New Pdf EAEP2201 Torrent 100% Pass | High Pass-Rate EAEP2201: Enterprise Administration Professional 2201 100% Pass

Our EAEP2201 practice engine with passing rate up to 98 percent can build a surely system to elude any kind of loss of you and help you harvest success effortlessly. We are in dire to help you conquer any questions about EAEP2201 training materials emerging during your review. If you want to be accepted as an indispensable member in your working condition, and obliterate opponents from a great distance, start by using our EAEP2201 Exam Prep to pass the EAEP2201 exam now.

Esri Enterprise Administration Professional 2201 Sample Questions (Q53-Q58):

NEW QUESTION # 53

A GIS administrator works for the Department of Transportation. Users need to analyze decades of traffic and crash data to determine the interstates with the most incidents. They will also analyze when certain vehicles were speeding and braking, and then correlate this data with vehicular accident locations.

Which server must be configured to support this workflow?

- A. Notebook Server
- B. GeoAnalytics Server
- C. GeoEvent Server

Answer: C

NEW QUESTION # 54

An ArcGIS analyst is curating a series of basemaps for field crews editing utility infrastructure in the field. The analyst must ensure optimal performance. Which type of service should be published?

- **A. Vector tile service**
- B. Dynamic map service
- C. Cached map service

Answer: A

Explanation:

For field operations, Vector Tile Services are highly efficient and suitable for basemaps. They offer fast rendering, smaller file sizes, and are easily scalable across various devices, including those with limited bandwidth or processing capabilities. Vector tiles also support dynamic styling and are ideal for offline use, which is often necessary for field crews working in areas with limited connectivity.

Cached map services (Option A) are raster-based and can be larger in size, making them less optimal for mobile use. Dynamic map services (Option C) require real-time data rendering, which can be resource-intensive and may not perform well in field conditions with limited connectivity.

Reference Source: ArcGIS Enterprise documentation on customizing basemaps

NEW QUESTION # 55

A GIS administrator must automate certain data workflows and administrative tasks in ArcGIS Enterprise.

The administrator must meet several requirements:

- * The processes and methods must be well and thoroughly documented
 - * An option must be provided to modify the processes on the fly
 - * Scripts and processes must be shared to different individuals throughout the ArcGIS Enterprise organization
- Which ArcGIS Server role should be used to meet these requirements?

- A. ArcGIS Notebook Server
- **B. ArcGIS Workflow Manager Server**
- C. ArcGIS GeoEvent Server

Answer: B

NEW QUESTION # 56

After upgrading, a GIS administrator tries to log in to Portal for ArcGIS using admin credentials. The portal site doesn't display correctly and an error is shown. Login fails.

What should the administrator do?

- A. Reinstall the ArcGIS Web Adaptor
- B. Run portalscan.py
- **C. Clear the browser's cache**
- D. Roll back the upgrade

Answer: C

Explanation:

After an upgrade, Portal for ArcGIS often changes web elements, scripts, and cached content. If the browser is using old cached files, the portal page may not render correctly, and authentication may fail. Clearing the browser cache ensures that new files are loaded.

From Esri documentation:

"After upgrading ArcGIS Enterprise, clear the browser's cache to ensure that all updated components and scripts are loaded properly."

* Option A is a diagnostic tool, not a fix.

* Option B may be excessive if the issue is simply browser cache.

* Option D is not a standard troubleshooting step.

NEW QUESTION # 57

A portal administrator is trying to enable web-tier authentication (IWA) for the ArcGIS Enterprise portal using Active Directory and IIS.

Steps taken:

- * Configured portal with Microsoft version of ArcGIS Web Adaptor
- * Set identity store to Active Directory
- * Added AD users to the portal
- * Disabled anonymous access in Portal

Users are not prompted to sign in and are not automatically logged in.

What should the administrator do next?

- A. Assign a default user type to all portal members
- B. Enable Windows Authentication in IIS
- C. Refresh user membership in the Portal Administrator Directory
- D. Work with the IT department to disable anonymous access to the IIS web server

Answer: D

Explanation:

When using IWA through the Web Adaptor (IIS), the IIS server itself must be configured to deny anonymous access and allow Windows Authentication. Simply disabling anonymous access within the Portal settings is not enough.

From Esri's web-tier authentication guide:

"For IWA to function as expected, anonymous access must be disabled in IIS for the ArcGIS Web Adaptor, and Windows Authentication must be enabled. If IIS still allows anonymous access, users will bypass authentication prompts."

* Option B is irrelevant here—user types don't affect login behavior.

* Option C is a content sync feature, not related to authentication.

* Option D (Enable Windows Authentication) is correct only if it hasn't already been done, but the missing step is disabling anonymous access in IIS.
