AWS-Solutions-Associate Relevant Questions & Study AWS-Solutions-Associate Plan

The passing rate of our AWS-Solutions-Associate training quiz is high as 98% to 100% and the hit rate is also high. Our professional expert team seizes the focus of the exam and chooses the most important questions and answers which has simplified the important information and follow the latest trend to make the client learn easily and efficiently on our AWS-Solutions-Associate Study Guide. You can also free download the demos of our AWS-Solutions-Associate learning materials to have a check.

Amazon AWS Certified Solutions Architect - Associate (SAA-C02) Sample Questions (Q258-Q263):

NEW QUESTION # 258

A company has applications that run on Amazon EC2 instances in a VPC. One of the applications needs to call the Amazon S3 API to store and read objects. According to the company's security regulations, no traffic from the applications is allowed to travel across the internet.

Which solution will meet these requirements?

- A. Create an S3 bucket in the same Region as the EC2 instance.
- B. Create an S3 bucket in a private subnet.
- C. **Configure an S3 gateway endpoint.**
- D. Configure an S3 interface endpoint.

Answer: C

Explanation:

<https://docs.aws.amazon.com/AmazonS3/latest/userguide/privatelink-interface-endpoints.html#types-of-vpc-endpoints-for-s3>

<https://docs.aws.amazon.com/vpc/latest/userguide/vpc-endpoints-s3.html>

NEW QUESTION # 259

The AWS CloudHSM service defines a resource known as a high-availability (HA) _____, which is a virtual partition that represents a group of partitions, typically distributed between several physical HSMs for high-availability.

- A. proxy group
- B. relational group
- **C. partition group**
- D. functional group

Answer: C

Explanation:

The AWS CloudHSM service defines a resource known as a high-availability (HA) partition group, which is a virtual partition that represents a group of partitions, typically distributed between several physical HSMs for high-availability.

Reference: <http://docs.aws.amazon.com/cloudhsm/latest/userguide/configuring-ha.html>

NEW QUESTION # 260

A company is planning to run a group of Amazon EC2 instances that connect to an Amazon Aurora database.

The company has built an AWS CloudFormation template to deploy the EC2 instances and the Aurora DB cluster. The company wants to allow the instances to authenticate to the database in a secure way. The company does not want to maintain static database credentials.

Which solution meets these requirements with the LEAST operational effort?

- **A. Create a database user with a user name and password. Store the user name and password in AWS Systems Manager Parameter Store. Configure the EC2 instances to retrieve the database credentials from Parameter Store.**
- B. Create a database user with a user name and password. Add parameters for the database user name and password to the CloudFormation template. Pass the parameters to the EC2 instances when the instances are launched.
- C. Configure the DB cluster to use IAM database authentication. Create a database user to use with IAM authentication. Associate a role with the EC2 instances to allow applications on the instances to access the database.
- D. Configure the DB cluster to use IAM database authentication with an IAM user. Create a database user that has a name that matches the IAM user. Associate the IAM user with the EC2 instances to allow applications on the instances to access the database.

Answer: A

NEW QUESTION # 261

Which system is used by Amazon Machine Images paravirtual (PV) virtualization during the boot process?

- A. PV-BOOT
- **B. PV-GRUB**
- C. PV-WORM
- D. PV-AMI

Answer: B

Explanation:

Explanation/Reference:

Explanation:

Amazon Machine Images that use paravirtual (PV) virtualization use a system called PV-GRUB during the boot process. PV-GRUB is a paravirtual boot loader that runs a patched version of GNU GRUB 0.97.

When you start an instance, PV-GRUB starts the boot process and then chain loads the kernel specified by your image's menu.lst file.

NEW QUESTION # 262

A company is hosting a three-tier ecommerce application in the AWS Cloud. The company hosts the website on Amazon S3 and integrates the website with an API that handles sales requests. The company hosts the API on three Amazon EC2 instances behind an Application Load Balancer (ALB). The API consists of static and dynamic front-end content along with backend workers that process sales requests asynchronously.

The company is expecting a significant and sudden increase in the number of sales requests during events for the launch of new products. What should a solutions architect recommend to ensure that all the requests are processed successfully?

- A. Add an Amazon CloudFront distribution for the dynamic content. Add an Amazon ElastiCache instance in front of the ALB to reduce traffic for the API to handle.
- **B. Add an Amazon CloudFront distribution for the static content. Add an Amazon Simple Queue Service (Amazon SOS) queue to receive requests from the website for later processing by the EC2 instances.**
- C. Add an Amazon CloudFront distribution for the static content. Place the EC2 instances in an Auto Scaling group to launch new instances based on network traffic.
- D. Add an Amazon CloudFront distribution for the dynamic content. Increase the number of EC2 instances to handle the increase in traffic.

Answer: B

NEW QUESTION # 263

.....

If you feel nervous about the exam, then you can try the AWS-Solutions-Associate test materials of us, we will help you pass the exam successfully. AWS-Solutions-Associate Soft test engine can stimulate the real exam environment, through this version, and you can have a better understanding what the real exam environment is like. Moreover, AWS-Solutions-Associate test materials are high-quality and they cover the most knowledge points of the exam, and you can have a good command of the exam. We provide you with free update for 365 days after purchasing, and the update version will be sent to your email address automatically.
