

EMT Positive Feedback | Exam EMT Syllabus

P.S. Free 2025 NREMT EMT dumps are available on Google Drive shared by VCE4Dumps: <https://drive.google.com/open?id=1GNsvt42BNWcLszSwNDLxZ-Liue7Moly2>

There are a lot of students that bought VCE4Dumps's NREMT EMT dumps and are satisfied with our services because they passed their EMT on the very first try. We assure you that if you study with our provided Emergency Medical Technicians Exam (EMT) practice questions, you can pass NREMT certifications Exam test in a single attempt, and if you fail to do it, you can claim your money back from us according to terms and conditions.

There are Candidates must know the topics before they start of preparation.

Our **Test Prep EMT Exam Dumps** will include the following topics:

- EMS Operations 12%
- Medical / Obstetrics / Gynecology 28%
- Cardiology and Resuscitation 19%
- Airway, Respiration, and Ventilation 20%
- Trauma 21%

Following are the requirements of Test Prep EMT Exam

Candidates for national emergency medical technician certification must meet the following requirements:

- Have a current CPR-BLS for "healthcare provider" or equivalent credentials.
- The successful parts of the cognitive and psychomotor exam remain valid for 24 months. For candidates whose course completion date is before November 1, 2018, the valid parts of each exam are valid for 12 months. Provided all other entry conditions are met.
- Candidate must have completed the course in the last 2 years & the course director needs to verify the success of the course on the National Registry website.
- Successful completion of a state-approved State Medical Technician (EMT) course that meets or exceeds the National Emergency Medical Service training standards for the emergency technician.
- Pass state-approved cognitive (knowledge) and psychomotor (skills) tests.

Use VCE4Dumps NREMT EMT Desktop Practice Exam Software Without Internet

In the Web-Based NREMT EMT Practice Exam, the Emergency Medical Technicians Exam (EMT) exam dumps given are actual and according to the syllabus of the test. This Emergency Medical Technicians Exam (EMT) practice exam is compatible with all operating systems like Mac, Linux, IOS, Android, and Windows. Likewise, this Emergency Medical Technicians Exam (EMT) practice test is browser-based so it needs no special installation to function properly. Firefox, Chrome, IE, Opera, Safari, and all the major browsers support this Emergency Medical Technicians Exam (EMT) practice exam.

NREMT Emergency Medical Technicians Exam Sample Questions (Q18-Q23):

NEW QUESTION # 18

Which of the following actions are appropriate management for two-rescuer pediatric basic life support? Select the three correct options.

- A. Compress the chest one-half the diameter of the chest
- B. Compress at a rate of 180 per minute
- C. Use the two-thumb-encircling-hands technique for infants
- D. Perform rescue breathing at a rate of 20 per minute
- E. Start CPR if the pulse rate is 72
- F. Perform compressions at a ratio of 15:2

Answer: A,C,F

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

For pediatric BLS with two rescuers, current AHA Guidelines (2020) recommend:

* Two-thumb encircling hands technique: Most effective for infants; provides consistent depth and control.

* Compression ratio of 15:2: Enhances ventilation without compromising perfusion.

* Compression depth: 1/3 of chest or approximately one-half the chest's depth.

CPR begins if pulse <60 bpm with signs of poor perfusion, not at 72 bpm. Rate of 180/min is excessive; ideal rate is 100-120/min.

Pediatric Advanced Life Support (PALS) Guidelines

NEW QUESTION # 19

An 84-year-old patient has a sudden onset of weakness to one side of the body. The patient has a history of hypertension and high cholesterol. The vital signs are BP 176/94 mmHg, P 108/min, R 18/min, and SpO₂ 97% on room air. For which of the following additional symptoms should the EMT assess? Select the three correct options.

- A. Arm drift
- B. Miosis
- C. Tremors
- D. Syncopal episodes
- E. Slurred speech
- F. Facial droop

Answer: A,E,F

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

The symptoms described are classic for a stroke (CVA). Additional hallmark findings include:

* Arm drift (motor weakness or hemiparesis)

* Facial droop (Cranial nerve VII involvement)

* Slurred speech (dysarthria or aphasia)

These form the basis of prehospital stroke assessment tools like FAST:

* Face drooping

* Arm weakness

* Speech difficulty

* Time to call 911

Miosis (pupil constriction) and tremors are not associated with stroke in EMS context. Syncope is an isolated event and not a

reliable CVA symptom.

NEW QUESTION # 20

A patient is having an asthmatic attack. The EMT receives orders from medical control to assist with the patient's inhaler. What are the expected side effects of this medication? Select the three correct options.

- A. Hypotension
- B. Nervousness
- C. Coughing
- D. Drowsiness
- E. Confusion
- F. Tachycardia

Answer: B,C,F

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Albuterol, a common beta-2 adrenergic agonist used in inhalers, stimulates bronchial smooth muscle relaxation. However, stimulation of beta receptors can also produce systemic effects such as:

* Tachycardia (due to beta-1 cross-reactivity)

* Nervousness (from central stimulation)

* Coughing (a local airway response)

Confusion and drowsiness are not typical side effects of beta-agonists. Hypotension is rare unless severe overdose occurs.

NEW QUESTION # 21

A 10-year-old patient is in hypovolemic shock. Which of the following signs would be early indicators of shock for this patient? Select the three correct options.

- A. Capillary refill
- B. Respiratory rate
- C. Blood glucose level
- D. SpO₂
- E. Blood pressure
- F. Heart rate

Answer: A,B,F

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Children compensate for shock through increased heart rate, respiratory rate, and vasoconstriction, which delays blood pressure drop.

Therefore:

* Tachycardia is often the first sign

* Prolonged capillary refill (>2 seconds) is an early indicator

* Tachypnea supports perfusion

Blood pressure is a late sign in pediatric shock. SpO₂ is helpful but does not specifically indicate shock. Blood glucose may be abnormal in other metabolic conditions but is not an early marker of volume loss.

NEW QUESTION # 22

What components are necessary to maintain adequate perfusion? Select the three correct options.

- A. High alveolar pressure
- B. Low ventilation-perfusion ratio
- C. Intact microcirculation
- D. Sufficient blood volume
- E. Patent airway
- F. Hypoxic drive

Answer: C,D,E

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Perfusion refers to delivery of oxygen and nutrients to tissues. It depends on three essential components:

* Patent airway: Ensures oxygen reaches lungs

* Intact microcirculation: Capillary-level exchange must function

* Sufficient blood volume: Maintains blood pressure and oxygen transport Hypoxic drive relates to COPD physiology, not perfusion. High alveolar pressure (like from CPAP) may impede venous return, and allow ventilation-perfusion mismatch means poor oxygenation efficiency, which negatively affects perfusion.
