Fortinet EMEA-Advanced-Support Valid Braindumps Ebook | EMEA-Advanced-Support Exam Flashcards

The Fortinet EMEA-Advanced-Support certification brings multiple career benefits. Reputed firms happily hire you for good jobs when you earn the Fortinet EMEA Advanced Support Exam EMEA-Advanced-Support certificate. If you are already an employee of a tech company, you get promotions and salary hikes upon getting the Fortinet EMEA Advanced Support Exam EMEA-Advanced-Support. All these career benefits come when you crack the Fortinet EMEA Advanced Support Exam EMEA-Advanced-Support Certification examination. To pass the Fortinet EMEA Advanced Support Exam EMEA-Advanced-Support test, you need to prepare well from updated practice material such as real Fortinet EMEA-Advanced-Support Dumps. We guarantee that this study material will prove enough to prepare successfully for the EMEA-Advanced-Support examination.

Fortinet EMEA Advanced Support Exam Sample Questions (Q28-Q33):

NEW QUESTION # 28

What is the purpose of the FortiGate 'diagnose debug flow' command?

- A. To monitor system performance metrics

- B. To display real-time packet captures
- C. To troubleshoot routing table issues
- **D. To show the packet flow through firewall policies**

Answer: D

Explanation:

The 'diagnose debug flow' command in FortiGate is used to troubleshoot how packets are processed through firewall policies, showing details like policy matching, NAT, and session handling. It helps identify why packets are allowed or dropped. Option A refers to packet sniffing, B to routing diagnostics, and D to performance monitoring, none of which are the primary function. Exact extract: "The diagnose debug flow command displays the packet flow through FortiGate, including policy matching, NAT, and session details, useful for troubleshooting traffic issues."

NEW QUESTION # 29

Which of the following protocols operates at Layer 4

- **A. IPSEC**
- B. ARP
- C. BGP
- D. OSPF

Answer: A

Explanation:

IPsec operates at Layer 4 (Transport Layer) in the OSI model, providing secure communication via protocols like ESP and AH, which work with TCP or UDP. BGP and OSPF are Layer 3 (Network Layer) routing protocols, and ARP operates at Layer 2 (Data Link Layer). Fortinet's FortiGate uses IPsec for VPNs at Layer

4. Exact extract: "IPsec operates at the Transport Layer (Layer 4) to secure communications, encapsulating TCP or UDP packets... BGP and OSPF function at the Network Layer, while ARP resolves IP to MAC addresses at the Data Link Layer."

NEW QUESTION # 30

What is the purpose of FortiGate's 'FortiGuard' service in security profiles?

- A. Configures VPN tunnel encryption
- **B. Provides real-time threat intelligence updates**
- C. Enables local storage of security logs
- D. Manages HA cluster synchronization

Answer: B

Explanation:

FortiGuard services provide real-time threat intelligence updates to FortiGate for signatures, URL databases, and anti-malware, enhancing security profiles like IPS and web filtering. It does not handle log storage (B), VPN encryption (C), or HA synchronization (D). Exact extract: "FortiGuard services deliver real-time threat intelligence, updating FortiGate with the latest signatures, URL databases, and anti-malware definitions for security profiles."

NEW QUESTION # 31

What happens when a FortiGate detects a SYN flood attack?

- A. It redirects traffic to a backup gateway
- **B. It applies rate limiting to SYN packets**
- C. It drops all incoming packets
- D. It enables proxy-based inspection

Answer: B

Explanation:

When FortiGate detects a SYN flood attack, it applies rate limiting to SYN packets via a DoS policy, dropping excessive packets

to mitigate the attack. It does not drop all packets (A), enable proxy inspection (B), or redirect traffic (D). Exact extract: "FortiGate mitigates SYN flood attacks using DoS policies, which apply rate limiting to SYN packets to prevent overwhelming the system."

NEW QUESTION # 32

Which of the following are classful addresses? (Select all that apply below)

- A. 172.16.0.0/24
- B. 10.225.30.0/8
- C. 172.16.0.0/16
- D. 10.225.30.0/16

Answer: B,C

Explanation:

Classful addressing follows the original IP address classes: Class A (/8), Class B (/16), and Class C (/24).

Option A (10.225.30.0/8) is a Class A address, and C (172.16.0.0/16) is a Class B address. Option B (10.225.30.0/16) and D (172.16.0.0/24) use non-standard masks for their respective ranges, making them classless (CIDR). The original document incorrectly lists only A. Fortinet routing supports both classful and classless addressing. Exact extract: "Classful addressing uses fixed subnet masks: Class A (/8), Class B (/16), and Class C (/24)... Addresses like 10.0.0.0/8 and 172.16.0.0/16 are classful, while non-standard masks indicate classless addressing."

NEW QUESTION # 33
