Pass Guaranteed 2025 Google First-grade Professional-Cloud-Database-Engineer: Google Cloud Certified - Professional Cloud Database Engineer Latest Exam Guide

We update our Google Professional-Cloud-Database-Engineer exam dumps over time and mark the changes online. Enroll in the Google Professional-Cloud-Database-Engineer exam dumps and start your preparation with Google Professional-Cloud-Database-

Engineer practice questions. We will provide you with the information covered in the current test and incorporate materials that originate from Google Professional-Cloud-Database-Engineer Exam Dumps. You will get a handful of knowledge about topics that will benefit your professional career.

Google Professional-Cloud-Database-Engineer certification exam is designed for professionals who specialize in database management on the Google Cloud Platform. Google Cloud Certified - Professional Cloud Database Engineer certification is ideal for individuals who have experience in designing, developing, and managing cloud-native database solutions. Professional-Cloud-Database-Engineer Exam aims to evaluate the candidate's proficiency in database concepts, cloud-native database services, data security, and data migration.

Google Cloud Certified - Professional Cloud Database Engineer Sample Questions (Q140-Q145):

NEW QUESTION # 140

You are configuring a brand new PostgreSQL database instance in Cloud SQL. Your application team wants to have an optimal and highly available environment with automatic failover to avoid any unplanned outage. What should you do?

- A. Create two read-write Cloud SQL instances in two different regions with a standby instance in another zone.
- B. Create one regional Cloud SQL instance in one zone with a standby instance in another zone in the same region.
- C. Create two read-write Cloud SQL instances in two different zones with a standby instance in another region.
- D. Create one regional Cloud SQL instance with a read replica in another region.

Answer: C

NEW QUESTION # 141

You are using Compute Engine on Google Cloud and your data center to manage a set of MySQL databases in a hybrid configuration. You need to create replicas to scale reads and to offload part of the management operation. What should you do?

- A. Use external server replication.
- B. Use Cloud SQL for MySQL external replica.
- C. Use Data Migration Service.
- D. Use the mysqldump utility and binary logs.

Answer: C

NEW QUESTION # 142

Your organization has a busy transactional Cloud SQL for MySQL instance. Your analytics team needs access to the data so they can build monthly sales reports. You need to provide data access to the analytics team without adversely affecting performance. What should you do?

- A. Enable the `cloudsql.iam_authentication` flag on the primary database instance, and grant read access to required tables to the analytics team.
- B. Create a read replica of the database, enable the `cloudsql.iam_authentication` flag on the replica, and grant read access to required tables to the analytics team.
- C. Create a read replica of the database, provide the database IP address, username, and password to the analytics team, and grant read access to required tables to the team.
- D. Provide the database IP address, username, and password of the primary database instance to the analytics, team, and grant read access to required tables to the team.

Answer: B

Explanation:

"Read replicas do not have the `cloudsql.iam_authentication` flag enabled automatically when it is enabled on the primary instance." https://cloud.google.com/sql/docs/postgres/replication/create-replica#configure_iam_replicas

NEW QUESTION # 143

You are designing a database strategy for a new web application. You plan to start with a small pilot in one country and eventually

expand to millions of users in a global audience. You need to ensure that the application can run 24/7 with minimal downtime for maintenance. What should you do?

- **A. Use Cloud Spanner in a regional configuration.**
- B. Use Cloud SQL with cross-region replicas.
- C. Use highly available Cloud SQL with multiple zones.
- D. Use Cloud Spanner in a multi-region configuration.

Answer: A

Explanation:

<https://docs.google.com/forms/d/e/1FAIpQLSfZ77ZnuUL0NpU-bOtO5QUkC0cnRCe5YKMiubLXwfV3abBqkg/viewform>

NEW QUESTION # 144

You are managing a mission-critical Cloud SQL for PostgreSQL instance. Your application team is running important transactions on the database when another DBA starts an on-demand backup. You want to verify the status of the backup. What should you do?

- A. Check the `cloudsql.googleapis.com/postgres.log` instance log.
- B. Use the Google Cloud Console.
- **C. Perform the `gcloud sql operations list` command.**
- D. Use Cloud Audit Logs to verify the status.

Answer: C

Explanation:

<https://cloud.google.com/sql/docs/postgres/backup-recovery/backups#troubleshooting-backups> Under Troubleshooting: Issue: "You can't see the current operation's status." The Google Cloud console reports only success or failure when the operation is done. It isn't designed to show warnings or other updates. Run the `gcloud sql operations list` command to list all operations for the given Cloud SQL instance.

NEW QUESTION # 145
