CheckPoint Check Point Certified Troubleshooting Expert - R81.20 Sample Questions (Q50-Q55):

NEW QUESTION # 50

You need to run a kernel debug over a longer period of time as the problem occurs only once or twice a week. Therefore you need to add a timestamp to the kernel debug and write the output to a file. What is the correct syntax for this?

- A. fw ctl kdebug -T -f> filename.debug
- B. fw ctl debug -T -f> filename.debug
- C. fw ell kdebug -T > filename.debug
- D. fw ctl kdebug -T -f-o filename.debug

Answer: D

NEW QUESTION # 51

If the cpsemd process of SmartEvent has crashed or is having trouble coming up, then it usually indicates that _____.

- A. The SmartEvent core on the Solr indexer has been deleted
- B. Postgres database is down
- C. The loqqed in administrator does not have permissions to run SmartEvent
- D. Cpd daemon is unable to connect to the log server

Answer: B

NEW QUESTION # 52

What are the three main component of Identity Awareness?

- A. Client, SMS and Secure Gateway
- B. Identity Awareness Blade on Security Gateway, User Database on Security Management Server and Active Directory
- C. Identity Source Identity Server (POP) and Identity Enforcement (PEP)
- D. User, Active Directory and Access Role

Answer: C

NEW QUESTION # 53

What is the most efficient way to read an IKEv2 Debug?

- A. IKEview
- B. notepad++
- C. any xml editor
- D. vi on the cti

Answer: A

Explanation:

IKE view is the most efficient way to read an IKEv2 debug. IKE view is a graphical user interface tool that enables you to analyze the IKEv2 debugs generated by the Security Gateway1. It can parse the debug files and display the information in a structured and readable format. It can also filter the debug messages based on various criteria, such as IP address, encryption domain, or IKEv2 state1. IKE view can help you to troubleshoot the IKEv2 issues and identify the root cause of the problems1. Reference: IKEView: VPN Debugging Tool - Check Point Software

NEW QUESTION # 54

What Check Point process controls logging?

- A. CPM
- B. FWD
- C. CPD
- D. CPVVD

Answer: C

Explanation:

The CPD process controls logging on the Security Management Server or the Log Server. It is responsible for receiving logs from the Security Gateways, storing them in the log files, and forwarding them to the SmartLog and SmartEvent servers. It also handles the communication with the SmartConsole clients and the CPM process. The CPD process runs on the Security Management Server or the Log Server as part of the Management High Availability module.

Reference:

- 1: Check Point Processes and Daemons - CPD
- 2: Troubleshooting Check Point logging issues when Security Management Server / Log Server is not receiving logs from Security Gateway Troubleshooting Expert R81.1 (CCTE) Course Outline - Module 9: Logging and Status Troubleshooting

NEW QUESTION # 55
