With the Lpi 010-160 Certification Exam you can learn these changes and stay updated with the latest technologies and trends.

Lpi Linux Essentials Certificate Exam - version 1.6 Sample Questions (Q78-

Q83):

NEW QUESTION # 78
A directory contains the following files:

```
a.txt
b.txt
c.cav
```

What would be the output of the following shell script?
for file in *.txt

```
do
    echo $file
done
```

*.txt

- A. a. txt
- B. a b
- C. c.cav
- D. b. txt
- E. a.txt

Answer: D

NEW QUESTION # 79
What is true about the owner of a file?

- A. When a user is deleted, all files owned by the user disappear.
- B. The user owning a file must be a member of the file's group.
- C. Each file is owned by exactly one user and one group.
- D. The owner of a file cannot be changed once it is assigned to an owner.
- E. The owner of a file always has full permissions when accessing the file.

Answer: C

Explanation:
In Linux, every file and directory is associated with an owner and a group. The owner is the user who created the file or directory, and the group is the group to which the owner belongs. Therefore, each file is owned by exactly one user and one group. This is true for option A. The other options are false for the following reasons:
Option B: The owner of a file does not always have full permissions when accessing the file. The permissions are determined by the file mode, which can be changed by the owner or the root user. The file mode specifies the read, write, and execute permissions for the owner, the group, and others. The owner can have different permissions than the group or others.
Option C: The user owning a file does not have to be a member of the file's group. The owner can change the group ownership of the file to any group on the system, regardless of whether the owner belongs to that group or not. However, only the root user or a user with the CAP_CHOWN capability can change the group ownership to a group that the owner is not a member of.
Option D: When a user is deleted, all files owned by the user do not disappear. The files remain on the system, but their owner is changed to an invalid user ID (UID). The files can still be accessed by the group or others, depending on the permissions. The files can also be reclaimed by the root user or a user with the CAP_CHOWN capability, who can change the owner to a valid user.
Option E: The owner of a file can be changed once it is assigned to an owner. The owner can transfer the ownership to another user, or the root user or a user with the CAP_CHOWN capability can change the owner to any user on the system. The command to change the owner of a file is chown. NEW QUESTION # 80
Which of the following programs are web servers? (Choose two.)

- A. NGINX

- B. Curl
- C. Apache HTTPD
- D. Postfix
- E. Dovecot

Answer: A,C

Explanation:
Explanation

NEW QUESTION # 81
Which of the following commands creates an archive file work.tar from the contents of the directory ./ work/?

- A. tar -cf work.tar ./work/
- B. tar --new work.tar ./work/
- C. tar -create work.tgz -content ./work/
- D. tar work.tar < ./work/
- E. tar work > work.tar

Answer: A

Explanation:
The correct command to create an archive file work.tar from the contents of the directory ./work/ is tar -cf work.tar ./work/. This command uses the -c option to create a new archive, the -f option to specify the file name, and the ./work/ argument to indicate the source directory. The other commands are incorrect for various reasons:
A . tar --new work.tar ./work/ is incorrect because there is no --new option in the tar command. The correct option for creating a new archive is --create or -c.
C . tar -create work.tgz -content ./work/ is incorrect because the -content option is not valid. The correct option for specifying the source files or directories is --files-from or -T. Also, the work.tgz file name implies compression, but the command does not use any compression option such as -z, -j, or -J.
D . tar work.tar < ./work/ is incorrect because the tar command does not accept input redirection from the standard input. The correct way to use the tar command is to provide the options and arguments after the command name.
E . tar work > work.tar is incorrect because the tar command does not produce output redirection to the standard output. The correct way to use the tar command is to use the -f option to specify the output file name.
