

Exam 1Z0-1072-25 Assessment & Dumps 1Z0-1072-25 Vce

BONUS!!! Download part of PassSureExam 1Z0-1072-25 dumps for free: https://drive.google.com/open?id=1Je-q3Vd7e3tGKn1jjO8r7pF7rM15QV_Q

We are all well aware that a major problem in the industry is that there is a lack of quality study materials. Our 1Z0-1072-25 braindumps provides you everything you will need to take a certification examination. Details are researched and produced by 1Z0-1072-25 Dumps Experts who are constantly using industry experience to produce precise, logical verify for the test. You may get 1Z0-1072-25 exam dumps from different web sites or books, but logic is the key.

Our 1Z0-1072-25 learning materials are carefully compiled by industry experts based on the examination questions and industry trends. You don't have to worry about our learning from 1Z0-1072-25 exam question. We assure you that our 1Z0-1072-25 learning materials are easy to understand and use the fewest questions to convey the most important information. As long as you follow the steps of our 1Z0-1072-25 Quiz torrent, your mastery of knowledge will be very comprehensive and you will be very familiar with the knowledge points. This will help you pass the exam more smoothly.

Dumps 1Z0-1072-25 Vce | Test 1Z0-1072-25 Score Report

The whole world of 1Z0-1072-25 preparation materials has changed so fast in the recent years because of the development of internet technology. We have benefited a lot from those changes. In order to keep pace with the development of the society, we also need to widen our knowledge. If you are a diligent person, we strongly advise you to try our 1Z0-1072-25 real test. You will be attracted greatly by our 1Z0-1072-25 practice engine. .

Oracle 1Z0-1072-25 Exam Syllabus Topics:

Topic	Details
Topic 1	• Identity and Access Management (IAM): This domain validates skills of security architects implementing granular access controls, emphasizing IAM policy creation, compartment organization, and dynamic group configuration. It covers identity domain management, network source restrictions, and tag-based access mechanisms to enforce least-privilege principles across OCI resources
Topic 2	• Storage: Designed for storage administrators managing enterprise data solutions, this section tests proficiency in deploying Block • File • Object Storage with lifecycle management, cross-region replication, and tiered storage strategies. It includes configuring volume groups, snapshots, versioning, and security controls while analyzing storage performance metrics and cost optimization techniques.

Topic 3	• Networking: Targeting network architects designing secure cloud architectures, this domain focuses on Virtual Cloud Network (VCN) implementation, including subnet design, IP address management, and routing through gateways (NAT, service, internet). It assesses expertise in VPN • FastConnect deployment, DNS configuration, load balancer setup, and advanced tools like Network Path Analyzer for troubleshooting latency or connectivity issues.
Topic 4	• Compute: This section measures skills of cloud architects responsible for designing scalable and resilient infrastructure, covering compute instance configuration, autoscaling policies, and OS management. It evaluates understanding of OCI compute image options, infrastructure maintenance processes, and strategies for optimizing instance performance across availability domains.

Oracle Cloud Infrastructure 2025 Architect Associate Sample Questions (Q43-Q48):

NEW QUESTION # 43

How can OCI IAM be configured to facilitate cross-region access?

- A. The identity domain automatically replicates to the other region.
- B. Users can access resources in all regions by default.
- **C. The administrator can grant users permissions to access specific resources in the other region.**
- D. Identity domain replication must be enabled.

Answer: C

Explanation:

In Oracle Cloud Infrastructure (OCI), cross-region access is facilitated by configuring IAM policies that grant users or groups permissions to access resources in other regions. IAM policies in OCI are global, meaning they apply across all regions by default. However, an administrator can specifically configure these policies to allow or restrict access to resources in different regions.

Example: An administrator can write a policy that allows a user to manage compute instances in a specific region by including the region's name in the policy statement.

Reference:

Oracle Cloud Infrastructure Documentation: IAM Policies

NEW QUESTION # 44

By default, OCI IAM policies follow the principle of least privilege. What does this principle mean in the context of policy creation?

- A. Policies should grant all possible permissions to simplify access control.
- B. Policies should be written in a complex and technical manner to enhance security.
- **C. Policies should provide only the minimum set of permissions required for users to perform their tasks effectively.**
- D. Policies should be identical for all users within a tenancy.

Answer: C

Explanation:

The principle of least privilege is a security best practice that dictates that users should only be granted the minimum set of permissions necessary to perform their tasks. This principle helps to minimize the risk of accidental or malicious actions that could compromise security.

IAM Policies in OCI: When creating IAM policies in OCI, you should carefully evaluate the required permissions and only grant those that are absolutely necessary for the users or groups to perform their specific roles. This helps to reduce the attack surface and prevent unauthorized access to sensitive resources.

Oracle Cloud Infrastructure Documentation: Identity and Access Management (IAM) Best Practices

NEW QUESTION # 45

Which statement is true about pre-authenticated requests?

- A. You need to provide your OCI credentials to the partner company.
- B. Deleting a pre-authenticated request does not revoke access.
- **C. You cannot edit a pre-authenticated request.**
- D. Pre-authenticated requests can be used to delete buckets.

Answer: C

Explanation:

In Oracle Cloud Infrastructure (OCI), pre-authenticated requests (PARs) allow users to grant access to specific objects in Object Storage without requiring the recipient to have an OCI account or credentials. This feature is useful for sharing objects securely without exposing broader access.

Cannot Edit a PAR: Once a pre-authenticated request is created, you cannot edit it. If you need to change the settings, such as the expiration date or the object being shared, you must delete the existing PAR and create a new one.

Other Statements:

Deleting a PAR does indeed revoke access immediately, contradicting option B.

Providing OCI credentials (C) is not required for using PARs. The purpose of PARs is to avoid sharing credentials.

Deleting Buckets (D): PARs are designed for accessing objects, not for administrative actions like deleting buckets.

Relevant OCI Documentation:

Managing Pre-Authenticated Requests

This reference outlines the features and limitations of pre-authenticated requests, including the inability to edit them once created.

NEW QUESTION # 46

Which Oracle Cloud Infrastructure (OCI) Identity and Access Management (IAM) policy is invalid?

- A. Allow group 'Default/'A-Admins' to manage all-resources in compartment Project-A
- **B. Allow any-user to inspect users in tenancy**
- C. Allow dynamic-group 'Default/'FrontEnd' to manage instance-family in compartment Project-A
- D. Allow group 'Default/'A-Developers' to create volumes in compartment Project-A

Answer: B

Explanation:

In Oracle Cloud Infrastructure (OCI), Identity and Access Management (IAM) policies are used to control access to resources. The policy in option C is invalid because "any-user" is not a valid principal in OCI IAM policies. OCI policies can only grant permissions to groups or dynamic groups, but not to arbitrary users.

Here's an explanation for each option:

A . Allow dynamic-group 'Default/'FrontEnd' to manage instance-family in compartment Project-A: This is valid. It grants the dynamic group 'FrontEnd' the ability to manage instances within the Project-A compartment.

B . Allow group 'Default/'A-Admins' to manage all-resources in compartment Project-A: This is valid. It provides full administrative access to all resources in the Project-A compartment for the 'A-Admins' group.

C . Allow any-user to inspect users in tenancy: This is invalid because OCI does not allow the use of "any-user" in policies. You must specify a valid group or dynamic group to define permissions.

D . Allow group 'Default/'A-Developers' to create volumes in compartment Project-A: This is valid. It permits the 'A-Developers' group to create volumes in the Project-A compartment.

OCI Policy Reference

NEW QUESTION # 47

Which TWO statements about the Oracle Cloud Infrastructure (OCI) File Storage Service are accurate?

- **A. Customers can encrypt data in their file system using their own Vault encryption key.**
- B. Communication with file systems in a mount target is encrypted via HTTPS.
- C. Customers can encrypt the communication to a mount target via export options.
- **D. File systems use Oracle-managed keys by default.**

Answer: A,D

Explanation:

Oracle Cloud Infrastructure (OCI) File Storage Service offers robust encryption capabilities to ensure data security.

D. Oracle-Managed Encryption: By default, all data stored in OCI File Storage is encrypted using Oracle-managed keys. This ensures that data is encrypted at rest without requiring any action from the customer.

A . Communication is not encrypted via HTTPS when accessing file systems; instead, encryption in transit is typically managed via NFS over TLS.
