## Quiz Authoritative Google - Associate-Google-Workspace-Administrator - Exam Associate Google Workspace Administrator Registration

One of the most important functions of our APP online version which is contained in our Associate-Google-Workspace-Administrator preparation questions are that can support almost all electronic equipment, including the computer, mobile phone and so on. If you want to prepare for your exam by the computer, you can buy our Associate-Google-Workspace-Administrator training quiz, because our products can work well by the computer. Of course, if you prefer to study by your mobile phone, our Associate-Google-Workspace-Administrator study materials also can meet your demand.

## Google Associate Google Workspace Administrator Sample Questions (Q88-Q93):

### NEW QUESTION # 88

A department at your company wants access to the latest AI-powered features in Google Workspace. You know that Gemini offers

advanced capabilities and you need to provide the department with immediate access to Gemini's features while retaining control over its deployment to ensure that corporate data is not available for human review. What should you do?

- A. Enable Gemini for non-licensed users in that department so they have immediate access to the free service.
- **B. Enable Gemini for the department's organizational unit and assign Gemini licenses to users in the department.**
- C. Monitor Gemini adoption through the administrator console and wait for wider user adoption before assigning licenses.
- D. Enable Alpha features for the organization and assign Gemini licenses to all users.

**Answer: B**

Explanation:

To provide a specific department with immediate access to Gemini's features in Google Workspace while maintaining control and ensuring corporate data privacy, you need to enable Gemini for that department's organizational unit and assign the necessary licenses to the users within that OU. This approach allows for targeted deployment and ensures that the features are used within the governed Google Workspace environment.

Here's why option A is correct and why the others are not the appropriate solutions:

A . Enable Gemini for the department's organizational unit and assign Gemini licenses to users in the department.

Google Workspace allows administrators to manage services and features at the organizational unit (OU) level. By enabling Gemini specifically for the OU of the department that needs it, you grant access only to those users. Assigning Gemini licenses ensures that they have the required entitlements to use the advanced AI features. Importantly, when Gemini is enabled and used within a Google Workspace account with the appropriate controls, the data generated is governed by Google Workspace's data privacy and security commitments, ensuring corporate data is not available for human review in a way that compromises privacy. Administrators have controls over how Gemini for Workspace interacts with organizational data.

Associate Google Workspace Administrator topics guides or documents reference: The Google Workspace Admin Help documentation on "Turn Gemini for Google Workspace on or off for users" (or similar titles) explains how to control access to Gemini features at the organizational unit or group level. It also details the licensing requirements for Gemini for Workspace and how to assign these licenses to specific users. Furthermore, documentation on "Data privacy and security in Gemini for Google Workspace" outlines how user data is handled and protected when using these features within a Google Workspace environment, emphasizing controls to prevent inappropriate human review of corporate data.

B . Monitor Gemini adoption through the administrator console and wait for wider user adoption before assigning licenses.

This approach delays providing the requested access to the department that needs Gemini immediately. Monitoring adoption might be useful for broader rollouts, but it doesn't address the immediate need of the specific department.

Associate Google Workspace Administrator topics guides or documents reference: While the Admin console provides insights into usage and adoption of various Google Workspace services, it doesn't serve as the primary mechanism for granting initial access to new features like Gemini for specific teams.

C . Enable Gemini for non-licensed users in that department so they have immediate access to the free service.

There isn't a "free service" of Gemini directly integrated within Google Workspace that bypasses licensing and organizational controls in the way this option suggests. Gemini for Google Workspace is a licensed feature that needs to be enabled and assigned by the administrator. Enabling features for "non-licensed users" in a corporate environment without proper governance is not a standard or secure practice. It would likely mean users are accessing a consumer version of Gemini, which would not be subject to the same data privacy and security controls as the licensed Google Workspace version, potentially exposing corporate data to human review outside of the organization's policies.

Associate Google Workspace Administrator topics guides or documents reference: Google's documentation on Gemini for Workspace clearly outlines the licensing requirements and the integration within the Google Workspace environment, emphasizing administrative control over its deployment and usage.

D . Enable Alpha features for the organization and assign Gemini licenses to all users.

Enabling Alpha features for the entire organization carries significant risks as these features are still under development and may not be stable or fully secure. Assigning Gemini licenses to all users when only one department needs it is an unnecessary cost and expands the deployment before proper evaluation and targeted rollout. It also doesn't specifically address the need to limit access to the requesting department initially.

Associate Google Workspace Administrator topics guides or documents reference: Google's guidelines on release channels (Rapid, Scheduled, Alpha/Beta) strongly advise against enabling pre-release features like Alpha for production environments due to potential instability and lack of full support. Controlled rollouts to specific OUs are recommended for new features.

Therefore, the most appropriate action is to enable Gemini for the specific organizational unit of the requesting department and assign Gemini licenses to the users within that OU. This provides immediate access while maintaining administrative control and ensuring that the usage of AI features within the Google Workspace environment adheres to the organization's data privacy policies.

## NEW QUESTION # 89

During a recent Google Meet video conference, several employees reported that they could not hear the presenters. The presenters confirmed that their laptops' microphones were working. The affected employees were all using company-issued laptops. You need

to quickly diagnose the source of the issue. What should you do first?

- A. Check the Admin console to determine whether there are recent Meet-related notifications or alerts.
- **B. Verify that the audio drivers on the affected laptops are up-to-date and functioning correctly.**
- C. Use the Meet quality tool for each affected user to analyze their microphone settings and configurations during the meeting.
- D. Check if Context-Aware access rules were set to prevent Meet access from the user's network location.

**Answer: B**

Explanation:

Since the presenters' microphones are working, the issue likely lies with the affected employees' laptops. The first step in diagnosing the problem is to verify that the audio drivers on the affected laptops are up-to-date and functioning correctly. Outdated or malfunctioning audio drivers can cause issues with hearing sound during video conferences. Once the drivers are confirmed to be functional, further troubleshooting steps can be taken if necessary.

#### NEW QUESTION # 90

An employee is leaving your company and has numerous files stored in My Drive. Their manager wants to retain access to these files. You need to offboard the departing employee's Google Workspace account while ensuring that the manager can still access the files while following Google-recommended practices. What should you do?

- A. Use Google Vault to establish a retention policy for the organizational unit (OU) of the departing employee. Assign the Google Archived User license.
- **B. Transfer ownership of the departing employee's files to the manager during the user deletion process.**
- C. Instruct the departing employee to share their My Drive folder with the manager before leaving. Delete the Google Workspace account on the departing employee's last day.
- D. Download the departing employee's Drive data by using Google Takeout. Upload the data to the manager's Drive before deleting the departing employee's Google Workspace account.

**Answer: B**

Explanation:

Transferring ownership of the departing employee's files to the manager ensures that the manager retains access to all the files, including those stored in My Drive, without requiring additional steps like downloading or sharing files. This method follows Google-recommended practices and ensures that the files remain under proper management even after the employee's account is deleted. This process can be done efficiently during the offboarding process to ensure continuity of access.

#### NEW QUESTION # 91

You've noticed an increase in phishing emails that contain links to malicious files hosted on external Google Drives. These files often mimic legitimate documents and trick users into granting access to their accounts. You need to prevent users from accessing these malicious external Drive files, but allow them to access legitimate external files. What should you do? (Choose two.)

- A. Deploy advanced malware detection software on all user devices to scan and block malicious files.
- B. Enforce stricter password policies.
- **C. Conduct regular security awareness training to educate users.**
- **D. Create a Drive trust rule that blocks all external domains except for a pre-approved list of trusted partners.**

**Answer: C,D**

Explanation:

E Implement two-factor authentication for all users

Explanation:

Conduct regular security awareness training to educate users: Educating users about phishing threats and safe online practices can help them recognize and avoid phishing attempts, reducing the chances of them falling for such scams.

Create a Drive trust rule that blocks all external domains except for a pre-approved list of trusted partners: By setting up a Drive trust rule to limit access to files from external domains, you can block links to malicious files hosted on untrusted external Google Drives while still allowing access to legitimate external files from trusted sources.

#### NEW QUESTION # 92

A user in your organization reported that their internal event recipient is not receiving the Calendar event invites. You need to identify the source of this problem. What should you do?

- A. Check whether the business hours are set up in the event recipient's Calendar settings.
- B. Check whether the Calendar event has more than 50 guests.
- **C. Check whether the event recipient has turned off their email notifications for new events in their Calendar settings.**
- D. Check whether the event recipient has turned off their email notifications for new events in their Calendar settings.
- E. Check if Calendar service is turned off for the event creator.

**Answer: C**

Explanation:

Google Calendar allows users to configure various notification settings, including whether they receive email notifications for new events, changes to events, reminders, etc. If the recipient has disabled email notifications for new events, they would not receive the invites in their inbox, even though the event might be correctly added to their Calendar.

Associate Google Workspace Administrator topics guides or documents reference: The official Google Calendar Help documentation for users, such as "Change notification settings," explains how users can customize their event notifications. This includes options to turn off email notifications for new events. While administrators don't directly manage individual user's notification settings, understanding these user-level controls is crucial for troubleshooting. An administrator might guide the user to check these settings.

A . Check whether the business hours are set up in the event recipient's Calendar settings.

Business hours in Google Calendar primarily affect meeting scheduling suggestions and how a user's availability is displayed to others. They do not directly prevent a user from receiving event invitations. Whether or not a recipient has configured their business hours will not stop the email notification for a new event from being sent (unless perhaps in very specific and unusual edge cases related to resource scheduling, which isn't indicated here).

Associate Google Workspace Administrator topics guides or documents reference: The Google Calendar Help documentation on "Set your working hours and location" explains the purpose of business hours, which is related to availability and scheduling, not the receipt of invitations.

B . Check if Calendar service is turned off for the event creator.

If the Calendar service is turned off for the event creator, they would not be able to create or send any Calendar events in the first place. Since the user created and sent the invite (as mentioned by the recipient not receiving it), the Calendar service must be active for the creator.

Associate Google Workspace Administrator topics guides or documents reference: The Google Workspace Admin Help documentation on "Turn Google Calendar on or off for users" explains how administrators can control access to the Calendar service. If the service is off for a user, they would not have Calendar functionality.

C . Check whether the Calendar event has more than 50 guests.

While there might be limitations on the number of guests that can be added to a single Calendar event, exceeding this limit typically results in an error message for the event creator during the invitation process, not a failure of the recipient to receive the invite. Even if there were such a limit affecting receipt (which is not a common documented issue for internal users within reasonable limits), it wouldn't be the first thing to check.

Associate Google Workspace Administrator topics guides or documents reference: Google Calendar Help documentation might mention limits on the number of guests, but these limits usually pertain to the ability to add guests, send updates, or view responses, not a complete failure of delivery to some recipients within the organization.

Therefore, the most logical first step in troubleshooting why an internal recipient isn't receiving Calendar event invites is to have the recipient check their own Calendar notification settings to ensure that email notifications for new events are enabled.

Explanation:

When an internal user reports not receiving Google Calendar event invites, the most likely immediate cause to investigate on the recipient's end is their notification settings within Google Calendar. Users can customize their notification preferences, and it's possible they have turned off email notifications for new events.

Here's why option D is the most relevant first step and why the other options are less likely to be the primary cause of this specific issue:

## NEW QUESTION # 93

.....

We hope you can find the information you need at any time while using our Associate-Google-Workspace-Administrator study materials. In addition to the content updates, our system will also be updated for the Associate-Google-Workspace-Administrator training materials. If you have any opinions, you can tell us that our common goal is to create a product that users are satisfied with. We have three different Associate-Google-Workspace-Administrator Exam Braindumps for you to choose: the PDF, Software and APP online. And the varied displays can help you study at any time and condition.
