Reliable ACP-120 Test Tips, Free ACP-120 Brain Dumps

It is not easy to qualify for a qualifying exam in such a short period of time. Our company's ACP-120 learning material is very good at helping customers pass the exam and obtain a certificate in a short time, and now I'm going to show you our ACP-120 Learning materials. Our products mainly include the following major features. This is a wise choice, after using our ACP-120 Training Materials, you will realize your dream of a promotion because you deserve these reports and your efforts will be your best proof.

ATLASSIAN Jira Cloud Administrator Sample Questions (Q58-Q63):

NEW QUESTION # 58

George is the project lead of several projects. Now, he needs to create projects but should not have Jira administrator privileges. What does George need?

- A. Project role
- B. Product access
- **C. Global permission**
- D. Product role
- E. Project permission

Answer: C

NEW QUESTION # 59

You performed the following steps:

- * Created a new filter with the JQL query project IN projectsWhereUserHasRole("Sales")
- * Created a filter subscription for the filter and set the recipients to the Sales group.

Leila is a member of the Sales group. Which issues will Leila receive in her subscription?

- A. Issues assigned to anyone in the Sales role
- B. Issues from projects where Leila is in the Sales group
- C. Issues assigned to anyone in the Sales group
- **D. Issues from projects where Leila is in the Sales role**

Answer: D

Explanation:

The JQL query project IN projectsWhereUserHasRole("Sales") filters for issues in projects where the user running the query has the Sales project role. Since Leila is a member of the Sales group and receives the filter subscription, the issues she receives are those from projects where Leila is in the Sales role (Option A).

* Explanation of the Correct Answer (Option A):

* The JQL function projectsWhereUserHasRole("Sales") returns a list of projects where the user executing the query is a member of the Sales project role. The query project IN projectsWhereUserHasRole("Sales") selects all issues from those projects.

* Leila, as a member of the Sales group, receives the filter subscription. When the subscription runs for Leila, the JQL query is evaluated in her context, meaning it returns issues from projects where Leila has the Sales project role.

* Exact Extract from Documentation:

Advanced searching - functions reference

The projectsWhereUserHasRole("role") function returns projects where the user running the query is a member of the specified project role.

Example:

* project IN projectsWhereUserHasRole("Sales") returns issues from projects where the user has the Sales project role. Note: For filter subscriptions, the query is executed in the context of each recipient, so results depend on the recipient's role membership. (Source: Atlassian Support Documentation, "Advanced searching - functions reference")

* Why This Fits: The filter subscription runs the JQL query for Leila, returning issues from projects where Leila is in the Sales role, making Option A the correct answer.

* Why Other Options Are Incorrect:

* Issues assigned to anyone in the Sales group (Option B):

* The JQL query does not filter by assignee or group membership. It only selects issues based on the projects where the user has the Sales role, regardless of who the issues are assigned to.

* Extract from Documentation:

To filter by assignee, use assignee in membersOf("group"). The projectsWhereUserHasRole function filters by project, not assignee. (Source: Atlassian Support Documentation, "Advanced searching - fields reference")

* Issues from projects where Leila is in the Sales group (Option C):

* The query uses projectsWhereUserHasRole("Sales"), which checks for the Sales project role, not a group. Project roles and groups are distinct, and the query does not reference group membership.

* Extract from Documentation:

Project roles are project-specific and distinct from groups. Use projectsWhereUserHasRole for roles, not membersOf for groups. (Source: Atlassian Support Documentation, "Advanced searching - functions reference")

* Issues assigned to anyone in the Sales role (Option D):

* The query does not filter by assignee or role membership of the assignee. It selects issues from projects where the user (Leila) has the Sales role, not issues assigned to users in that role.

* Extract from Documentation:

To filter by assignees in a role, additional JQL or scripting is needed. projectsWhereUserHasRole only filters by project.

(Source: Atlassian Support Documentation, "Advanced searching - fields reference")

* Additional Notes:

* TheSalesproject role must exist in the relevant projects, and Leila must be added to it inProject settings > Peoplefor those projects.

* The subscription sends emails to theSales group, and each recipient (like Leila) seesissues based on their own role membership in the JQL query's context.

* Leila must haveBrowse Projectspermission for the projects returned by the query to see the issues.
