And our Advanced-Administrator exam braindumps will never let you down.

Salesforce Certified Advanced Administrator Sample Questions (Q111-Q116):

NEW QUESTION # 111

Cloud Kicks has Service and Sales Manager roles that need to be able to see all Accounts. Currently, they each have their own custom profile. The organization-wide defaults are set to Private and a sharing rule share access to Accounts to the sales and service teams based on criteria.

What should the administrator do to allow the service and sales Manager to see all Accounts?

- A. Configure a custom profile for each manager that gives them view All on Accounts.
- **B. Create a permission set with view All on Accounts and assign it to the Service and Sales Managers.**
- C. Set the organization-wide default for Accounts to Public Read Only.
- D. Move the Service and Sales Managers higher in the role hierarchy.

Answer: B

Explanation:

Explanation

A permission set is a collection of settings and permissions that can extend users' functional access without changing their profiles. By creating a permission set with view All on Accounts and assigning it to the service and sales managers, an administrator can grant them access to all account records in their org without modifying their existing profiles. NEW QUESTION # 112

The administrator at Universal Containers does a soft launch of the Salesforce Authenticator app and allows users to optionally use it to log in. The administrator would now like to look at how many users have successfully used it since it was rolled out.

What are two ways the administrator can get this information?

Choose 2 answers

- **A. Create a new view in Identity Verification History, specifying Method.**
- B. Open the Login Access Policies in Setup which shows how many users are using MFA.
- **C. Run a session setting report, specifying login methods by user.**
- D. The order of flow execution is unpredictable

Answer: A,C

Explanation:

Salesforce Authenticator is an app that allows users to verify their identity when logging in to Salesforce using two-factor authentication (2FA). 2FA adds an extra layer of security by requiring users to enter a verification code or approve a notification on their mobile device after entering their username and password.

To look at how many users have successfully used Salesforce Authenticator since it was rolled out, an administrator can use two ways:

* A) Run a session setting report, specifying login methods by user.

A session setting report is a report that shows information about users' login sessions, such as login time, location, IP address, browser, platform, etc. A session setting report can also show the login methods used by users, such as password, verification code, or notification. By running a session setting report, specifying login methods by user, an administrator can see how many users have used Salesforce Authenticator to log in to Salesforce. References: https://help.salesforce.com/s/articleView?id=sf.reports_session.htm&type=5

* C) Create a new view in Identity Verification History, specifying Method.

Identity Verification History is a page that shows the history of identity verification attempts for each user in the org. Identity verification history includes information such as date, time, status, method, and IP address of each attempt. By creating a new view in Identity Verification History, specifying Method as a filter criterion, an administrator can see how many users have used Salesforce Authenticator to verify their identity when logging in to Salesforce. References: https://help.salesforce.com/s/articleView?id=sf.identity_verification_history.htm&type=5

NEW QUESTION # 113

Leads come to Universal Containers from various sources and need to be assigned to the correct sales team.

When a lead comes from the APAC region, it can be passed to an external partner if the Sales Director approves the transfer. The partner's channel manager must be notified when the partner has been assigned the lead.

Which combination of automation tools is needed to meet minimally these requirements?

- A. Assignment rules and workflow rules

- B. Assignment rules, approval processes, and workflow rules
- C. Assignment rules and approval processes
- D. Assignment rules, auto-response rules, and workflow rules

Answer: B

NEW QUESTION # 114

An administrator has been tasked with sending an email notification to all project team members when project status is changed to Allocated. Project teams contain users from different departments and different roles. How should an administrator ensure the proper users will receive the email?

- A. Configure a queue for the project team and have members view the queue's list view.
- B. Use sharing rules to automatically share with the individual users in the project team.
- C. Create public groups for each project team and send the email alert to the project group.
- D. Move the project users to the same role and send the email alert to everyone in the role.

Answer: C

NEW QUESTION # 115

Which two permissions need to be enabled to set up entitlement management, including milestones, entitlement processes, and entitlement templates? (Choose two.)

- A. Customize Application
- B. Manage Entitlements
- C. Customize Entitlements
- D. Manage Milestones

Answer: A,B
