18. Frage

The project team wants to use the Customer Acquisition Management application to set up and automate the customer enrollment and selling of utility products, services and offers to new customers A concern is raised about the final UI layout, which needs to be adapted to the branding of the company.

What two processes can modify the look and feel of the application?

- A. Modify the VEELogoCard FlexCard to change the customer logo.
- B. Modify the application Page Layout to change/add/remove selected elements
- C. Modify the VEEDigitalOrder Omniscrypt to adapt the look and feel to suit the company's requirements
- D. Modify the VEEConsumerLandingScfeen FlexCard to change the background color, text font size, and style.

Antwort: C,D

Begründung:

In the Salesforce Energy and Utilities Cloud, customizing the UI to align with company branding during the customer acquisition process is crucial for maintaining a consistent user experience. Modifying the VEEDigitalOrder Omniscrypt allows for detailed customization of the customer journey and interaction points within the application, aligning it with the company's branding requirements. Additionally, altering the VEEConsumerLandingScreen FlexCard provides the capability to adjust visual elements such as background color, text font size, and style directly, ensuring the interface reflects the company's visual identity effectively.

Reference = These customization processes are supported by Salesforce Energy and Utilities Cloud documentation, specifically in sections related to Omniscrypt and FlexCard configurations for enhancing user interfaces in utility applications.

19. Frage

An energy company is building a Customer 360 view for its call center agents. They start with the Energy and Utilities Cloud Contact Center Console but need to make modifications.

Which tools are primarily used to create and modify this console?

- A. Industries CPQ: Opportunity, Quote, and Order Management
- B. OmpiStudio: OmniScript, FlexCards, DataRaptors, and Integration Procedures
- C. Custom Code: Lightning Web Components (LWC), Apex, and Visual Force pages
- D. Platform: Flows, Visual Force, Lightning Components, and Apex

Antwort: B

20. Frage

An energy and utility company relies on a third-party pricing application for multi-site quotes. The utility company wants Salesforce to manage the multi-site quotation process and continue to use the third-party pricing application.

How can the utility company meet these requests using Energy and Utilities Cloud?

- A. Only CPQ pricing is available; requesting pricing for a master Quote or Order from an external source is not available,
- B. Duplicate the third-party pricing application prices into the Salesforce Price list.
- C. Install the "Third Party Pricing Application" DataPack from the Process Library.
- D. Use the external pricing feature to send and receive pricing requests from an external pricing engine.

Antwort: D

21. Frage

What tool should be used to migrate configurations from sandbox to production when a customer has completed configuring OmniStudio components?

- A. IDX Workbench
- **B. OmniStudio DataPacks**
- C. DataLoader.io
- D. Salesforce Export Wizard

Antwort: B

Begründung:

When migrating configurations, especially those related to OmniStudio components from a sandbox to production environment in Salesforce, OmniStudio DataPacks are the recommended tool. OmniStudio DataPacks, part of the Salesforce DevOps toolkit, allow for the bundling and deployment of complex configurations and metadata associated with OmniStudio components. This tool is specifically designed to handle the intricate dependencies and settings of OmniStudio components, ensuring a seamless and error-free migration process. References=Salesforce documentation on OmniStudio deployment and migration strategies emphasizes the use of OmniStudio DataPacks for effective configuration migrations. This is outlined in the Salesforce OmniStudio Developer Guide, which provides detailed instructions on using DataPacks for deploying OmniStudio solutions:<https://developer.salesforce.com/docs/atlas.en-us.omnistudio.meta/omnistudio/>

22. Frage

An energy company has implemented Energy and Utilities Cloud in its call center, and they're now considering extending Salesforce for their customer self-service portal.

What value would the Energy and Utilities Cloud Communities license provide compared to standard Salesforce Communities?

- A. Energy and Utilities Cloud includes a self-service portal built on communities that cannot be further modified to make implementations simple and easy
- B. Energy and Utilities Cloud provides the same data model and tools as the call center to build the self-service portal, but the components used in the call center cannot be reused
- C. Energy and utilities Cloud for Communities comes with a set of customizations that would otherwise have to be created through Apex
- **D. Energy and utilities Cloud extends the data model, user interfaces, integrations, and processes used in the call center to the self-service communities' website**

Antwort: D

Begründung:

The Energy and Utilities Cloud Communities license provides significant value by extending the same data model, user interfaces, integrations, and processes used in the call center to the self-service portal built with Salesforce Communities. This ensures a consistent and integrated experience across customer service touchpoints, enabling customers to access personalized services, manage their accounts, and interact with the utility provider through a self-service portal that mirrors the functionality available to call center agents. References= Salesforce Energy and Utilities Cloud documentation on community portals and self-service highlights the ability to extend call center capabilities to customer self-service platforms, providing a cohesive and efficient customer experience:<https://www.salesforce.com/products/community-cloud/industries/energy-utilities/>
