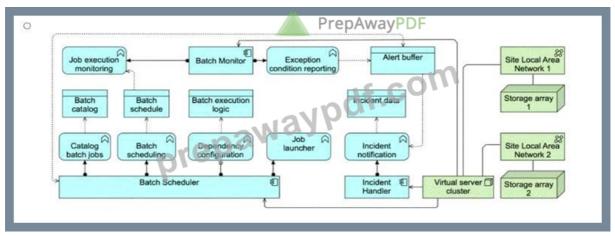

• A. A diagram of a firefighter Description automatically generated

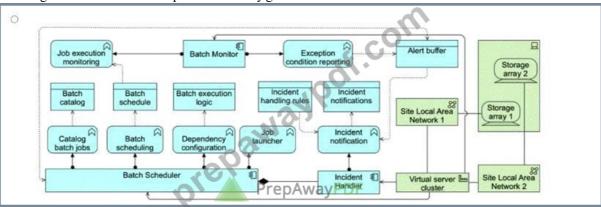

B. A diagram of a software system Description automatically generated with medium confidence

• C. A diagram of a work flow Description automatically generated

D. A diagram of a work flow Description automatically generated

#### Answer: A

# Explanation:

The correct answer is Cas it provides the most complete and accurate model according to the ArchiMate® 3 framework and the given scenario.

Here's why:

- \* Business Processes and Sub-Processes:
- \* Batch Operations (Batch Ops)is one of the core responsibilities in IT Operations, and its processes are modeled clearly. The Batch Scheduleris responsible for managing batch jobs, schedules, and dependencies.
- \* TheBatch Monitoris correctly shown to monitor the job execution and notify exceptions using theAlert Buffer.
- \* The Incident Handleris used to notify relevant systems and individuals, triggered by the incident detection from Batch Monitor. This is modeled by the use of incident handling rules and notifications.
- \* Application Layer (Application Components and Functions):
- \* The Batch Scheduler, Batch Monitor, and Incident Handlerare accurately depicted as the main applications. These applications are crucial for managing job scheduling, monitoring execution, and handling incidents.
- \* These applications share the same virtual server cluster, which is an important detail reflecting redundancy and high availability, which was mentioned in the scenario.
- \* The interrelationships between applications are accurately depicted: the Batch Schedulerlaunches jobs, the Batch Monitorchecks their status, and Incident Handlerdeals with exceptions.
- \* Data Access:
- \* TheBatch Scheduleraccesses and updates batch jobs and schedules, and this is represented clearly.
- \* The Incident data and Incident notifications are accurately modeled as being used by Incident Handler.
- \* Technology Layer:
- \* The Virtual server cluster, Storage arrays, and Site Local Area Networksare appropriately connected to support the application infrastructure.
- \* Redundancy is shown through the use of multiple storage arrays and network connections, as described in the scenario.
- \* Accuracy in Relationship Types (ArchiMate® 3) References:
- \* The relationships between components are modeled using ArchiMate® 3 standards, such as flow relationships between the Batch Monitor and Alert Buffer or between the Incident Handler and storage components.
- \* Triggeringrelationships exist between the applications that manage batch jobs and the monitoring /notification process, ensuring correct job execution and incident handling.

Conclusion: Answer C is the most complete model, as it accurately reflects the roles of the various applications, their interactions, and

the underlying technology components in support of the Batch Ops process, following the guidelines and modeling standards of ArchiMate® 3.

# **NEW QUESTION #11**

Please read this scenario prior to answering the question

ArchiCar is a specialized company that focuses on manufacturing luxury electric cars and powertrain components, along with producing battery-charging equipment. With its own distribution network and showrooms, ArchiCar adopts a direct-to- customer sales model through online channels.

The manufacturing of ArchiCar's electric cars is carried out on fully automated assembly lines. Leveraging a cutting-edge manufacturing process, the company boasts an impressive ability to sell and deliver a vehicle within just one month from the time of order placement. Anticipating significant growth, the CEO has set ambitious plans to increase annual production from 100,000 to 500,000 vehicles within a three-year timeframe.

To ensure the highest quality standards, ArchiCar relies on locally manufactured finished steel from the renowned ArchiMetal plant. ArchiMetal specializes in lightweight steels that allow ArchiCar to achieve a reduced vehicle weight without compromising strength and crash performance. The finished steel is efficiently transported by rail to ArchiCar's production plant, where it is stored in a dedicated warehouse until required for the automated car assembly process. Conveyor belts facilitate the seamless transfer of the finished steel from the warehouse to the assembly plant.

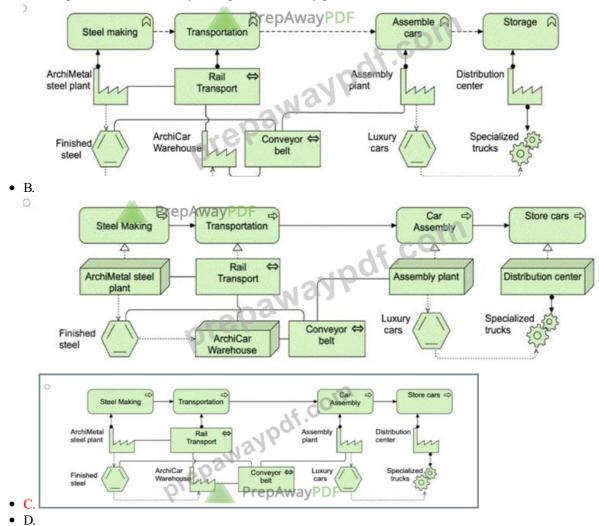

At the ArchiCar assembly plant, an optimized and streamlined assembly process is implemented, resulting in the production of 12 vehicles per hour. Once assembled, the cars are transported to a nearby distribution center using specialized trucks.

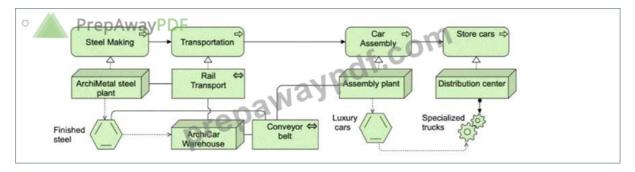

These vehicles are then stored at the distribution center until they are ready for delivery to their eagerly awaiting new owners. Refer to the Scenario

You are a consultant to the CIO. She has asked you to illustrate the end-to-end technology processes at ArchiCar from raw materials to assembled cars ready for delivery.

Which of the following answers provides the best description?

A. A diagram of a vehicle assembly Description automatically generated

#### Answer: C

#### Explanation:

In this scenario, the task is to model theend-to-end technology processesatArchiCar, showing how raw materials (finished steel) are processed through the company's manufacturing, transportation, and distribution system, ultimately resulting in fully assembled cars ready for delivery.

Key ArchiMate® 3.2 Concepts Applied:

- \* Business Processes:
- \* Steel Making: ArchiMetal manufactures finished steel, a key raw material for ArchiCar's production.
- \* Transportation: The finished steel is transported by railfrom the ArchiMetal steel plantto ArchiCar's warehouse.
- \* Storage: The finished steel is stored in the ArchiCar Warehouseuntil it is required for the assembly process.
- \* Car Assembly: The conveyor beltmoves the steel from the warehouse to the assembly plant, where cars are assembled on automated lines.
- \* Transportation (Specialized Trucks). Once assembled, the cars are transported to adistribution centerusing specialized trucks.
- \* Storage (Distribution Center): The finished cars are stored in the distribution center, awaiting delivery to customers.
- \* Application and Technology Components:
- \* Conveyor Belt: The transfer of finished steel between the warehouse and assembly plant is automated via the conveyor belt.
- \* Rail Transport and Specialized Trucks: Rail transport handles the movement of steel, and specialized trucks are used for car transportation to the distribution center.
- \* End-to-End Flow:
- \* The model needs to clearly depict the fullprocess flowfrom the production of steel, through its transportation and storage, to the automated assembly of luxury cars and their eventual transportation to the distribution center.
- \* The relationships between processes (e.g., steel making, transportation, car assembly, and storage) must be clear and follow the logical flow of operations.

Why Option D is Correct:

- \* Option Dprovides a clear and accurate representation of theend-to-end processas described in the scenario.
- \* It begins with thesteel-making processat the ArchiMetal steel plantand follows through with the transportation of the finished steel to the warehouse by rail transport.
- \* The process of moving steel via the conveyor beltfrom the warehouse to the assembly plantfor car manufacturing is clearly depicted.
- \* Once cars are assembled, they are transported to the distribution centerusing specialized trucks and are then stored until delivery, completing the end-to-end flow.
- \* The relationships between processes and supporting components (e.g., conveyor belt, transportation methods) are clearly illustrated, following ArchiMate® standards.

Why Other Options Are Incorrect:

- \* Option Ais incorrect because it misses some key elements of the process. It does not fully clarify the role of thewarehouseor how the finished steel is transported between locations.
- \* Option Bmisrepresents the process flow, particularly the storage and assembly process. The connection between steel production and car assembly is not as clearly illustrated.
- \* Option Calso lacks clarity in how the finished steel is moved from the warehouse to the assembly plant, and it does not accurately capture the flow of transportation and storage after car assembly.

#### Conclusion:

Option Dis the best answer because it provides the most complete and clear description of theend-to-end technology processesat ArchiCar, from raw materials (finished steel) to assembled luxury cars ready for delivery. It aligns well with the scenario and adheres to ArchiMate® 3.2 modeling standards, showing all necessary relationships between business processes and supporting components.

# **NEW QUESTION #12**

Please read this scenario prior to answering the question

ArchiCar has been a market leader in the premium priced luxury car sector for the last decade. Its product leadership strategy has

brought superior products to market, and enabled ArchiCar to achieve premium prices for its cars. This strategy has been widely successful in the past, but recently competitors have been offering comparable products and taking significant market share. The governing board of ArchiCar has identified opportunities in emerging markets where the ArchiCar brand is associated with luxury and high performance products, but is thought to be too expensive for mass-market success.

Based on this assessment, the board has made the decision to setup a subsidiary company to mass-produce affordable cars locally. This will be achieved by focusing on a strategy of operational excellence. Such a strategy is ideal for such markets where customers value cost over other factors.

To facilitate this strategic transformation, the project has been divided into multiple phases within a five-year program. The initial phase, known as "Achieving Operational Excellence," is underway. The engineering team has begun devising an action plan to drive the necessary changes and outlining the technological conditions that must be met. The product architect has identified three current capabilities - industry-leading engineering, high-quality materials sourcing, and cutting-edge focussed R&D - along with their contributions to the new production philosophy.

Moving forward, it has been determined that two out of the three current capabilities require revision.

Materials sourcing needs to be adjusted to meet optimization demands, and R&D targets must align with future goals to enable affordable production.

Additionally, process engineering is introduced as a fourth capability to shift the company's focus from products to a process-oriented approach.

The Enterprise Architecture team has been tasked with migration planning, and identifying keywork packages and deliverables. They have identified two transition states between the current and future scenario. The first transition aims to adjust current capabilities, including revising the R&D approach and procurement strategy. The second transition aims to shift from a product-centric mindset to a process-focused approach and adjust materials sourcing accordingly.

It is important to consider existing

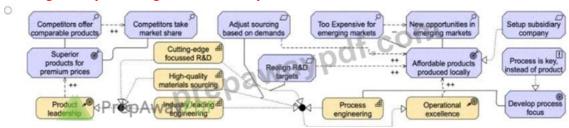

supplier contracts that cannot be immediately canceled during this process.

The Enterprise Architecture team has identified that the second transition must implement a process framework, in order to shift to a process focus and meet a number of requirements, including the requirement for end-to-end process thinking. As this requirement impacts procurement processes, it also impacts the procurement strategy.

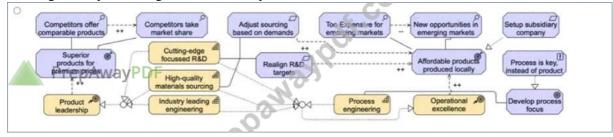

Refer to the Scenario

You have been tasked with modeling the current capabilities of ArchiCar, identifying the capabilities necessary for the company to achieve Operational Excellence, and showing the motivations behind these changes Which of the following models best answers this?

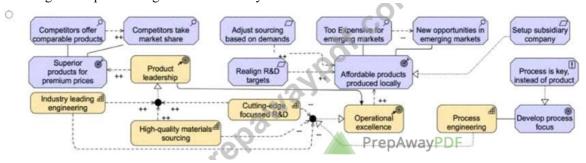

• A. A diagram of a process AI-generated content may be incorrect.

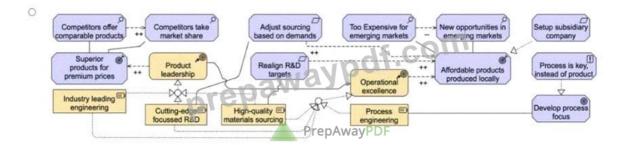

• B. A diagram of a process AI-generated content may be incorrect.

• C. A diagram of a process AI-generated content may be incorrect.

• D. A diagram of a process AI-generated content may be incorrect.

#### Answer: A

# Explanation:

We need to find the model that best represents:

- \* Current Capabilities- Industry-leading engineering, high-quality materials sourcing, and cutting-edge focused R&D.
- \* Strategic Shift- Moving fromproduct leadershiptooperational excellenceto enter emerging markets.
- \* Required Changes-
- \* Adjusting R&D targets to support cost-effective production.
- \* Revisingmaterials sourcingfor optimization.
- \* Introducing process engineering to enable a process-oriented mindset.
- \* Motivations Behind the Changes-
- \* Competitor pressure.
- \* Emerging market opportunities.
- \* High costs limiting mass-market success.

# Why D is the Best Choice:

#Includes all current and future capabilities- Shows the existing strengths ofengineering, R&D, and materials sourcingwhile introducing process engineering as required for operational excellence. #Clearly depicts the shift in strategy- From product leadership to operational excellence and the necessary transformations. #Captures stakeholder concerns and motivations-Including competition, cost concerns, and emerging market opportunities. #Represents dependencies and sequencing correctly-Reflecting how each capability change contributes to the transition states and ultimate business goals.

Why Not A, B, or C?

- \* A:Does not properly represent the transition betweenproduct leadershipandoperational excellence.
- \* B:Fails to clearly define the requiredcapability changesand motivations.
- \* C:Lacks key relationships betweenstrategy shifts and operational changes.

# **NEW QUESTION #13**

Please read this scenario prior to answering the question

The ArchiSurance enterprise document management solution includes a sophisticated ecosystem of applications and technologies. Designed with a strong emphasis on high availability, it plays a vital role in providing support for a diverse range of document types and managing a substantial volume of document-based transactions on a daily basis.

Recognizing its importance to the business, the document management solution is redundantly hosted at two geographically separate data center sites, both configured identically for seamless operations.

The system software at the core of the document management solution is comprised of three key modules.

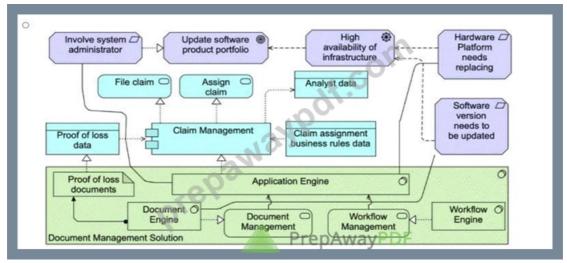

The Document Engine serves as a repository, facilitating document storage, retrieval, and various other operations. The Workflow Engine acts as a host for document management applications, while the Application Engine powers the most advanced and sophisticated applications within the system.

Two key factors have driven the Architecture Board's approval of a project aimed at updating this critical solution. Firstly, the supplier of the Workflow Engine has given notice of the end of support for the current software version, necessitating an upgrade. Secondly, the system administrator responsible for the Application Engine has flagged the need for hardware replacement on the server where the software is currently running. Given that the Claim Management application shares infrastructure with the Application Engine, the involvement of the system administrator responsible for this application is crucial in the project planning and execution.

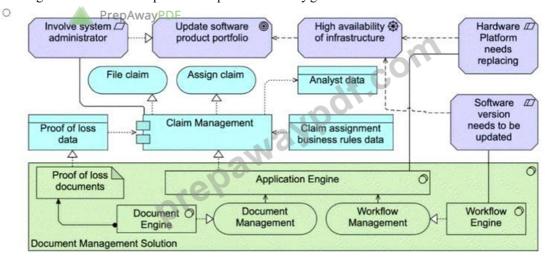

Refer to the Scenario

You are the Enterprise Architect within this organization. You have been assigned the task of modeling the applications and technology for this solution, as well as outlining the motivations driving the need for its update. Based on the scenario, which answer provides the most complete and accurate description?

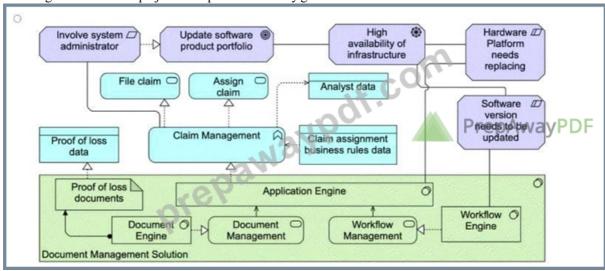

• A. A diagram of software development Description automatically generated

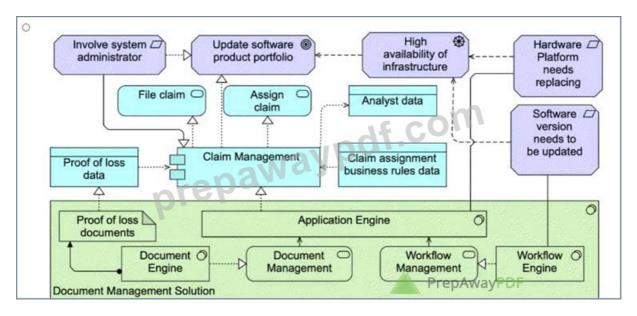

• B. A diagram of software development Description automatically generated

• C. A diagram of a software project Description automatically generated

• D. A diagram of software development Description automatically generated

#### Answer: D

#### Explanation:

This scenario revolves aroundArchiSurance's document management solutionand themotivationsbehind updating the solution due to software and hardware challenges. The task is to model both theapplicationsand technology components involved, along with themotivations driving the need for an update.

Key ArchiMate® 3.2 Concepts Applied:

- \* Applications and Components:
- \* Claim Management Application: This application handles key processes such asfiling claims and assigning claims, and it shares infrastructure with the Application Engine.
- \* Document Management Solution:Includes several subsystems such as:
- \* Document Engine: Manages document storage, retrieval, and processing operations.
- \* Workflow Engine: Facilitates document workflows and supports document-related operations.
- \* Application Engine: Hosts sophisticated applications like Claim Management.
- \* Data Objects:
- \* Proof of Loss DocumentsandProof of Loss Dataare critical components managed by the Document Management Solution. This data is processed and handled by both the Document Engine and the Claim Management application.
- \* Technology and Infrastructure:
- \* Hardware Platform Needs Replacing: The Application Engineruns on hardware that needs replacement. This drives a part of the motivation for updating the infrastructure.
- \* Software Version Needs to Be Updated:TheWorkflow Engine's running on outdated software, necessitating an upgrade to ensure continued support and functionality.
- \* High Availability of Infrastructure: Given that the system is redundantly hosted across two data centers, high availability is crucial for seamless operations. This includes continuous availability for the document management processes.
- \* Motivations and Drivers:
- \* Theend-of-supportnotice from the Workflow Engine supplier requires an upgrade to maintain operational continuity.
- \* The system administrator responsible for the Application Enginehas raised concerns about hardware needing replacement, adding urgency to the infrastructure upgrade.

Why Option D is Correct:

- \* Option Dprovides the most comprehensive representation of the applications, infrastructure, and motivations for updating the solution.
- \* It clearly shows the Claim Management Application and its interaction with the Claim Assignment Business Rules Data, as well as how it relies on the Application Engine.
- \* The Document Management Solution and its subsystems (Document Engine, Workflow Engine, and Application Engine) are correctly depicted, with clear relationships to the data they manage (Proof of Loss Documents and Data).
- \* The motivations for change-specifically, the need toupdate the Workflow Engine softwareand replace thehardware platform-are clearly shown, alongside their impact on the overall system.
- \* The diagram shows the involvement of the system administrator in the update process, which is important for ensuring smooth project execution.

Why Other Options Are Incorrect:

\* Option AandOption Bdo not accurately capture all necessary relationships, particularly the connections between the Claim Management application and its reliance on the Application Engine infrastructure. They also miss some of the drivers related to the

requiredhardware replacement.

\* Option Comits some key details regarding how the Claim Management Application and Document Management Solution components interact with the system, particularly the Claim Assignment Business Rules Data and Proof of Loss Data. Conclusion:

Option Dis the best answer because it offers the most complete and accurate representation of the applications, technology infrastructure, and driversfor the update project. It clearly illustrates how the Claim ManagementandDocument Managementsystems work together, along with the necessary infrastructure updates, in line with ArchiMate® 3.2 modeling standards.

## **NEW QUESTION #14**

Please read this scenario prior to answering the question

The ArchiSurance senior management, board members, customers, and major stockholders have expressed long-standing concerns regarding the business continuity risks associated with relying on a single data center.

# Located in an area prone

to flooding, earthquakes, and occasional water leaks from the cafeteria above, the current data center has significant vulnerabilities. To address these concerns and mitigate the risks, ArchiSurance has developed a comprehensive plan to relocate its existing data center to two separate ready-to-use data centers in different cities. As a major undertaking, the approval of the Board of Directors is required to proceed with the project.

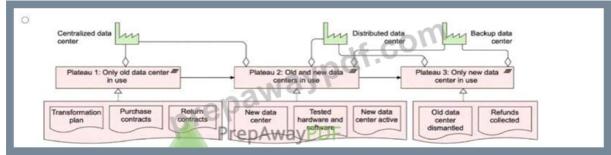

The primary objectives of the data center move are to reduce the risk of business interruptions, reduce both planned and unplanned downtime for critical applications, and provide reassurance to ArchiSurance stakeholders. Ensuring minimal disruption during the transition is crucial. However, several constraints make the planned migration to the new data centers particularly challenging. Certain critical ArchiSurance applications cannot be offline for more than one hour, and any planned downtime must be restricted to specific four-hour windows on weekends. Additionally, the migration cannot take place during quarterly or year-end closing periods to avoid disrupting critical processing operations.

ArchiSurance management has devised a multi-phase data center transformation program to facilitate a smooth transition. Each phase is critical for establishing stable and fully functional data center configurations throughout the transformation process. The initial phase entails detailed scheduling and planning to develop a comprehensive transformation plan aligned with ArchiSurance's timing and scheduling requirements. During the second phase, ArchiSurance will procure the necessary hardware and software for the new data centers, while also seeking refunds for the hardware and software in the current data center once it is decommissioned. The third phase involves setting up the new data centers and conducting parallel testing of the new hardware and software alongside the existing production environment. The transition between the old and new data centers occurs in the fourth phase, followed by the fifth phase, which is the decommissioning of the old data center. This involves returning the hardware and software to obtain the contracted refunds. Each phase, from the second to the fifth, is initiated once specific conditions outlined in the previous phase have been met.

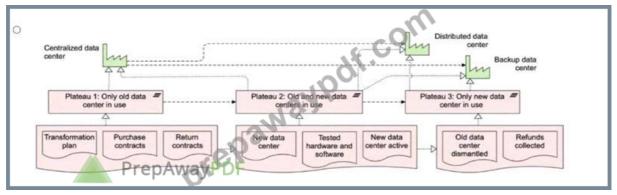

#### Refer to the Scenario

The program manager overseeing the data center transformation has asked you to model an outline of the implementation plan which has three stable states defined. You should show the deliverables associated with each plateau in connection with the physical elements. Additionally, you need to show how each phase contributes to achieving a stable state for the data center transformation. Which of the following answers provides the best description?

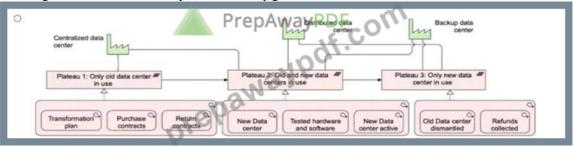

• A. A diagram of a software process Description automatically generated

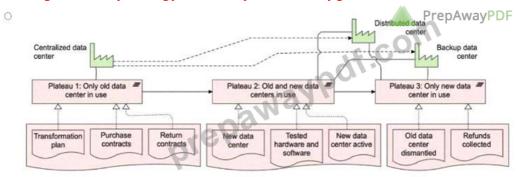

• B. A diagram of a software system Description automatically generated

• C. A diagram of a data center Description automatically generated

• D. A diagram of a data processing process Description automatically generated

# Answer: D

# Explanation:

This question focuses on modeling the implementation plan for the data center transformation at ArchiSurance. The goal is to represent how the different phases of the project contribute to achieving the three stable states, or plateaus, while illustrating the deliverables connected to these plateaus and the physical elements involved.

Key ArchiMate® 3.2 Concepts Applied:

- \* Plateaus:Plateaus representintermediate stable states within an architecture transformation, showing the condition of the architecture at specific moments in time. In this scenario, the plateaus correspond to the stable data center configurations at different phases:
- \* Plateau 1:Only the old data center is in use.
- \* Plateau 2:Both the old and new data centers are in use simultaneously.
- \* Plateau 3:Only the new data center is in use, and the old data center is fully decommissioned.
- \* Physical Elements: These refer to the data centers, hardware, software, and networks that make up the infrastructure being migrated. These should be clearly depicted in connection with each phase of the transformation program.
- \* Deliverables and Phases: Each phase of the transformation process includes specific deliverables, such as:
- \* Procurement of new hardware and software.
- \* Setting up and testing the new data centers.
- \* Transitioning between the old and new data centers.
- \* Dismantling the old data centerand returning its hardware for refunds.
- \* Work Packages and Dependencies: Work packages represent activities or tasks in ArchiMate® and are connected to the plateaus. These must be modeled with proper sequencing, showing how each phase contributes to reaching the next stable state. Why Option A is Correct:
- \* Option Aaccurately represents the three plateaus (stable states) and clearly illustrates the deliverables (e.g., the new data center, tested hardware and software, and dismantled old data center) in relation to each phase of the transformation.
- \* The connections between the physical elements (such as the centralized data center, distributed data center, and backup data center) are properly displayed and aligned with the described multi-phase process.

- \* The phases are laid out logically, showing how each phase (e.g., procurement, testing, transition) leads to the next stable state (plateau), following the principles of aplateauandwork packagetransformation in ArchiMate®.
- \* Theflow of deliverables from one plateau to the next is consistent with the need for dependencies (e.g., the new data center cannot be fully active until the hardware and software have been tested in parallel).

Why Other Options Are Incorrect:

- \* Option BandOption Ddo not show the relationships between the phases and the stable states as clearly asOption A. They lack some critical connections or do not accurately represent the progression between plateaus and the physical infrastructure.
- \* Option Cis closer but misses important sequencing in how the work packages (activities) and plateaus interact, leading to an incomplete representation of the transformation.

Conclusion:

Option A provides the most complete and accurate description based on ArchiMate® 3.2 modeling principles. It correctly demonstrates how each phase of the data center transformation contributes to achieving the stable states (plateaus) and ensures that the physical elements, work packages, and deliverables are properly aligned.

## **NEW QUESTION #15**
