

Exam C_ACDET_2506 Cram Questions & C_ACDET_2506 Test Cram Review

EXAM CRAM NCLEX-PN PRACTICE QUESTIONS AND ANSWERS 2023

A+

the nurse is caring for a client scheduled for removal of a pituitary tumor using the transsphenoidal approach. the nurse should be particularly alert to:

- A. Nasal congestion
- B. Abdominal Tenderness
- C. Muscle Tetany
- D. Oliguria - Answer-A. Nasal congestion

why?

removal of the pituitary gland is usually done by transsphenoidal approach through the nose. Nasal congestion further interferes with the airway.

A client with cancer is admitted to the oncology unit. Stat lab values reveal Hgb 12.6, WBC 6500, K⁺1.9, uric acid 7.0, Na⁺136, and platelets 178,000. The nurse evaluates that the client is experiencing which of the following?

- A. Hyponatremia
- B. Hypokalemia
- C. Myelosuppression
- D. Leukocytosis - Answer-B. Hypokalemia

why?

Hypokalemia is evident from the lab values listed. The other laboratory findings are within normal limits. making answers A,C and D incorrect

A 24 year-old female client is scheduled for surgery in the morning. Which of the following is the primary responsibility of the nurse?

- A. taking the vital signs
- B. obtaining the permit
- C. explaining the procedure
- D. Checking the lab work - Answer-A. taking the vital signs

why?

the primary responsibility of the nurse is to take the vital signs before any surgery.

answers B,C and D are the responsibility of the doctor.

The nurse is working in the emergency room when a client arrives with severe burns of the left arm, hands, face, and neck. which action should receive priority?

One of the biggest highlights of the SAP Certified Associate - Configuring SAP Ariba Strategic Sourcing Suite prep torrent is the availability of three versions: PDF, app/online, and software/pc, each with its own advantages: The PDF version of C_ACDET_2506 Exam Torrent has a free demo available for download. You can print exam materials out and read it just like you read a paper. The online version of C_ACDET_2506 test guide is based on web browser usage design and can be used by any browser device. At the same time, the first time it is opened on the Internet, it can be used offline next time. You can practice anytime, anywhere. The SAP Certified Associate - Configuring SAP Ariba Strategic Sourcing Suite software supports the MS operating system and can simulate the real test environment. The contents of the three versions are the same. Each of them neither limits the number of devices used or the number of users at the same time. You can choose according to your needs.

People always feel fear of the unknown thing and cannot handle themselves with a sudden change. However, our C_ACDET_2506 exam questions can stand by your side. And we are determined to devote ourselves to serving you with the superior C_ACDET_2506 Study Materials in this career. Here are some features of our C_ACDET_2506 learning guide in our free demos which you can free download, you can understand in detail and make a choice.

Updated SAP Questions Ensure Thorough C_ACDET_2506 Exam Preparation

Generally speaking, you can achieve your basic goal within a week with our SAP Certified Associate - Configuring SAP Ariba Strategic Sourcing Suite C_ACDET_2506 study guide. Besides, for new updates happened in this line, our experts continuously

bring out new ideas in this SAP C_ACDET_2506 Exam for you. The new supplemental updates will be sent to your mailbox if there is and be free.

SAP C_ACDET_2506 Exam Syllabus Topics:

Topic	Details
Topic 1	• Deploy and Migration: This part of the exam assesses the expertise of an SAP Deployment Specialist and focuses on the final deployment of the configured solution and the data migration process. Candidates should demonstrate a solid grasp of how to move configurations from a testing environment into production while minimizing disruption. It also includes knowledge of tools and strategies used for data extraction.
Topic 2	• Project Overview, Roles and Responsibilities: This section of the exam measures the skills of an SAP Cloud Consultant and covers the fundamental understanding of SAP Activate methodology within the context of a cloud implementation project. Candidates are expected to be familiar with the project lifecycle, including phases such as Prepare, Explore, Realize, Deploy, and Run. This part also focuses on identifying key roles and responsibilities within a cloud project team, ensuring clarity in collaboration between consultants, clients, and SAP. It checks whether the consultant understands governance, stakeholder management, and the high-level structure of cloud deployment using SAP best practices.
Topic 3	• Field Configuration: This domain evaluates the knowledge of an SAP Deployment Specialist and focuses on customizing and configuring business fields in the SAP system according to client-specific needs. This includes adjusting system settings for master data, transaction data, and other essential field-level controls to support business processes effectively. The section tests the candidate's ability to use configuration tools, apply SAP standard templates, and ensure that the field configurations align with the desired operational workflows of the business. It also touches upon validation, testing, and documenting the configuration changes made during the implementation.

SAP Certified Associate - Configuring SAP Ariba Strategic Sourcing Suite Sample Questions (Q56-Q61):

NEW QUESTION # 56

You can choose multiple field configurations and migrate them to the production site by creating a package in your test site. Which of the following steps should be included? (Select 3 correct answers)

- A. Make sure you update the string resource files in the production site before migrating the corresponding configurations from test to production site.
- B. The Flex Master Data (FMD) templates must be defined and their data should be loaded in the production site before migrating FMD custom fields.
- C. Publish the form template within the test site in order to add the form fields in the package.
- D. If you are migrating fields that are associated with enumerations, you should load those enumerations in the production site before migrating the fields.
- E. Discard any other packages that appear in My Action Items.

Answer: A,B,D

Explanation:

When migrating field configurations in SAP Ariba, it's essential to prepare all dependent components to avoid migration errors.

* Enumerations (B): These must be imported into Production before migrating fields that reference them, since the fields depend on the enumerated values to validate configurations.

* String Resource Files (C): These contain translations and label customizations. They should be uploaded and updated in Production first to ensure that migrated fields have the proper localized text.

* Flex Master Data (E): Since fields referencing FMD templates rely on these data structures, the templates and their associated data must exist in Production before migrating the fields that depend on them. Discarding unrelated packages (A) or publishing form templates (D) is unrelated or unnecessary for field migration workflows; fields and forms are handled separately. SAP best practices emphasize preparing all referenced master data and resource files to ensure smooth and error-free field migration.

NEW QUESTION # 57

A French translation of a custom field label needs to be updated. Where do you update it?

- A. Customization Manager - Views
- B. Layout tab
- **C. AML & Translations Upload**
- D. Field Configuration + Label

Answer: C

Explanation:

SAP Ariba handles translations for custom field labels, help tips, and validation messages through the AML & Translations Upload mechanism. Administrators export the translation JSON or spreadsheet file, update the French (or other language) entries, and then re-import the updated file to apply translations.

Field Configuration + Label (C) sets the base language label but does not manage translations for other languages. The Customization Manager Views and Layout tabs are unrelated to translation management.

This method centralizes translation management and supports multiple languages consistently across the application.

NEW QUESTION # 58

A standard field is not available in reporting. A Greenfield customer needs to be able to report on the data captured in that standard field. How can this be achieved?

- A. All standard fields are reportable by default.
- **B. Create a custom field that can be marked reportable, default the custom field to the standard field value, publish, and then pull the field into reporting.**
- C. Under Field Configurations, search for the field in the appropriate class, mark the field reportable, save and publish.
- D. The system makes all fields reportable after a system refresh.

Answer: B

Explanation:

Some standard fields in SAP Ariba are not reportable by design and cannot be made reportable through configuration changes. The recommended workaround is to create a custom field that is marked as reportable, then set its default value to the standard field's value using an expression. Once published, this custom field can be included in reports, effectively surfacing the data previously inaccessible for reporting. System refreshes do not convert non-reportable standard fields to reportable. Marking the original standard field as reportable is not possible if the option is disabled by design.

NEW QUESTION # 59

You have defined a custom field to have a default value based on another field. You have verified that the defaulting happens correctly the first time. However, when the dependent field changes value, your custom field does not change. What scenarios could cause this? (Select 3 correct answers)

- **A. The parameter Application.Base.RecomputeValueOnFieldChange is not enabled**
- B. The defaulting Expression sets a value that violates the custom field Validity Condition
- **C. Your custom field has the property Respect User Value enabled, and the user has manually entered another value into the field**
- D. The custom field has the property Lock Initial value enabled, which prohibits a field to be changed once it's set
- **E. Your dependent field does not have the property Refresh screen on value change enabled**

Answer: A,C,E

Explanation:

* B: If the dependent field isn't configured to refresh the UI when its value changes (no "Refresh screen on value change" enabled), the defaulting logic won't retrigger.

* C: The global parameter Application.Base.RecomputeValueOnFieldChange must be enabled so that dependent default expressions recalculate on field changes; otherwise, they won't update automatically.

* E: The "Respect User Value" property, when enabled, means that if a user manually overrides the default, the system will not recalculate or overwrite the field even if dependencies change. Lock Initial Value (A) prevents edits after first default but doesn't affect recomputation, and violating validity (D) would trigger an error, not silently block updates.

Which Activate phase is tied to performing configurations in your SAP Ariba Strategic Sourcing suite solution?

- Answer: C**
