2025 EMC D-PWF-DY-A-00: Accurate Dell PowerFlex Implementation Achievement Latest Test Simulator

DumpsTorrent regularly updates Dell PowerFlex Implementation Achievement (D-PWF-DY-A-00) practice exam material to ensure that it keeps in line with the test. In the same way, DumpsTorrent provides a free demo before you purchase so that you may know the quality of the Dell PowerFlex Implementation Achievement (D-PWF-DY-A-00) dumps. Similarly, the DumpsTorrent Dell PowerFlex Implementation Achievement (D-PWF-DY-A-00) practice test creates an actual exam scenario on each and every step so that you may be well prepared before your actual Dell PowerFlex Implementation Achievement (D-PWF-DY-A-00) examination time. Hence, it saves you time and money.

EMC Dell PowerFlex Implementation Achievement Sample Questions (Q14-Q19):

NEW QUESTION # 14

Which area in PowerFlex Manager do you go to in order to discover switches?

- A. Resources
- B. Protection
- C. Settings

- D. Lifecycle

Answer: A

Explanation:

The Resources section in PowerFlex Manager is where administrators go to discover and manage physical and virtual infrastructure components, including switches:

* Resources Overview (Option A):

* The Resources area provides a centralized view of hardware and software components, including switches, nodes, and other devices.

* Discovery of switches involves scanning the network to identify switch configurations and integrate them into the PowerFlex environment for monitoring and management.

* Why Not the Other Options?

* Option B: Protection: This area focuses on data protection and backup solutions within PowerFlex, not hardware discovery.

* Option C: Lifecycle: While Lifecycle helps manage the firmware and software updates, it does not handle hardware discovery tasks.

* Option D: Settings: The Settings section is used for configuring PowerFlex Manager itself, such as network settings and system options, not discovering switches.

NEW QUESTION # 15

How many days may a PowerFlex cluster remain in a production environment after deployment before a license is required for continued operation?

- A. 60 days
- B. 30 days
- C. 120 days
- **D. 90 days**

Answer: D

NEW QUESTION # 16

Where are DNS server records configured when deploying the PowerFlex Management Controller VMs?

- A. ifcfg-eth<#>
- B. Routes
- C. Config
- **D. hosts**

Answer: D

Explanation:

When deploying the PowerFlex Management Controller (PFMC) VMs, DNS server records are configured in the hosts file. This step ensures that the PFMC VMs can resolve hostnames for proper communication with other components in the PowerFlex environment. The Dell PowerFlex Deployment Guide explicitly mentions the use of the hosts file for DNS configuration during the deployment process.

* Static Name Resolution: The hosts file provides a simple and reliable way to map hostnames to IP addresses. This is particularly useful during the initial deployment phase when DNS servers may not yet be fully configured or available.

* Ease of Configuration: Modifying the hosts file is straightforward and does not require setting up a full DNS server infrastructure.

* B. Config: The "Config" option is too vague and does not refer to a specific configuration file or location for DNS records.

* C. Routes: Routes are used for defining network paths, not for DNS resolution. They are unrelated to configuring DNS server records.

* D. ifcfg-eth<#>: The ifcfg-eth<#> files are used for configuring network interfaces on Linux systems.

They are not used for DNS server record configuration.

* Dell PowerFlex Deployment Guide (Version 4.x): Specifies the use of the hosts file for DNS configuration during the PFMC deployment process.

* PowerFlex Manager User Guide: Provides instructions for configuring network settings, including DNS resolution, during the deployment of PFMC VMs.

Why the hosts file is used: Why the other options are incorrect: Key References: By following these guidelines, administrators can ensure that the PFMC VMs are properly configured for DNS resolution, enabling seamless communication within the PowerFlex environment.

NEW QUESTION # 17

PowerFlex Management Controller VMs are being deployed. Once the OVAs have been successfully deployed, what should be done before powering them on?

- A. Upgrade the version of VMware Tools.
- B. Add a second SCSI controller to all the PFMC 2.0 nodes.
- C. Add a second vNIC to all the PFMC 2.0 nodes.
- D. Upgrade the VM hardware version.

Answer: C

Explanation:

Before powering on the PowerFlex Management Controller (PFMC) VMs, it is crucial to add a second vNIC (virtual NIC) to enable proper communication and management capabilities:

* Add a Second vNIC to PFMC 2.0 Nodes (Option C):

* The additional vNIC is required to handle the management traffic and ensure proper network segregation for various operations within the PowerFlex environment.

* Without the second vNIC, the management network might not function as intended, potentially causing communication issues between PowerFlex components.

* Why Not the Other Options?

* Option A: Upgrade the VM hardware version: The deployed OVAs are preconfigured with the required hardware version, and upgrading it is unnecessary unless specified by Dell's updated requirements.

* Option B: Add a second SCSI controller: There is no requirement to add a second SCSI controller for PFMC nodes, as storage configurations are pre-defined in the OVA.

* Option D: Upgrade the version of VMware Tools: The OVAs are pre-packaged with a compatible VMware Tools version, and an immediate upgrade is not required before powering on.

NEW QUESTION # 18

Which tool can be used to install the SDR component in a PowerFlex 4.x cluster?

- A. PowerFlex Manager
- B. vSphere Plug-In
- C. PowerFlex WebUI
- D. Installation Manager

Answer: A

Explanation:

The PowerFlex Manager is the tool specifically designed for managing and orchestrating the deployment of components, including SDR (Storage Data Replication), in a PowerFlex 4.x environment.

* Purpose of PowerFlex Manager: PowerFlex Manager simplifies the implementation and lifecycle management of PowerFlex clusters. It includes workflows to install, configure, and upgrade components such as the SDR.

* Why Not the Other Options?

* vSphere Plug-In: This is used for managing and monitoring PowerFlex components within a vSphere environment but doesn't handle SDR installation.

* PowerFlex WebUI: This interface is used for day-to-day cluster management tasks but is not designed to install SDR components.

* Installation Manager: While it can assist with certain components during the setup process, it is not the dedicated tool for SDR installations.

References: Dell PowerFlex documentation specifies the use of PowerFlex Manager for orchestrating SDR installations. Consult the "PowerFlex Manager Deployment Guide" and "PowerFlex 4.x Administration Guide" for further details.
