Moreover, our understanding of the importance of information technology has reached a new level. Efforts have been made in our experts to help our candidates successfully pass ChromeOS-Administrator exam. Seldom dose the e-market have an authorized study materials for reference.

Google Professional ChromeOS Administrator Exam Sample Questions (Q22-

Q27):

NEW QUESTION # 22

As an administrator, you would like the ability to see and test upcoming changes to the Google Admin console. How would an admin get access to pre-release features and upcoming ChromeOS device management changes to the Admin console?

- A. Join the Chrome Enterprise BETA Testing
- B. Enroll in the ChromeOS Factory Software Platform
- C. Create a ChromeQS Developer Account
- D. Register for the Chrome Enterprise Trusted Tester Program

Answer: D

Explanation:

The Chrome Enterprise Trusted Tester Program is designed for administrators who want early access to pre-release features and changes in the Google Admin console, including those related to ChromeOS device management. By joining this program, administrators can:

- * Test New Features: Get hands-on experience with upcoming features and changes before they are officially released.
- * Provide Feedback: Share feedback directly with Google's product teams, helping to shape the development and prioritization of new functionalities.
- * Stay Ahead: Be among the first to know about new capabilities and improvements in the Google Admin console.

How to Register:

- * Visit the Chrome Enterprise Trusted Tester Program website: <https://inthecloud.withgoogle.com/trusted-testers/sign-up.html>
- * Fill out the registration form with your organization's details.

* Google will review your application and, if approved, provide you with access to pre-release features.

NEW QUESTION # 23

How do you validate Chrome policies on a managed device?

- A. In the browser, go to policy://chrome to confirm that the device is receiving both user and device policy
- B. Download device logs
- C. In the browser, go to chrome://policy to confirm that the device is receiving both user and device policy
- D. Go to the admin console and look up the policies

Answer: C

Explanation:

To check which policies are applied to a ChromeOS device, navigate to chrome://policy in the Chrome browser. This page displays a list of all policies applied to the device, including both user-specific and device-specific policies. This is the most accurate way to verify that the device is receiving the correct policies from the Google Admin console.

Verified Answer from Official Source:

The correct answer is verified from the Google Chrome Enterprise Policy Guide, which recommends using the chrome://policy URL to review current policy settings on a device.

"To see the policies applied to a ChromeOS device, open Chrome and go to chrome://policy. This page lists both user and device policies that are currently enforced." This method allows administrators to validate the application of policies directly on the device, confirming that updates from the Admin console have been successfully applied.

Objectives:

- * Validate policy application on managed ChromeOS devices.
- * Use chrome://policy to troubleshoot policy issues.

NEW QUESTION # 24

You're the lead for the technology department and you're working with your teammate on a hardware refresh in the upcoming year. A major part of the refresh is to consider ChromeOS devices for the majority of the users in the company. What are some organization level objectives you should consider during this hardware refresh in regard to ChromeOS?

- A. ChromeOS allows for advanced security flexible access, and simplified orchestration within the business
- B. ChromeOS integration with current technological standards and practices can be worked on with trusted Google partners
- C. Verifying If all the terms and conditions in the Chrome Online Agreement are applicable to ChromeOS
- D. ChromeOS will need a rollout and execution plan commensurate with hardware supply availability

Answer: A

Explanation:

When considering a hardware refresh with ChromeOS devices, organizational-level objectives should focus on the strategic advantages that ChromeOS brings to the business:

- * Advanced Security: ChromeOS is known for its robust security features, including sandboxing, verified boot, automatic updates, and data encryption. These can significantly reduce the risk of malware infections and data breaches.
- * Flexible Access: ChromeOS devices support cloud-based applications and services, enabling employees to work from anywhere with an internet connection. This flexibility enhances productivity and collaboration.
- * Simplified Orchestration: ChromeOS devices are centrally managed through the Google Admin console, simplifying device deployment, configuration, and updates. This reduces IT overhead and streamlines device management processes.

Option A is relevant but not a primary organizational objective. While partner collaboration can be beneficial, the focus should be on how ChromeOS directly improves the organization's operations.

Option B is incorrect because verifying the terms of the Chrome Online Agreement is a legal requirement, not a strategic objective. Option D is relevant but not as impactful as the other objectives. While a rollout plan is necessary, the focus should be on the long-term benefits of ChromeOS for the organization.

NEW QUESTION # 25

The security team is requiring Wi-Fi connectivity to be disabled on ChromeOS devices. Using the Google Admin console, how would you configure ChromeOS devices to block all Wi-Fi connectivity and hide the Wi-Fi Icon?

- A. Remove Wi-Fi from "Enabled network interfaces "
- B. Prevent WiMax connectivity
- C. Restrict 'Auto Connecting' to Wi-Fi
- D. Configure "Restricted Wi-Fi Networks "

Answer: A

Explanation:

To completely disable Wi-Fi and hide the Wi-Fi icon on ChromeOS devices, you need to modify the "Network" settings in the Google Admin console:

- * Go to "Device Management" > "Chrome Management" > "Device Settings".
- * Select the organizational unit (OU) containing the devices you want to manage.
- * Under "Network", find "Enabled network interfaces" and remove "Wi-Fi" from the list.
- * Save the changes.

This will disable Wi-Fi adapters on the devices and hide the Wi-Fi icon, preventing users from connecting to Wi-Fi networks.

Why other options are incorrect:

- * A. Restricted Wi-Fi Networks: This setting only limits which networks users can connect to, not disable Wi-Fi entirely.
- * B. Prevent WiMax connectivity: WiMax is a different wireless technology and not relevant to Wi-Fi.
- * D. Restrict 'Auto Connecting' to Wi-Fi: This only prevents automatic connection to networks but doesn't disable Wi-Fi entirely.

NEW QUESTION # 26

You're in charge of deploying video conferencing equipment and it has been decided that you will leverage ChromeOS devices. What initial considerations should you make when deciding on devices?

- A. A precise time window on how to apply security patches and updates to all devices
- B. Deploying instructional guides to all users on setup configuration, and use of new equipment
- C. A form factor compatible for both remote and site workers is required
- D. Devices must have 8GB of RAM and obey supported processor models

Answer: C

NEW QUESTION # 27
