

Exam 1Z0-1072-25 Bootcamp - Latest 1Z0-1072-25 Examprep

2025 Latest TorrentValid 1Z0-1072-25 PDF Dumps and 1Z0-1072-25 Exam Engine Free Share: https://drive.google.com/open?id=124N2Ue3kzVG_rzrH4YHeyxx1KyPCvRJ8

Our practice exams are designed solely to help you get your Oracle 1Z0-1072-25 certification on your first try. A Oracle 1Z0-1072-25 practice test will help you understand the exam inside out and you will get better marks overall. It is only because you have practical experience of the exam even before the exam itself. TorrentValid offers authentic and up-to-date study material that every candidate can rely on for good preparation. Our top priority is to help you pass the Oracle Cloud Infrastructure 2025 Architect Associate (1Z0-1072-25) exam on the first try.

Oracle 1Z0-1072-25 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Identity and Access Management (IAM): This domain validates skills of security architects implementing granular access controls, emphasizing IAM policy creation, compartment organization, and dynamic group configuration. It covers identity domain management, network source restrictions, and tag-based access mechanisms to enforce least-privilege principles across OCI resources
Topic 2	<ul style="list-style-type: none">Compute: This section measures skills of cloud architects responsible for designing scalable and resilient infrastructure, covering compute instance configuration, autoscaling policies, and OS management. It evaluates understanding of OCI compute image options, infrastructure maintenance processes, and strategies for optimizing instance performance across availability domains.
Topic 3	<ul style="list-style-type: none">Networking: Targeting network architects designing secure cloud architectures, this domain focuses on Virtual Cloud Network (VCN) implementation, including subnet design, IP address management, and routing through gateways (NAT, service, internet). It assesses expertise in VPNFastConnect deployment, DNS configuration, load balancer setup, and advanced tools like Network Path Analyzer for troubleshooting latency or connectivity issues.

Topic 4	<ul style="list-style-type: none"> • Storage: Designed for storage administrators managing enterprise data solutions, this section tests proficiency in deploying Block • File • Object Storage with lifecycle management, cross-region replication, and tiered storage strategies. It includes configuring volume groups, snapshots, versioning, and security controls while analyzing storage performance metrics and cost optimization techniques.

Free PDF 2025 Oracle 1Z0-1072-25: Latest Exam Oracle Cloud Infrastructure 2025 Architect Associate Bootcamp

The content of our 1Z0-1072-25 practice engine is chosen so carefully that all the questions for the 1Z0-1072-25 exam are contained. And our 1Z0-1072-25 study materials have three formats which help you to read, test and study anytime, anywhere. This means with our products you can prepare for exams efficiently and at the same time you will get 100% success for sure. If you desire a 1Z0-1072-25 Certification, our products are your best choice.

Oracle Cloud Infrastructure 2025 Architect Associate Sample Questions (Q46-Q51):

NEW QUESTION # 46

What would be the total meteredBytes shown by the File Storage service after the hourly update cycle is complete when you overwrite 0.5 GB of a 1 GB file?

- A. 2.5 GB
- **B. 1.5 GB**
- C. 0.5 GB
- D. 1 GB

Answer: B

Explanation:

In Oracle Cloud Infrastructure (OCI) File Storage, when you overwrite a portion of a file, the service does not immediately reclaim the space occupied by the previous version of the file. The total meteredBytes reflects both the original data and the new data written.

Scenario Explanation: You start with a 1 GB file. When you overwrite 0.5 GB of this file, the file system retains both the 0.5 GB of the original file and the new 0.5 GB you wrote.

Calculation: The original 1 GB file contributes 1 GB to meteredBytes. When 0.5 GB is overwritten, the total usage becomes 1.5 GB (1 GB original + 0.5 GB new).

Thus, after the hourly update cycle, the total meteredBytes shown by the File Storage service will be 1.5 GB.

NEW QUESTION # 47

Which TWO statements are TRUE about Private IP addresses in Oracle Cloud Infrastructure (OCI)?

- A. Each VNIC can only have one private IP address.
- **B. A private IP can have an optional public IP assigned to it if it resides in a public subnet.**
- C. By default, the primary VNIC of an instance in a subnet has one primary private IP address and one secondary private IP address.
- **D. By default, the primary VNIC of an instance in a subnet has one primary private IP address.**

Answer: B,D

Explanation:

In Oracle Cloud Infrastructure (OCI), understanding how private IP addresses work is crucial for configuring network interfaces and

managing instances within your Virtual Cloud Network (VCN).

Primary VNIC and Private IP Address:

When an instance is launched in OCI, it is attached to a Virtual Network Interface Card (VNIC). The primary VNIC, which is automatically created during the instance launch, is associated with a primary private IP address by default. This private IP address is essential for the instance to communicate within the VCN. The primary private IP address is automatically assigned and cannot be removed from the primary VNIC while the instance is running. This supports the statement C.

Additional Private IPs:

Contrary to statement B, each VNIC can indeed have multiple private IP addresses, but by default, the primary VNIC comes with only one primary private IP. You can manually add secondary private IPs if needed. However, the additional IPs are not assigned by default; hence, A is incorrect.

Public IP Association:

For instances requiring internet access, a public IP address can be optionally assigned to the private IP address if the instance is in a public subnet. This is critical for scenarios where an instance needs to communicate with the internet or external networks. This aligns with statement D.

Relevant OCI Documentation:

Oracle Cloud Infrastructure Networking Overview

VNICs and Private IPs

These references provide additional context and detail on how private IP addresses work within OCI and clarify the correct statements.

NEW QUESTION # 48

Which TWO options will accomplish a fully redundant connection from an on-premises data center to a Virtual Cloud Network (VCN) in the us-ashburn-1 region?

- A. Configure a Site-to-Site VPN from a single on-premises CPE.
- B. Configure one FastConnect virtual circuit to the us-ashburn-1 region and a Site-to-Site VPN to the us-ashburn-1 region.
- C. Configure one FastConnect virtual circuit to the us-ashburn-1 region and the second FastConnect virtual circuit to the us-phoenix-1 region.
- D. Configure two FastConnect virtual circuits to the us-ashburn-1 region and terminate them in diverse hardware on-premises.

Answer: B,D

Explanation:

For a fully redundant connection from an on-premises data center to a VCN in the OCI us-ashburn-1 region, it is important to ensure high availability and fault tolerance. Here's how each option contributes to redundancy:

Option B: Two FastConnect Virtual Circuits:

FastConnect provides a dedicated, private connection with higher bandwidth and more consistent performance compared to a VPN. To achieve redundancy, you can configure two FastConnect circuits in the same region (us-ashburn-1), each terminated on diverse hardware on-premises. This setup ensures that even if one circuit or its associated hardware fails, the other circuit can maintain the connection. This ensures no single point of failure in the connectivity to OCI. Thus, option B is correct.

Option D: FastConnect and Site-to-Site VPN:

Another approach to redundancy is to have a mix of connection types. By setting up one FastConnect circuit and one Site-to-Site VPN, both terminating in the same region (us-ashburn-1), you create a diverse connection path. If the FastConnect connection fails, traffic can automatically route through the VPN connection, maintaining connectivity. This setup adds an extra layer of redundancy, making option D correct as well.

Incorrect Options:

Option A: Only configuring a Site-to-Site VPN from a single on-premises CPE does not provide redundancy because it involves just one connection path. If that connection or the CPE fails, there would be no fallback.

Option C: Configuring FastConnect circuits to different regions (us-ashburn-1 and us-phoenix-1) does not provide redundancy within a single region but rather across regions, which is not required for regional redundancy.

Relevant OCI Documentation:

OCI FastConnect Overview

Using Site-to-Site VPN and FastConnect for Redundancy

These references offer more detailed information on setting up redundant connections and the benefits of each connection type within OCI.

NEW QUESTION # 49

You want to protect your VM instance from low-level threats, such as rootkits and bootkits. What should you do?

- A. Use in-transit encryption.
- **B. Create a shielded instance.**
- C. Create a burstable instance.
- D. Use Vulnerability Scanning Service.

Answer: B

Explanation:

To protect your VM instance from low-level threats, such as rootkits and bootkits, you should create a shielded instance in Oracle Cloud Infrastructure (OCI). Shielded instances are designed to provide enhanced security features, including:

Secure Boot: Ensures that the instance boots only with trusted software.

Measured Boot: Records boot metrics, allowing verification that the instance has not been tampered with.

Trusted Platform Module (TPM): Provides additional security through cryptographic functions.

These features help protect against low-level threats that could compromise the integrity of the instance at boot time.

Oracle Cloud Infrastructure Documentation: Shielded Instances

NEW QUESTION # 50

Which THREE protocols are supported by the Oracle Cloud Infrastructure (OCI) private Network Load Balancers?

- A. ICMP
- B. BGP
- **C. UDP**
- D. iSCSI
- **E. TCP**
- **F. HTTP**

Answer: C,E,F

Explanation:

The OCI Private Network Load Balancer supports multiple protocols for managing traffic efficiently across your instances within a private subnet. Specifically, it supports:

UDP (User Datagram Protocol): Commonly used for applications that require fast, connectionless communication, such as video streaming or DNS services.

TCP (Transmission Control Protocol): A reliable, connection-oriented protocol, widely used for web traffic and other applications requiring data integrity.

HTTP (Hypertext Transfer Protocol): Frequently used for web traffic, it is an application-layer protocol built on top of TCP and enables communication between web browsers and servers.

The combination of these protocols allows the OCI Network Load Balancer to manage diverse workloads, including web services and real-time applications.

NEW QUESTION # 51

.....

The 1Z0-1072-25 torrent prep contains the real questions and simulation questions of various qualifying examinations. It is very worthy of study efficiently. Time is constant development, and proposition experts will set questions of real 1Z0-1072-25 exam continuously according to the progress of the society change tendency of proposition, and consciously highlight the hot issues and policy changes. In order to be able to better grasp the proposition thesis direction, the 1Z0-1072-25 study question focus on the latest content to help you pass the 1Z0-1072-25 exam.
