

Esri EAPA_2025 Exam Dumps For Ultimate Success 2025

What's more, part of that TestkingPass EAPA_2025 dumps now are free: <https://drive.google.com/open?id=17ctEeKPoiUhx65Ig6hvCCWoK-deZiCKK>

TestkingPass Esri EAPA_2025 Exam Questions are made in accordance with the latest syllabus and the actual Esri EAPA_2025 certification exam. We constantly upgrade our training materials, all the products you get with one year of free updates. You can always extend the to update subscription time, so that you will get more time to fully prepare for the exam. If you still confused to use the training materials of TestkingPass, then you can download part of the examination questions and answers in TestkingPass website. It is free to try, and if it is suitable for you, then go to buy it, to ensure that you will never regret.

Whether you prefer web-based practice exam, desktop-based exam, or PDF real questions, we've got you covered. We believe that variety is key when it comes to Esri EAPA_2025 Exam Preparation, and that's why we offer three formats that cater to different learning styles and preferences.

Free PDF 2025 The Best Esri EAPA_2025 Test Registration

If you are anxious about whether you can pass your exam and get the certificate, we think you need to buy our EAPA_2025 study materials as your study tool, our product will lend you a good helping hand. If you are willing to take our EAPA_2025 study materials into more consideration, it must be very easy for you to pass your exam in a short time. 99% people who have used our EAPA_2025 Study Materials passed their exam and got their certificate successfully, it is no doubt that it means our EAPA_2025 study materials have a 99% pass rate. So our product will be a very good choice for you.

Esri EAPA_2025 Exam Syllabus Topics:

Topic	Details
Topic 1	• Perform Analysis and Query Data: This section of the exam measures skills of GIS Specialist and focuses on applying geoprocessing tools to analyze spatial data, running attribute and spatial queries, using overlays, proximities, summaries, and working with environment settings for automated workflows.

Topic 2	• Use Raster and Imagery Data: This section of the exam measures skills of GIS Analyst and tests your ability to work with rasters and imagery including mosaic datasets, raster functions like NDVI, mosaic methods, exporting rasters, and managing raster analysis environments.
Topic 3	• Create and Share Maps and Layouts: This section of the exam measures skills of GIS Specialist and includes creating polished maps—designing layouts, inserting elements like scale bars, legends, titles, and sharing outputs via print, PDF, or packages for collaboration.
Topic 4	• Edit Features and Organize Workflows: This section of the exam measures skills of GIS Analyst and evaluates your competency in editing geospatial features through snapping, templates, sketch tools, performing quality control, and managing simple tasks including map layouts and bookmarks.
Topic 5	• Automate Workflows: This section of the exam measures skills of GIS Specialist and examines your ability to build and manage models using ModelBuilder, construct geoprocessing workflows, chain together tools, and automate repeatable GIS tasks effectively.

Esri ArcGIS Pro Associate 2025 Sample Questions (Q61-Q66):

NEW QUESTION # 61

A GIS analyst is about to run analysis using multiple feature layers from the current map. They want to do one final check to ensure which feature classes do and do not have definition queries as expected.

How should the analyst check this most efficiently?

- A. Select layers in Contents > Feature Layer - Data tab > Definition Query
- B. Right-click layer in Contents > Properties > Definition Query
- C. Contents pane > Filter > Active Definition Query

Answer: C

Explanation:

ArcGIS Pro allows filtering of layers in the Contents pane using various filters. The most efficient way to check which layers have definition queries applied is to use the filter option "Active Definition Query" directly in the Contents pane. This instantly shows only those layers that have active definition queries, allowing rapid verification across multiple layers without needing to click through each layer's properties individually.

* Option A requires selecting each layer one-by-one.

* Option C also requires manual inspection of each layer's properties.

* Option B provides a batch view directly within the Contents pane.

Therefore, the correct answer is B.

-

NEW QUESTION # 62

A GIS technician has two feature classes: Sites and Buildings. The technician needs to assign the building name to the site if they intersect when adding/updating site features and wants to use attribute rules to do this.

Which attribute rule type should the analyst use to accomplish this task?

- A. Calculation rule
- B. Validation rule
- C. Constraint rule

Answer: A

Explanation:

Calculation rules automatically calculate attribute values based on spatial relationships, other attribute values, or predefined logic at the time of feature creation or update. In this scenario, the intersecting building name can be assigned automatically to the site feature using a calculation rule.

* Validation rules (Option A) check for rule compliance but don't assign values.

* Constraint rules (Option B) prevent invalid edits but do not calculate fields.

Therefore, the correct answer is C.

NEW QUESTION # 63

A GIS analyst is assigned to update an existing roads feature class (line features) with new features and information obtained from a third-party agency. However, the column names in the new feature class and the old feature class do not match.

Which geoprocessing tool should the analyst use to update the old feature class by correctly matching the columns?

- A. Union with 'Attributes To Join' set as 'All Attributes'
- **B. Append with 'Schema Type' as 'Test'**
- C. Append with 'Schema Type' as 'No_Test'

Answer: B

Explanation:

Using the Append tool with Schema Type set to 'Test' ensures that fields in both datasets match before appending. This allows the analyst to verify that fields align correctly and prevents mismatched data from being incorrectly merged.

* 'No_Test' (Option B) appends records regardless of schema mismatch, which is risky here.

* Union (Option C) combines geometries, not designed for updating attribute schemas.

Therefore, the correct answer is A.

NEW QUESTION # 64

A GIS analyst is trying to conduct overlay analysis using the Union tool but is unable to run the tool due to a red X in one of the parameters.

- A. Both input features are not polygon feature classes.
- B. The input features do not geometrically intersect.
- **C. The environment settings for Processing Extent do not include the participating features.**

Answer: C

Explanation:

In ArcGIS Pro, a red X next to a parameter in a geoprocessing tool typically indicates an invalid input due to conflicts with the current environment settings. One of the most common causes is when the Processing Extent environment setting is configured in a way that excludes the actual input features.

The Union tool requires that input features fall within the set extent. If the Processing Extent does not cover any part of one or more input features, they are considered invalid and flagged with a red X, preventing the tool from running.

The software checks whether all input features are accessible within the defined extent. If they are not, this pre-validation error is triggered—even if the inputs are valid in terms of geometry or feature type.

* Option A is incorrect because geometrical intersection is not a requirement for Union to run—it simply overlays features and includes all areas.

* Option C is also incorrect, as the Union tool does indeed require polygon feature classes, but if incorrect feature types are used, a different error (not a red X related to extent) is shown.

This confirms that the red X in this scenario is caused by the Processing Extent settings not including the input features, making the correct answer B.

NEW QUESTION # 65

In ArcGIS Pro, a GIS analyst adds a mosaic dataset to a map and notices that the entire mosaic area is covered with a black and white checkerboard.

Which tool should the analyst use to make the images visible in the map as part of the mosaic dataset?

- **A. Repair Mosaic Dataset Paths**
- B. Build Pyramids
- C. Define Overviews

Answer: A

Explanation:

The black-and-white checkerboard indicates that the mosaic dataset cannot locate the source rasters. Repair Mosaic Dataset Paths allows the analyst to correct the file paths if the rasters have been moved or renamed, thus restoring visibility.

* Define Overviews (Option A) creates reduced-resolution overviews for fast display but does not fix broken paths.

* Build Pyramids (Option B) builds pyramids for raster display performance but also requires valid data paths first. Therefore, the correct answer is C.

NEW QUESTION # 66

.....

The competition in IT industry is increasingly intense, so how to prove that you are indispensable talent? To pass the EAPA_2025 certification exam is persuasive. What we can do for you is to let you faster and more easily pass the EAPA_2025 Exam. Our TestkingPass have owned more resources and experiences after development for years. Constant improvement of the software also can let you enjoy more efficient review process of EAPA_2025 exam
