Reliable 156-215.81 Test Labs & Dump 156-215.81 File

Our 156-215.81 study materials boost three versions and they include the PDF version, PC version and the APP online version.

The clients can use any electronic equipment on it. If only the users' equipment can link with the internet they can use their equipment to learn our 156-215.81 study materials. They can use their cellphones, laptops and tablet computers to learn our 156-215.81 study materials. The great advantage of the APP online version is if only the clients use our 156-215.81 Study Materials in the environment with the internet for the first time on any electronic equipment they can use our 156-215.81 study materials offline later. So the clients can carry about their electronic equipment available on their hands and when they want to use them to learn our 156-215.81 study materials they can take them out at any time and learn offline.

CheckPoint Check Point Certified Security Administrator R81 Sample Questions (Q226-Q231):

NEW QUESTION # 226

Which remote Access Solution is clientless?

- A. Endpoint Security Suite
- **B. Mobile Access Portal**
- C. SecuRemote
- D. Checkpoint Mobile

Answer: B

NEW QUESTION # 227

What is the RFC number that act as a best practice guide for NAT?

- A. RFC 1950
- B. RFC 793
- **C. RFC 1918**
- D. RFC 1939

Answer: C

NEW QUESTION # 228

You want to set up a VPN tunnel to a external gateway. You had to make sure that the IKE P2 SA will only be established between two subnets and not all subnets defined in the default VPN domain of your gateway.

- A. In the SmartConsole create a dedicated VPN Community for both Gateways. On the Management add the following line to the \$FWDIR/conf/user.def.FWI file subnet_for_range_and_peer = { <peerGW_IP, first_IP_in_range1,last_IP_in_the_range1; subnet_mask> };
- **B. In the SmartConsole create a dedicated VPN Community for both Gateways. Selecting the local gateway in the Community you can set the VPN Domain to 'User defined' and put in the local network.**
- C. In the SmartConsole create a dedicated VPN Community for both Gateways. On the Gateway add the following line to the \$FWDIR/conf/user.def.FWI file subnet_for_range_and_peer = { <peerGW_IP, first_IP_in_range1,last_IP_in_the_range1;subnet_mask> };
- D. In the SmartConsole create a dedicated VPN Community for both Gateways. Go to Security Policies / Access Control and create an in-line layer rule with source and destination containing the two networks used for the IKE P2 SA. Put the name of the Community in the VPN column.

Answer: B

Explanation:

This answer is correct because this is the recommended way to configure a VPN tunnel between two subnets and not all subnets defined in the default VPN domain of your gateway1. By creating a dedicated VPN Community, you can specify the VPN peers and the encryption settings for the VPN tunnel2. By selecting the local gateway in the Community, you can set the VPN Domain to 'User defined' and put in the local network that you want to include in the VPN tunnel1. This way, you can limit the VPN traffic to the subnets that you want and avoid unnecessary encryption and decryption of other traffic.

The other answers are not correct because they are either outdated or incorrect ways to configure a VPN tunnel between two subnets. Answer A and C are outdated methods that involve editing the user.def file, which is not recommended and can cause problems with the VPN configuration3. Answer D is incorrect because creating an in-line layer rule with source and destination containing the two networks used for the IKE P2 SA will not affect the VPN tunnel establishment, but only the access control

policy4. The VPN column in the rule is used to specify the VPN direction, not the VPN Community name4.

- * How to configure a Site-to-Site VPN with a universal tunnel

NEW QUESTION # 229

The SmartEvent R80 Web application for real-time event monitoring is called:

- **A. SmartView**
- B. SmartEventWeb
- C. There is no Web application for SmartEvent
- D. SmartView Monitor

Answer: A

Explanation:

SmartView is the web application for real-time event monitoring in SmartEvent R80 and above. It provides a unified view of security events across the network and allows for quick investigation and response34.

NEW QUESTION # 230

Which two Identity Awareness commands are used to support identity sharing?

- A. Policy Activation Point (PAP) and Policy Decision Point (PDP)
- B. Policy Enforcement Point (PEP) and Policy Manipulation Point (PMP)
- **C. Policy Decision Point (PDP) and Policy Enforcement Point (PEP)**
- D. Policy Manipulation Point (PMP) and Policy Activation Point (PAP)

Answer: C

Explanation:

Explanation

The answer is A because Identity Awareness commands are used to support identity sharing between Security Gateways. Policy Decision Point (PDP) is the Security Gateway that collects identities from various sources and shares them with other gateways.

Policy Enforcement Point (PEP) is the Security Gateway that enforces the policy based on the identities received from the PDP12
