

# Exam 1Z0-931-25 Guide - Latest 1Z0-931-25 Cram Materials

BONUS!!! Download part of Pass4Leader 1Z0-931-25 dumps for free: [https://drive.google.com/open?id=1omZQUwQ14wd5hKjZhAV\\_SDefLjUmKufl](https://drive.google.com/open?id=1omZQUwQ14wd5hKjZhAV_SDefLjUmKufl)

Once you submit your practice, the system of our 1Z0-931-25 exam quiz will automatically generate a report. The system is highly flexible, which has short reaction time. So you will quickly get a feedback about your exercises of the 1Z0-931-25 preparation questions. For example, it will note that how much time you have used to finish the 1Z0-931-25 Study Guide, and how much marks you got for your practice as well as what kind of the questions and answers you are wrong with.

## Oracle 1Z0-931-25 Exam Syllabus Topics:

| Topic   | Details                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|---------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Topic 1 | <ul style="list-style-type: none"><li>• Data Lake Analytics with Autonomous Database: This section of the exam measures the skills of Big Data Engineers and explores how Autonomous Database can be used for analytics in data lake environments. It includes data ingestion, query optimization, and leveraging cloud-native analytics services, ensuring engineers can efficiently process and analyze large volumes of structured and unstructured data.</li></ul>                                                                                                                     |
| Topic 2 | <ul style="list-style-type: none"><li>• Getting Started with Autonomous Database: This section of the exam measures the skills of Database Administrators and covers the architecture and key features of Oracle Autonomous Database. It explains how the database integrates within the Oracle ecosystem and provides an overview of different Autonomous Database offerings and their licensing models, helping administrators understand how to deploy and manage these cloud-based databases efficiently.</li></ul>                                                                    |
| Topic 3 | <ul style="list-style-type: none"><li>• Migrating to Autonomous Database: This section of the exam measures the skills of Cloud Migration Specialists and covers strategies for migrating existing databases to Autonomous Database. It includes understanding migration considerations, and available options, and using Oracle Data Pump to transfer data seamlessly while minimizing downtime, ensuring smooth transitions to Oracle Cloud infrastructure.</li></ul>                                                                                                                    |
| Topic 4 | <ul style="list-style-type: none"><li>• Autonomous Database Shared: This section of the exam measures the skills of Cloud Engineers and focuses on creating and managing shared Autonomous Database instances. It includes provisioning, scaling, and starting or stopping instances, as well as database consolidation with Elastic Resource Pools. It also covers user management, cloning, database migration, monitoring, backup and restore processes, and introduces Data Guard for high availability, ensuring cloud engineers can maintain optimal database performance.</li></ul> |

|         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|---------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Topic 5 | <ul style="list-style-type: none"> <li>Autonomous Database Tools: This section of the exam measures the skills of Data Analysts and covers the tools available within Autonomous Databases for advanced data processing and analytics. It includes Oracle Machine Learning, APEX, and SQL Developer Web for database development, as well as data transformation, business model creation, data insights, and data analysis, allowing analysts to extract valuable insights from large datasets.</li> </ul>                                                                                                                         |
| Topic 6 | <ul style="list-style-type: none"> <li>Managing and Maintaining Autonomous Database: This section of the exam measures the skills of Database Administrators and focuses on the ongoing management and maintenance of Autonomous Database instances. It includes using REST APIs and OCI CLI for automation, configuring access control lists and private endpoints, monitoring performance, setting up notifications, utilizing features like auto-indexing and data safe, handling connectivity through wallets and service handles, and configuring disaster recovery using Data Guard to ensure business continuity.</li> </ul> |
| Topic 7 | <ul style="list-style-type: none"> <li>Developing on Autonomous Database: This section of the exam measures the skills of Application Developers and focuses on developing and extending applications using Autonomous Database. It covers using generative AI for natural language queries, Autonomous JSON Database, Oracle Text for document search, location-based analysis with Autonomous Spatial, Autonomous Graph for data relationships, and integration with Object Storage, enabling developers to build intelligent, scalable applications.</li> </ul>                                                                  |

>> Exam 1Z0-931-25 Guide <<

## Latest 1Z0-931-25 Cram Materials, 1Z0-931-25 Exam Course

There are three versions of our 1Z0-931-25 study materials so that you can choose the right version for your exam preparation. The test engine is a way of exam simulation that makes you feel the atmosphere of 1Z0-931-25 Real Exam. It brings great convenience for most IT workers because it allows candidates to practice 1Z0-931-25 exam prep anytime and anywhere as long as you download the 1Z0-931-25 dumps pdf.

## Oracle Autonomous Database Cloud 2025 Professional Sample Questions (Q117-Q122):

### NEW QUESTION # 117

Which is NOT needed to manage Oracle Autonomous Database with REST APIs?

- A. Database ADMIN password
- B. Tenancy's OCID
- C. User's OCID
- D. Fingerprint of the public key

**Answer: A**

Explanation:

Managing Autonomous Database via REST APIs relies on OCI authentication:

Correct Answer (D): "Database ADMIN password" is not needed. REST API access uses OCI IAM credentials, not database-level credentials like the ADMIN password.

Required Items:

A: User's OCID identifies the API caller.

B: Tenancy's OCID specifies the cloud environment.

C: Fingerprint of the public key authenticates API requests with a private-public key pair.

This ensures secure, external management without exposing database credentials.

### NEW QUESTION # 118

Which of the following two statements are correct? (Choose two.)

- A. Data Transforms Card provides access to Oracle Data Integrator (ODI) Web Edition.
- B. ODI Web Edition can be installed from Oracle Cloud Infrastructure (OCI) Marketplace.

- C. ODI Web Edition is available only on Oracle Linux.
- **D. All capabilities of ODI Classic are available with ODI Web Edition.**

**Answer: B,D**

Explanation:

Oracle Data Integrator (ODI) Web Edition integrates with Autonomous Database:

Correct Answer (B): "ODI Web Edition can be installed from Oracle Cloud Infrastructure (OCI) Marketplace" is true. It's offered as a Marketplace image for easy deployment on OCI compute instances.

Correct Answer (D): "All capabilities of ODI Classic are available with ODI Web Edition" is correct; the web version retains full functionality for data integration tasks.

Incorrect Options:

A: ODI Web Edition is not limited to Oracle Linux; it runs on various platforms supported by OCI.

C: The Data Transforms Card in Database Actions uses a simplified UI, not full ODI Web Edition access.

This enhances data integration flexibility in the cloud.

## NEW QUESTION # 119

Which four levels of access can be defined in policies? (Choose four.)

- A. Create
- **B. Read**
- **C. Inspect**
- **D. Manage**
- **E. Use**

**Answer: B,C,D,E**

Explanation:

Oracle Cloud Infrastructure (OCI) Identity and Access Management (IAM) defines four verb levels for policy permissions:

Read (B): Allows viewing resource details without modification (e.g., read autonomous-databases).

Manage (C): Permits full control, including creating, updating, and deleting resources (e.g., manage autonomous-databases).

Inspect (D): Enables listing resources and basic metadata without detailed access (e.g., inspect autonomous-databases).

Use (E): Allows interaction with resources (e.g., connecting to a database) without altering their configuration.

Incorrect Option:

Create (A): "Create" is not a standalone verb; it's part of the manage verb, which includes creation, update, and deletion actions.

These levels provide granular control over resource access in OCI.

## NEW QUESTION # 120

As a database architect, you are tasked with configuring a high concurrency, production OLTP (EXAM) application to connect to an Autonomous Transaction Processing database with a requirement to have some reporting queries run in parallel mode. Which connection service is appropriate for such a workload?

- A. TP
- **B. HIGH**
- C. MEDIUM
- D. TPURGENT

**Answer: B**

Explanation:

Autonomous Transaction Processing (ATP) provides predefined connection services to optimize different workload types. For a high-concurrency OLTP application with parallel reporting queries, the appropriate service is:

HIGH (C): The HIGH connection service in ATP is designed for workloads requiring high concurrency and throughput, making it ideal for a production OLTP application like "EXAM" that handles many simultaneous transactions (e.g., user requests).

Additionally, HIGH supports parallel query execution, which is critical for running reporting queries efficiently during off-peak times. It allocates more resources (e.g., OCPUs and I/O) compared to other services, ensuring performance for both transactional and analytical tasks. For example, the OLTP app might use HIGH to process thousands of concurrent user requests, while a nightly report leverages parallel processing to aggregate data quickly. In the wallet's tnsnames.ora, the HIGH service might look like exam\_high = (DESCRIPTION=...), offering the best balance for this mixed workload.

The incorrect options are:

TPURGENT (A): The TPURGENT service prioritizes low-latency, time-critical transactions (e.g., sub-second response times for single-user actions). It's optimized for latency-sensitive operations, not high concurrency or parallel reporting, and would underperform for the broader OLTP and reporting needs here. For instance, it's better suited for a single critical transaction than a multi-user system.

TP (B): The TP (Transaction Processing) service is a general-purpose option for OLTP workloads, offering moderate concurrency and latency. However, it's not optimized for high concurrency or parallel query execution, making it less suitable for a production app with reporting demands. It's a middle ground, not a top-tier performer like HIGH.

MEDIUM (D): The MEDIUM service balances performance and resource usage for moderate workloads. It supports some concurrency but lacks the resource allocation and parallel execution capabilities of HIGH, making it inadequate for a high-concurrency OLTP system with reporting requirements.

The HIGH service's ability to handle both high transactional volume and parallel reporting aligns perfectly with the scenario's strict performance needs, all within ATP's zero-maintenance framework.

### NEW QUESTION # 121

Which statement is FALSE about Data Insights?

- A. The results of the Insight analysis appear as a series of bar charts in the Data Insights dashboard
- B. Data Insights provides a wide range of graphical data presentation capabilities
- C. Data Insights are automatically generated by various analytic functions built into the database
- D. Data Insights display information about patterns and anomalies in the data of entities in your Oracle Autonomous Database

**Answer: C**

Explanation:

Data Insights is a feature in Autonomous Database that helps users understand their data. The false statement is:

Data Insights are automatically generated by various analytic functions built into the database (C): This is incorrect. Data Insights are not solely the result of automatic execution of built-in analytic functions (e.g., AVG, SUM, or RANK). Instead, they are generated through a combination of user-initiated analysis and Oracle's machine learning-driven capabilities within the Data Insights dashboard (part of Database Actions or OCI console). Users select datasets or tables, and the system applies algorithms to identify patterns (e.g., trends in sales) or anomalies (e.g., outlier transactions), but this process isn't just a passive outcome of pre-existing database functions—it's an active, curated feature requiring configuration. For example, a user might explore a SALES table, and Data Insights highlights a spike in Q4 sales, but this requires user input to define scope, not just automatic function output.

The true statements are:

Data Insights display information about patterns and anomalies in the data of entities in your Oracle Autonomous Database (A):

True. The feature visualizes trends (e.g., seasonal sales increases) and outliers (e.g., unexpected data drops) in tables or views, helping users spot significant data behaviors. For instance, it might show a bar chart of monthly revenue with an anomaly flagged for a sudden dip.

Data Insights provides a wide range of graphical data presentation capabilities (B): True. It offers visualizations like bar charts, line graphs, and scatter plots, customizable to represent data insights effectively. E.g., a line graph might track customer sign-ups over time, with options to adjust axes or filters.

The results of the Insight analysis appear as a series of bar charts in the Data Insights dashboard (D): True, partially. While bar charts are a common default (e.g., comparing sales by region), the dashboard supports multiple chart types, but the statement's focus on bar charts aligns with typical output for simple insights.

The misconception in C overlooks the interactive, ML-assisted nature of Data Insights, distinguishing it from passive function-based analytics.

### NEW QUESTION # 122

.....

There is no another great way to pass the Oracle 1Z0-931-25 exam in the first attempt only by doing a selective study with valid 1Z0-931-25 braindumps. If you already have a job and you are searching for the best way to improve your current 1Z0-931-25 test situation, then you should consider the 1Z0-931-25 Exam Dumps. By using our updated 1Z0-931-25 products, you will be able to get reliable and relative 1Z0-931-25 exam prep questions, so you can pass the exam easily. You can get one-year free 1Z0-931-25 exam updates from the date of purchase.
