Esri EAEP2201 New Exam Camp - Valid EAEP2201 Exam Answers

In fact, in real life, we often use performance of high and low to measure a person's level of high or low, when we choose to find a good job, there is important to get the EAEP2201 certification as you can. Our society needs to various comprehensive talents, rather than a man only know the book knowledge but not understand the applied to real bookworm, therefore, we need to get the EAEP2201 Certification, obtain the corresponding certifications. What a wonderful news it is for everyone who wants to pass the

certification exams. There is a fabulous product to prompt the efficiency--the EAEP2201 exam prep, as far as concerned, it can bring you high quality learning platform to pass the variety of exams.

The EAEP2201 exam covers a wide range of topics related to enterprise GIS administration, including system architecture, security, data management, and performance tuning. EAEP2201 exam is designed to test the candidate's knowledge and skills in managing and administering enterprise GIS systems using Esri's ArcGIS platform. EAEP2201 Exam consists of multiple-choice questions and practical exercises that assess the candidate's ability to apply their knowledge to real-world scenarios.

Esri Enterprise Administration Professional 2201 Sample Questions (Q14-Q19):

NEW QUESTION # 14
A GIS administrator must configure ArcGIS Server so that only specific groups and roles from the identity store can administer it. Which action should the administrator perform?

- A. Configure role-based access through the ArcGIS Server Manager
- B. Define the shared key used to generate an ArcGIS token
- C. Use a group-managed service account to administer the server
- D. Disable the primary administrator account

Answer: D

Explanation:
The primary site administrator account in ArcGIS Server is a built-in account that bypasses external identity store configurations. To ensure only users from a configured identity store (e.g., Active Directory) can administer the site, the primary site admin account must be disabled after alternative administrative access has been confirmed.
From ArcGIS Server documentation:
"After you configure your ArcGIS Server to use users and roles from an identity store (LDAP or Active Directory), you can disable the primary site administrator account to prevent bypassing the identity store."
* Option B relates to token security, not access control.
* Option C is about running the service securely, not defining user permissions.
Reference: ArcGIS Enterprise - Managing Access Using Identity Stores and Disabling the Primary Site Administrator Account

NEW QUESTION # 15
An ArcGIS administrator executes a script to silently upgrade all components of ArcGIS Enterprise version
10.6.1 to version 10.9.1. The upgrade completes without logging any errors.
When the administrator logs in, the following message appears: "Members in your organization were assigned the Standard (Temporary) or Lite (Temporary) user types. No users can log in to the Portal." What is causing these issues?

- A. The Portal for ArcGIS upgrade process requires a restart of the Portal for ArcGIS service when adding additional user types.
- B. The organization has level 2 members and the new license file used for the upgrade now has more than one compatible user type.
- C. The portal has no internet access, and the Software Authorization Wizard could not connect to Esri to validate the new license file.

Answer: B

Explanation:
During the upgrade from ArcGIS Enterprise 10.6.1 to 10.9.1, user type licensing is enforced. If the new license file includes more than one compatible user type (e.g., Creator and GIS Professional), existing members without a specified user type may be assigned temporary user types like "Standard (Temporary)" or
"Lite (Temporary)." These temporary assignments prevent users from logging in until valid user types are manually assigned.
This issue is not related to internet access (Option B) or the need to restart services (Option C).
Reference Source: ArcGIS Enterprise documentation on user type licensing during upgrades

NEW QUESTION # 16
A new user is added to the organization and can see roads, building footprints, parcels, and traffic data shared with them in Portal for

ArcGIS. However, the usercannot use analysis toolsin the portal, even though the SpatialAnalysisToolsservice is verifiedto be running.
What is causing this issue?

- A. SpatialAnalysisTools needs to be restarted
- B. The service needs to be published as a hosted layer
- C. The hosting server has not been configured
- D. The new user is a Creator user type

Answer: C

Explanation:
Even if the SpatialAnalysisTools geoprocessing service is running,analysis tools in Portal for ArcGIS will not be availableunless ahosting serveris configured. Thehosting server provides the portal with required processing capabilities, including the ability tocreate hosted feature layersand perform spatial analysis.
From ArcGIS documentation:
"Portal for ArcGIS requires a hosting server to run analysis tools and publish hosted feature layers. Without a hosting server, the analysis tools will be unavailable, even if the geoprocessing services are running."
* OptionAis incorrect: theCreator user type does support spatial analysis, assuming privileges are assigned.
* OptionCis a distraction; the service is already confirmed running.
Reference:ArcGIS Enterprise -Configuring a Hosting Server for Portal Analysis Tools

NEW QUESTION # 17
Users are reportingservice timeouts and performance issues. The administrator notices thatonly the minimum number of instances are runningduring performance spikes. They want tomonitor usage trends before adjusting instance settings.
Which action should the administrator perform?

- A. Change the log level to Debug in ArcGIS Server Manager
- B. Enable Windows Performance Monitor
- C. Monitor Task Manager on each ArcGIS Server machine
- D. Create a report of server statistics in ArcGIS Server Manager

Answer: D

Explanation:
To monitorusage patterns, including the number of requests and instances in use, ArcGIS Server provides statistics reportsin Server Manager. These reports showpeak and average service usage, helping administrators decide how toscale service instance counts.
From ArcGIS Server documentation:
"Use the ArcGIS Server Manager statistics reporting tool to monitor service usage trends over time. This data helps inform adjustments to instance counts."
* OptionAgives only raw system metrics, not service-specific insights.
* OptionB(Debug logs) causes overhead and isn't appropriate for monitoring trends.
Reference:ArcGIS Server -Monitoring and Reporting Service Usage Statistics

NEW QUESTION # 18
An organization must publish hosted feature layers and hosted scene layers to its ArcGIS Enterprise portal.
The GIS administrator takes the following steps to enable this functionality:
* Federates a GIS Server with the portal
* Registers an ArcGIS Data Store relational data store with the GIS Server Which action should the administrator perform next?

- A. Publish a hosted feature layer to test the deployment's functionality
- B. Set the GIS Server as the hosting server in the ArcGIS Enterprise portal
- C. Register an ArcGIS Data Store tile cache data store with the GIS Server

Answer: B

Explanation:
After federating a GIS Server with the portal and registering a relational data store, the next step is to designate the GIS Server as thehosting serverin the ArcGIS Enterprise portal. This configuration enables the portal to support the publishing of hosted feature

layers and hosted scene layers. The hosting server must have both a relational data store and a tile cache data store configured to support these functionalities.

Reference Source:ArcGIS Enterprise documentation on configuring a hosting server
