# Exam C-BW4H-2404 Dumps | C-BW4H-2404 Reliable Dumps Pdf

P.S. Free & New C-BW4H-2404 dumps are available on Google Drive shared by PrepAwayETE: https://drive.google.com/open?id=1Q\_th\_cs7pNn3cbw6jYF7u5pmUr0HRviT

Our SAP Certified Associate - Data Engineer - Data Fabric (C-BW4H-2404) practice exam can be modified in terms of length of time and number of questions to help you prepare for the SAP real test. We're certain that our C-BW4H-2404 Questions are quite similar to those on C-BW4H-2404 real exam since we regularly update and refine the product based on the latest exam content.

By Finishing the SAP Certified Associate - Data Engineer - Data Fabric exam, you will save your work and even change to another better door way. By and by, it is not difficult to do SAP C-BW4H-2404 dumps as you would confront two or three inconveniences during the trip. By utilizing SAP C-BW4H-2404 Dumps, it is especially simple to appear at your goal. We can equip you with explicit tips that could show you the fundamental method for doing battling the difficulties and draw a definite guide toward your objective for the SAP Certified Associate - Data Engineer - Data Fabric exam.

>> Exam C-BW4H-2404 Dumps <<

### C-BW4H-2404 Reliable Dumps Pdf, C-BW4H-2404 New Test Materials

We provide SAP Certified Associate - Data Engineer - Data Fabric C-BW4H-2404 web-based self-assessment practice software that will help you to prepare for the C-BW4H-2404 certification exam SAP Certified Associate - Data Engineer - Data Fabric C-BW4H-2404 Web-based software offers computer-based assessment solutions to help you automate the SAP C-BW4H-2404 exam testing procedure. The stylish and user-friendly interface works with all browsers, including Google Chrome, Opera, Safari, and Internet Explorer. It will make your certification exam preparation simple, quick, and smart. So, rest certain that you will discover all you need to study for and pass the SAP Certified Associate - Data Engineer - Data Fabric C-BW4H-2404 Exam on

## SAP C-BW4H-2404 Exam Syllabus Topics:

Topic	Details
Topic 1	Performance Optimization: This section scrutinizes elements associated with enhancing system efficiency.
Topic 2	<ul> <li>SAP BW</li> <li>4HANA Project and the Modeling Process: This segment offers direction on orchestrating SAP BW</li> <li>4HANA initiatives.</li> </ul>
Topic 3	<ul> <li>Data Governance, Security, and Authorization: This part concentrates on safeguarding assets and information within SAP BW</li> <li>4HANA and SAP HANA ecosystems.</li> </ul>
Topic 4	SAP BW Query Design: This portion encompasses the development and implementation of BW queries in the SAP BW     4HANA environment.
Topic 5	<ul> <li>Data Modeling and Design: This segment delves into the attributes and features of modeling entities within SAP BW</li> <li>4HANA and SAP HANA HDI frameworks.</li> </ul>
Торіс 6	Data Acquisition into SAP BW     4HANA: This section addresses the incorporation of diverse data origins into SAP BW     4HANA and the methodologies for data ingestion.

# SAP Certified Associate - Data Engineer - Data Fabric Sample Questions (Q16-Q21):

#### **NEW QUESTION # 16**

You want to build an SAP HANA HDI calculation view of data category CUBE, but you get the "no measure defined" error. For the business requirement, a measure does not make sense.

Besides changing the data category to DIMENSION, what do you have to do?

- A. Switch from a projection node to a star join node
- B. Switch from an aggregation node to a projection node
- C. Switch form a projection node to an aggregation node
- D. Switch from an aggregation node to a star join node

#### Answer: B

#### **NEW QUESTION #17**

What are prerequisites for S-API Extractors to load data directly into SAP Datasphere core tenant using delta mode? Note: There are 2 correct answers to this question.

- A. A primary key needs to exist.
- B. Real-time access needs to be enabled
- C. Extractor must be based on a function module
- D. Operational Data Provisioning (ODP) must be enabled

#### Answer: A,D

#### Explanation:

To load data directly into SAP Datasphere (formerly known as SAP Data Warehouse Cloud) core tenant using delta mode via S-API Extractors, certain prerequisites must be met. Let's evaluate each option:

\* Option A: Real-time access needs to be enabled. Real-time access is not a prerequisite for delta mode loading. Delta mode

focuses on incremental data extraction and loading, which does not necessarily require real-time capabilities. Real-time access is more relevant for scenarios where immediate data availability is critical.

- \* Option B: A primary key needs to exist. A primary key is essential for delta mode loading because it uniquely identifies records in the source system. Without a primary key, the system cannot determine which records have changed or been added since the last extraction, making delta processing impossible.
- \* Option C: Extractor must be based on a function module. While many S-API Extractors are based on function modules, this is not a strict requirement for delta mode loading. Extractors can also be based on other mechanisms, such as views or tables, as long as they support delta extraction.
- \* Option D: Operational Data Provisioning (ODP) must be enabled. ODP is a critical prerequisite for delta mode loading. It provides the infrastructure for managing and extracting data incrementally from SAP source systems. Without ODP, the system cannot track changes or deltas effectively, making delta mode loading infeasible.
- \* SAP Datasphere Documentation: Outlines the prerequisites for integrating data from SAP source systems using delta mode.
- \* SAP Help Portal: Provides detailed information on S-API Extractors and their requirements for delta processing.
- \* SAP Best Practices for Data Integration: Highlights the importance of primary keys and ODP in enabling efficient delta extraction. References:In conclusion, the two prerequisites for S-API Extractors to load data into SAP Datasphere core tenant using delta mode are the existence of aprimary keyand the enabling of Operational Data Provisioning (ODP).

#### **NEW QUESTION #18**

How does SAP position SAP Datasphere in supporting business users? Note: There are 3 correct answers to this question.

- A. Business users can create agile models from different sources.
- B. Business users can upload their own CSV files.
- C. Business users can allocate system resources without IT involvement.
- D. Business users can leverage embedded analytic Fiori apps for data analysis.
- E. Business users can create restricted calculated columns based on existing models.

#### Answer: A,B,E

#### Explanation:

- \* Agile Models (Answer A):
- \* SAP Datasphere empowers business users to connect multiple data sources and create flexible, user-friendly models without IT dependencies.
- \* Restricted Calculated Columns (Answer D):
- \* Users can define restricted or calculated columns for advanced analytics using existing data models, enhancing decision-making capabilities.
- \* CSV Uploads (Answer E):
- \* The platform allows users to directly upload external data sources, such as CSV files, to enrich their analysis and models.
- \* Fiori Apps (Option B): Embedded Fiori apps are related to transactional systems, not Datasphere modeling.
- \* System Resource Allocation (Option C):Resource allocation typically requires IT involvement.

Incorrect Options:References:

\* SAP Datasphere User Guide

#### **NEW QUESTION #19**

Which of the following factors apply to Model Transfer in the context of Semantic Onboarding? Note: There are 2 correct answers to this question.

- A. Model Transfer can be leveraged from an On-premise environment to the cloud the other way around.
- B. SAP S/4HANA Model Transfer leverages ABAP CDS views for model generation in SAP Datasphere.
- C. SAP BW bridge Model Transfer leverages BW Modeling tools to import entities into native SAP Datasphere.
- D. SAP BW/4HANA Model Transfer leverages BW Queries for model generation in SAP Datasphere.

#### Answer: A,B

#### Explanation:

- \* Semantic Onboarding: Semantic Onboarding refers to the process of transferring data models and their semantics from one system to another (e.g., from on-premise systems like SAP BW/4HANA or SAP S
- /4HANA to cloud-based systems like SAP Datasphere). This ensures that the semantic context of the data is preserved during the transfer.
- \* Model Transfer: Model Transfer involves exporting data models from a source system and importing them into a target system. It

supports seamless integration between on-premise and cloud environments.

- \* SAP Datasphere: SAP Datasphere (formerly known as SAP Data Warehouse Cloud) is a cloud-based solution for data modeling, integration, and analytics. It allows users to import models from various sources, including SAP BW/4HANA and SAP S/4HANA.
- \* A. SAP BW/4HANA Model Transfer leverages BW Queries for model generation in SAP Datasphere:

This statement is incorrect. While SAP BW/4HANA Model Transfer can transfer data models to SAP Datasphere, it does not rely on BW Queries for model generation. Instead, it transfers the underlying metadata and structures (e.g., InfoProviders, transformations) directly.

- \* B. Model Transfer can be leveraged from an On-premise environment to the cloud the other way around: This statement is correct. Model Transfer supports bidirectional movement of models between on-premise systems (e.g., SAP BW/4HANA) and cloud-based systems (e.g., SAP Datasphere). This flexibility allows organizations to integrate their on-premise and cloud landscapes seamlessly.
- \* C. SAP BW bridge Model Transfer leverages BW Modeling tools to import entities into native SAP Datasphere: This statement is incorrect. The SAP BW bridge is primarily used to connect SAP BW
- /4HANA with SAP Datasphere, but it does not leverage BW Modeling tools to import entities into SAP Datasphere. Instead, it focuses on enabling real-time data replication and virtual access.
- \* D. SAP S/4HANA Model Transfer leverages ABAP CDS views for model generation in SAP Datasphere: This statement iscorrect. SAP S/4HANA Model Transfer uses ABAP Core Data Services (CDS) views to generate models in SAP Datasphere. ABAP CDS views encapsulate the semantic definitions of data in SAP S/4HANA, making them ideal for transferring models to the cloud.
- \* B: Model Transfer supports bidirectional movement between on-premise and cloud environments, ensuring flexibility in hybrid landscapes.
- \* D: ABAP CDS views are a key component of SAP S/4HANA's semantic layer, and they play a critical role in transferring models to SAP Datasphere.
- \* SAP Datasphere Documentation: The official documentation outlines the capabilities of Model Transfer and its support for bidirectional movement.
- \* SAP Note on Semantic Onboarding: Notes such as 3089751 provide details on how models are transferred between systems.
- \* SAP Best Practices for Hybrid Integration: These guidelines highlight the use of ABAP CDS views for model generation in SAP Datasphere.

Key Concepts: Analysis of Each Option: Why These Answers Are Correct: References: By leveraging Model Transfer, organizations can ensure seamless integration of their data models across on-premise and cloud environments

#### **NEW QUESTION #20**

How can you protect all InfoProviders against displaying their data?

- A. By flagging the characteristic 0INFOPROV as authorization-relevant
- B. By flagging the characteristic OTCAIPROV as authorization-relevant
- C. By flagging all InfoAreas as authorization-relevant
- D. By flagging all InfoProviders as authorization-relevant

#### Answer: B

#### Explanation:

To protect all InfoProviders against displaying their data, you need to ensure that access to the InfoProviders is controlled through authorization mechanisms. Let's evaluate each option:

- \* Option A: By flagging all InfoProviders as authorization-relevantThis is incorrect. While individual InfoProviders can be flagged as authorization-relevant, this approach is not scalable or efficient when you want to protect all InfoProviders. It would require manually configuring each InfoProvider, which is time-consuming and error-prone.
- \* Option B: By flagging the characteristic OTCAIPROV as authorization-relevantThis is correct. The characteristicOTCAIPROVrepresents the technical name of the InfoProvider in SAP BW/4HANA. By flagging this characteristic as authorization-relevant, you can enforce access restrictions at the InfoProvider level across the entire system. This ensures that users must have the appropriate authorization to access any InfoProvider.
- \* Option C: By flagging all InfoAreas as authorization-relevant This is incorrect. Flagging InfoAreas as authorization-relevant controls access to the logical grouping of InfoProviders but does not provide granular protection for individual InfoProviders. Additionally, this approach does not cover all scenarios where InfoProviders might exist outside of InfoAreas.
- \* Option D: By flagging the characteristic 0INFOPROV as authorization-relevant This is incorrect. The characteristic 0INFOPROV is not used for enforcing InfoProvider-level authorizations. Instead, it is typically used in reporting contexts to display the technical name of the InfoProvider.
- \* SAP BW/4HANA Security Guide: Describes how to use the characteristic OTCAIPROV for authorization purposes.
- \* SAP Help Portal: Provides detailed steps for configuring authorization-relevant characteristics in SAP BW/4HANA.
- \* SAP Best Practices for Security: Highlights the importance of protecting InfoProviders and the role of

0TCAIPROV in securing data.

References:In conclusion, the correct answer isB, as flagging the characteristic0TCAIPROVas authorization- relevant ensures comprehensive protection for all InfoProviders in the system.

#### **NEW QUESTION #21**
