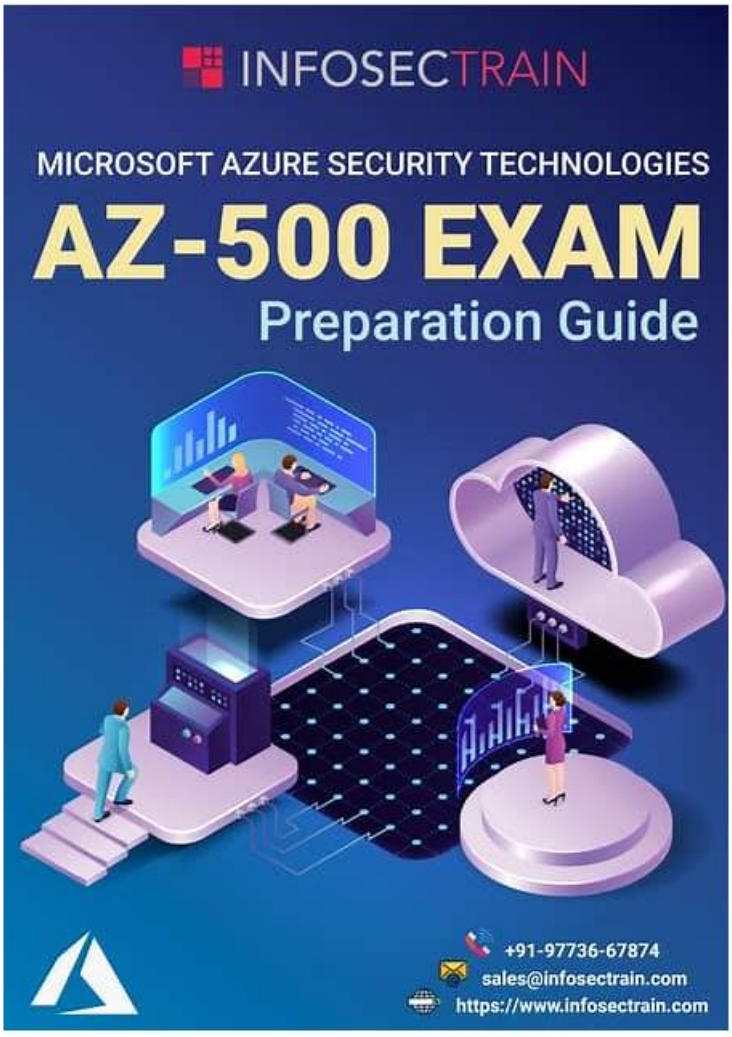
Exam AZ-500 Preview - AZ-500 Latest Real Exam



P.S. Free 2025 Microsoft AZ-500 dumps are available on Google Drive shared by PDF4Test: https://drive.google.com/open?id=1D-bZNOq3cEZYpuOEagp--veIzfdAS39B

We hope that you can use your time as much as possible for learning on the AZ-500 practice questions. So we have considered every detail of the AZ-500 study guide to remove all unnecessary programs. If you try to downoad our AZ-500 study materials, you will find that they are so efficient! And even you free download the demos on the website, you can feel the convenience and efficiency. It is simple and easy to study with our AZ-500 learning braindumps.

To pass the Microsoft AZ-500 Exam, candidates need to have a strong understanding of Azure security technologies and best practices. They should be able to identify and mitigate security risks, implement security controls, and monitor and respond to security incidents. In addition, candidates should have hands-on experience with Azure security tools and services, such as Azure Security Center, Azure Active Directory, Azure Information Protection, and Azure Key Vault. By obtaining this certification, professionals can enhance their career prospects and demonstrate their expertise in Azure security to potential employers.

AZ-500 Latest Real Exam, Test AZ-500 Registration

If you have the AZ-500 certification, it will be very easy for you to achieve your dream. But it is not an easy thing for many candidates to pass the AZ-500 exam. By chance, our company can help you solve the problem and get your certification, because our company has compiled the AZ-500 question torrent that not only have high quality but also have high pass rate. We believe that

our AZ-500 exam questions will help you get the certification in the shortest. So hurry to buy our AZ-500 exam torrent, you will like our products.

Microsoft Azure Security Technologies Sample Questions (Q195-Q200):

NEW QUESTION # 195
You have an Azure subscription that contains the key vaults shown in the following table.

Name	Days to retain deleted vaults	Purge protection	Permission model
KeyVault1	10	Enabled	Azure role-based access control (Azure RBAC)
KeyVault2	15	Disabled	Azure role-based access control (Azure RBAC)

The subscription contains the users shown in the following table.

Name	Role	Assigned to
Admin1	Key Vault Contributor	KeyVault1
Admin2	Key Vault Secrets Officer	KeyVault2
Admin3	Key Vault Administrator	KeyVault1

On June 1, you perform the following actions:
* Delete a key named key1 from KeyVault1.
* Delete a secret named secret 1 from KeyVault2.
For each of the following statements, select Yes if the statement is true. Otherwise, select No.

Statements	Yes	No
Admin1 can recover key1 on June 5.	○	○
Admin2 can purge secret1 on June 12.	○	○
Admin3 can recover key1 on June 17.	○	○

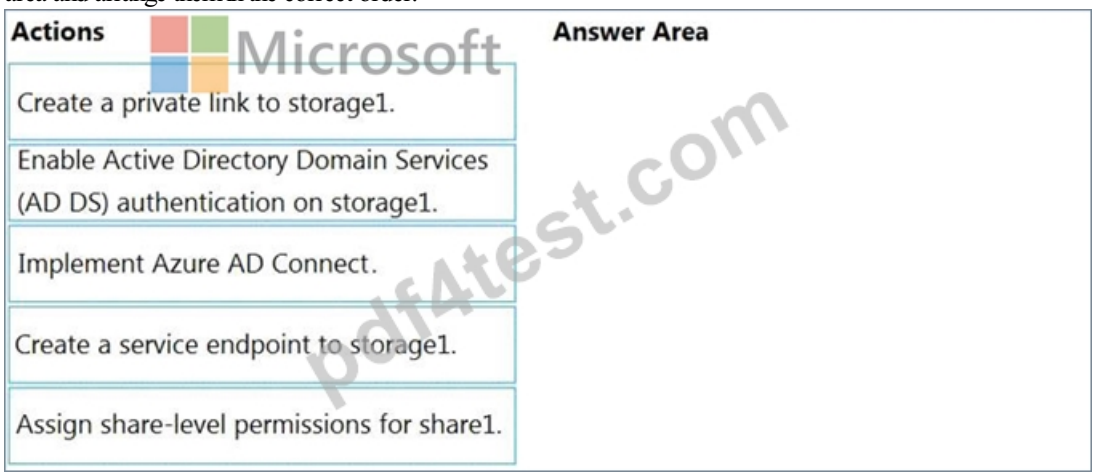
Answer:

Explanation:

Statements	Yes	No
Admin1 can recover key1 on June 5.	○	○
Admin2 can purge secret1 on June 12.	○	○
Admin3 can recover key1 on June 17.	○	○

NEW QUESTION # 196
Your network contains an on-premises Active Directory domain named contoso.com. The domain contains a user named User1.
You have an Azure subscription that is linked to an Azure Active Directory (Azure AD) tenant named contoso.com. The tenant contains an Azure Storage account named storage1. Storage1 contains an Azure file share named share1.
Currently, the domain and the tenant are not integrated.

You need to ensure that User1 can access share1 by using his domain credentials.
Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.



Answer:

Explanation:

NEW QUESTION # 197
You have an Azure subscription that contains the virtual machines shown in the following table.

Name	Resource group	Status
VM1	RG1	Stopped (Deallocated)
VM2	RG2	Stopped (Deallocated)

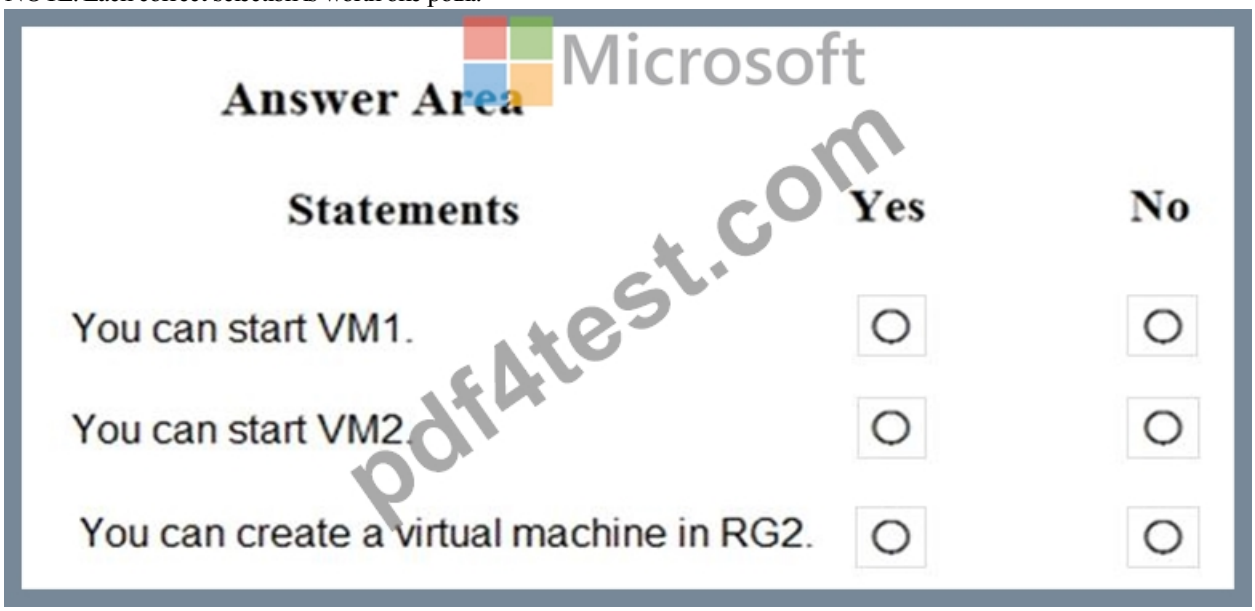
You create the Azure policies shown in the following table.

Policy definition	Resource type	Scope
Not allowed resource types	virtualMachines	RG1
Allowed resource types	virtualMachines	RG2

You create the resource locks shown in the following table.

Name	Type	Created on
Lock1	Read-only	VM1
Lock2	Read-only	RG2

For each of the following statements, select Yes if the statement is true. Otherwise, select No.
NOTE: Each correct selection is worth one point.



Answer:

Explanation:

https://docs.microsoft.com/en-us/azure/governance/blueprints/concepts/resource-locking

NEW QUESTION # 198
You have an Azure Active Directory (Azure AD) tenant that contains the users shown in the following table.

Name	Member of	Multi-factor authentication (MFA) status
User1	Group1, Group2	Disabled
User2	Group2	Disabled

The tenant contains the named locations shown in the following table.

Name	IP address range	Trusted location
Seattle	193.77.10.0/24	Yes
Boston	154.12.18.0/24	No

You create the conditional access policies for a cloud app named App1 as shown in the following table.

Name	Include	Exclude	Condition	Grant
Policy1	Group1	Group2	Locations: Boston	Block access
Policy2	Group1	None	Locations: Any location	Grant access, Require multi-factor authentication
Policy3	Group2	Group1	Locations: Boston	Block access
Policy4	User2	None	Locations: Any location	Grant access, Require multi-factor authentication

For each of the following statements, select Yes if the statement is true. Otherwise, select No.
NOTE: Each correct selection is worth one point.

Answer Area

Statements	Yes	No
User1 can access App1 from an IP address of 154.12.18.10.	○	○
User2 can access App1 from an IP address of 193.77.10.15.	○	○
User2 can access App1 from an IP address of 154.12.18.34.	○	○

Answer:

Explanation:

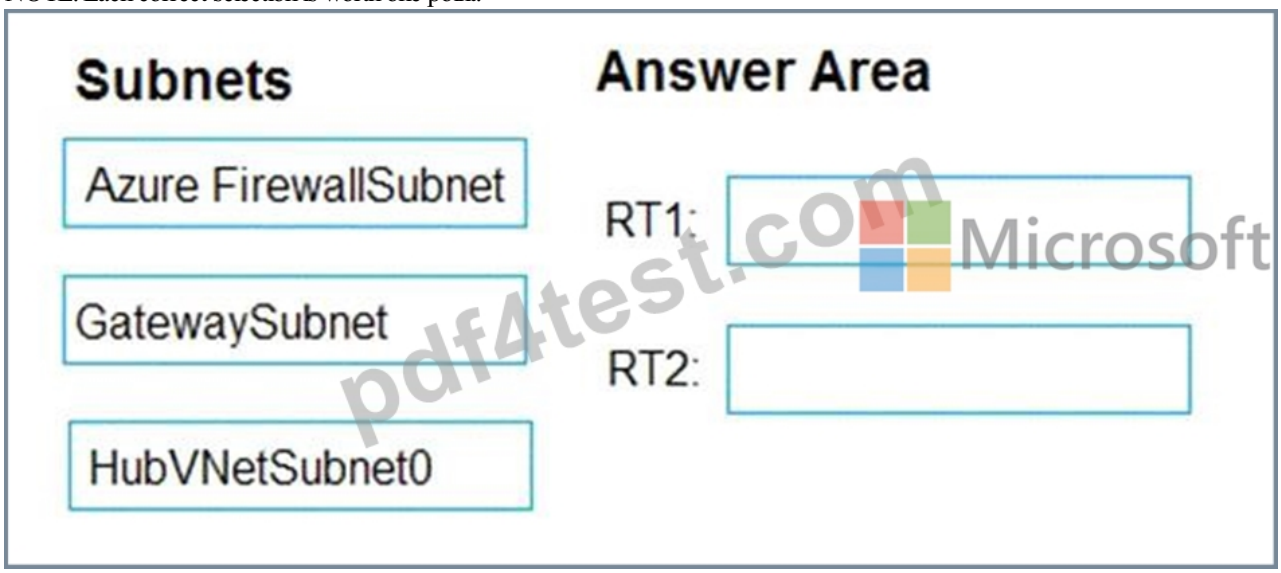
Answer Area

Statements	Yes	No
User1 can access App1 from an IP address of 154.12.18.10.	○	○
User2 can access App1 from an IP address of 193.77.10.15.	○	○
User2 can access App1 from an IP address of 154.12.18.34.	○	○

NEW QUESTION # 199
You have an Azure subscription that contains the virtual networks shown in the following table.

Name	Region	Description
HubVNet	East US	HubVNet is a virtual network connected to the on-premises network by using a site-to-site VPN that has BGP route propagation enabled. HubVNet contains a subnet named HubVNetSubnet0.
SpokeVNet	East US	SpokeVNet is a virtual network connected to HubVNet by using VNet peering. SpokeVNet contains a subnet named SpokeVNetSubnet0.

The Azure virtual machines on SpokeVNetSubnet0 can communicate with the computers on the on-premises network.
You plan to deploy an Azure firewall to HubVNet.
You create the following two routing tables:
RT1: Includes a user-defined route that points to the private IP address of the Azure firewall as a next hop address RT2: Disables BGP route propagation and defines the private IP address of the Azure firewall as the default gateway You need to ensure that traffic between SpokeVNetSubnet0 and the on-premises network flows through the Azure firewall.
To which subnet should you associate each route table? To answer, drag the appropriate subnets to the correct route tables. Each subnet may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.
NOTE: Each correct selection is worth one point.



Answer:
