Valid Cisco 500-710 Dumps Demo - Valid 500-710 Test Papers

The talent is everywhere in modern society. This is doubly true for IT field. With the popularity of the computer, hardly anyone can't use a computer. Working in the IT industry, don't you feel pressure? Educational level is not representative of your strength. Education is just a ticket, however really keeping your status is your strength. As IT staff, how to cultivate your strength? It is a good choice to take IT certification test which can not only help you master more skills, also can get the certificate to prove your ability. Do you want to take Cisco 500-710 Exam that is very popular in recent?

Cisco 500-710 Exam is designed for IT professionals who are responsible for planning, deploying, and maintaining video infrastructure solutions in a variety of settings, including small and medium-sized businesses, large enterprises, and government organizations. 500-710 exam covers a wide range of topics related to video infrastructure, including video endpoints, video conferencing, Cisco TelePresence, and the Cisco Meeting Server. Candidates must also demonstrate a strong understanding of networking fundamentals, including IP addressing, routing, and switching.

Cisco Video Infrastructure Implementation Sample Questions (Q76-Q81):

NEW QUESTION # 76

If a user of a SIP endpoint registered to an Expressway configured with only the cisco.com domain physically dials "6501", which alias is presented in the SIP INVITE message?

- A. 6501@<ip address of the endpoint>
- B. 6501@cisco.com
- C. 6501@<ip address of the Expressway>
- D. 0

Answer: B

Explanation:

* The SIP INVITE message is a request that initiates a session between two or more SIP endpoints¹.

* The SIP INVITE message contains a Request-URI, which specifies the destination address of the session¹.

* The Request-URI can be either a SIP URI or a tel URI¹. A SIP URI has the format sip:user@host, where user is the username or phone number, and host is the domain name or IP address of the SIP server². A tel URI has the format tel:phonenumber, where phonenumber is the global or local phone number³.

* If a user of a SIP endpoint registered to an Expressway configured with only the cisco.com domain physically dials "6501", the Expressway will assume that the user is dialing a SIP URI within the same domain, and append the domain name to the user part of the SIP URI⁴. Therefore, the alias presented in the SIP INVITE message will be 6501@cisco.com.

* If the user wants to dial a different domain, they must enter the full SIP URI, such as sip:

6501@example.com⁴.

* If the user wants to dial a tel URI, they must prefix the phone number with a plus sign (+), such as tel:

+6501⁴.

NEW QUESTION # 77

An engineer must match any incoming call to the Expressway that is searching for an

E.164 address of only 6 digits and append the domain cisco.com to the end. Which pattern match and replace string using regular expressions accomplish this task? (Choose two.)

- A. pattern match: ({5}\d)
- B. pattern match: ({6}\d)
- C. replace string: \1@cisco.com
- D. replace string: \\${6}@cisco.com
- E. pattern match: ({6}*)
- F. replace string: \6@cisco.com

Answer: B,C

NEW QUESTION # 78

Which two steps are needed to initially log in to the Cisco Spark Management Portal? (Choose two.)

- A. Enter the password a second time to confirm.
- B. From your web browser, navigate to <http://admin.ciscospark.com>
- C. On the next page, enter the password and click Sign In again.
- D. Enter your username and click Sign In.
- E. From your web browser, navigate to <http://cisco.com/spark>.

Answer: B,D

Explanation:

To initially log in to the Cisco Spark Management Portal, an engineer needs to follow these steps:

* From

your web browser, navigate to <http://admin.ciscospark.com>.

This is the URL for the Cisco Spark Management Portal, where you can manage your Cisco Spark services, users, devices, and settings¹.

* Enter your username and click Sign In. Your username is the email address that you used to sign up for Cisco Spark¹. You will be

redirected to the Cisco Webex login page².

* On the next page, enter the password and click Sign In again. Your password is the one that you created when you activated your Cisco Spark account¹. You will be logged in to the Cisco Spark Management Portal². References :=

NEW QUESTION # 79

Integrated Development Environment helps you to develop, test, and build an application. Which option is an IDE tool that can be used with Cisco Spark?

- A. Linux: Brackets
- B. Pythonanywhere
- **C. OSX: Atom**
- D. GitHub
- E. Windows: Notepad ++

Answer: C

Explanation:

An IDE tool is a software application that provides comprehensive facilities to computer programmers for software development. An IDE normally consists of a source code editor, build automation tools, and a debugger. Cisco Spark is a cloud-based collaboration platform that allows users to create, share, and communicate with each other. Cisco Spark supports various programming languages, such as Python, Java, Node.js, and C#. To develop applications for Cisco Spark, developers need an IDE tool that can work with these languages and interact with the Spark APIs. 1234, one of the IDE tools that can be used with Cisco Spark is OSX: Atom. Atom is a free and open-source text and source code editor for macOS, Linux, and Windows with support for plug-ins written in Node.js, and embedded Git Control, developed by GitHub.

Atom can be customized to work with different languages and frameworks, such as Python, Java, Node.js, and C#. Atom also has a package called spark-tools that provides a set of tools for developing Cisco Spark applications, such as creating bots, webhooks, and integrations. NEW QUESTION # 80

Which TMS configurations must be properly configured for the administrator to be notified remotely when certain events occur?

- A. locations
- **B. email settings**
- C. activity status
- D. general settings

Answer: B

Explanation:

To enable the administrator to be notified remotely when certain events occur, such as system errors, booking failures, or alarms, the email settings must be properly configured in TMS. The email settings allow the administrator to specify the SMTP server, the sender address, the recipient addresses, and the notification frequency for different types of events. The email settings can be configured by going to Administrative Tools

> Configuration > Email Settings¹². References :=
