If you are finding a study material to prepare your exam, our material will end your search. Our ANS-C01 exam torrent has a high quality that you can't expect. I think our ANS-C01 prep torrent will help you save much time, and you will have more free time to do what you like to do. I can guarantee that you will have no regrets about using our ANS-C01 Test Braindumps. When the time for action arrives, stop thinking and go in, try our ANS-C01 exam torrent, you will find our products will be a very good choice for you to pass your exam and get your certificate in a short time.

Amazon AWS Certified Advanced Networking Specialty Exam Sample Questions (Q97-Q102):

NEW QUESTION # 97

A company has a hybrid IT architecture with two AWS Direct Connect connections to provide high availability. The services hosted on-premises are accessible using public IPs, and are also on the 172.16.0.0/16 range. The AWS resources are on the 192.168.0.0/18 range. The company wants to use Amazon Elastic Load Balancing for SSL offloading, health checks, and sticky sessions.

What should be done to meet these requirements?

Response:

- A. Create an Amazon CloudFront distribution for the on-premises service and use the public IPs of the on-premises servers as the origin.
- **B. Create an Application Load Balancer pointing to the on-premises server's private IP address.**
- C. Create a Network Load Balancer pointing to the on-premises server's private IP address.
- D. Create a Network Load Balancer pointing to the on-premises server's public IP address.

Answer: B

NEW QUESTION # 98

Convert the following IPv4 address presented in binary form, into dotted decimal form

10101100.01111011.00001101.10011101.

Response:

- **A. 172.123.13.157**
- B. 172.122.13.15
- C. 172.124.13.57
- D. 173.13.13.157

Answer: A

NEW QUESTION # 99

An IoT company collects data from thousands of sensors that are deployed in the United States and South Asia. The sensors use a proprietary communication protocol that is built on UDP to send the data to a fleet of Amazon EC2 instances. The instances are in an Auto Scaling group and run behind a Network Load Balancer (NLB). The instances, Auto Scaling group, and NLB are deployed in the us-west-2 Region.

Occasionally, the data from the sensors in South Asia gets lost in transit over the internet and does not reach the EC2 instances.

Which solutions will resolve this issue? (Choose two.)

- A. Create a second deployment of the EC2 instances and the NLB in the ap-south-1 Region. Use an Amazon Route 53 failover routing policy to resolve to an alternate Region in case packets are dropped.
- B. Create an Amazon CloudFront distribution. Specify the existing NLB as the origin.
- C. Turn on enhanced networking on the EC2 instances by using the most recent Elastic Network Adapter (ENA) drivers.
- **D. Use AWS Global Accelerator with the existing NLB.**
- **E. Create a second deployment of the EC2 instances and the NLB in the ap-south-1 Region. Use an Amazon Route 53 latency routing policy to resolve to the Region that provides the least latency.**

Answer: D,E

NEW QUESTION # 100

A company is growing rapidly. Data transfers between the company's on-premises systems and Amazon EC2 instances that run in VPCs are limited by the throughput of a single AWS Site-to-Site VPN connection between the company's on-premises data center firewall and an AWS Transit Gateway.

A network engineer must resolve the throttling by designing a solution that is highly available and secure. The solution also must scale the VPN throughput from on-premises to the VPC resources to support the increase in traffic.

Which solution will meet these requirements?

- A. Configure a new Site-to-Site VPN connection to the transit gateway. Enable acceleration for the Site-to-Site VPN connection.
- **B. Configure multiple dynamic BGP-based Site-to-Site VPN connections to the transit gateway. Configure equal-cost multi-path routing.**
- C. Configure a software appliance-based VPN connection over the internet from the on-premises firewall to an EC2 instance that has a large instance size and networking capabilities.
- D. Configure multiple static routing-based Site-to-Site VPN connections to the transit gateway. Configure equal-cost multi-path routing.

Answer: B

NEW QUESTION # 101

A network engineer must provide additional safeguards to protect encrypted data at Application Load Balancers (ALBs) through the use of a unique random session key.

What should the network engineer do to meet this requirement?

- A. Change the ALB security policy to a policy that supports TLS 1.2 protocol only
- B. Use AWS Key Management Service (AWS KMS) to encrypt session keys
- C. Associate an AWS WAF web ACL with the ALBs, and create a security rule to enforce forward secrecy (FS)
- **D. Change the ALB security policy to a policy that supports forward secrecy (FS)**

Answer: D
