No other C_ACDET_2506 Study Materials or study dumps will bring you the knowledge and preparation that you will get from the C_ACDET_2506 study

materials available only from Pass4Test. Not only will you be able to pass any C_ACDET_2506 test, but will get a higher score, if you choose our C_ACDET_2506 study materials.

SAP Certified Associate - Configuring SAP Ariba Strategic Sourcing Suite Sample Questions (Q22-Q27):

NEW QUESTION # 22

What is the key role of the SAP Deployment Lead assigned to the project?

- A. To act as the liaison between the customer and SAP Support in resolving technical issues and manage customer escalations
- B. To perform configuration changes required to the SAP Ariba Strategic Sourcing suite solutions
- C. To advise the customer and partner in solution configurations
- D. To Test and Validate the solution prior to go-live

Answer: A

NEW QUESTION # 23

When you create a custom field, how do you define where the field is added?

- A. The field is added to a class, identified by the record ID
- B. The field is added to a class, identified by a class name
- C. Each field can be linked to multiple screens, identified via UI GroupClass ID
- D. The field is added to a project header, identified by the templateClass ID

Answer: B

Explanation:

In SAP Ariba, custom fields are associated with a specific class identified by its class name, such as ContractWorkspace or ProcureLineItem. This class-level association determines where the field is available within the application. When added to a parent class, the field inherits to all its subclasses, affecting all relevant data objects. The field is not linked via UI group IDs, project templates, or record IDs, which relate to different configuration aspects. This class-based design supports consistent data models and inheritance in SAP Ariba's architecture.

NEW QUESTION # 24

A Migration is performed for a Greenfield deployment to production, and the status of the Template configuration type indicates that it Failed. What actions do you take to make the failed template(s) available in production?

- A. The template must always be rebuilt in production
- B. Import the template in production
- C. Request SAP intervention
- D. Import the missing data in production and then import the template in production

Answer: D

NEW QUESTION # 25

Who leads Suite Integration activities?

- A. SAP Support
- B. Partner/Customer Functional Lead
- C. Customer Success Manager
- D. SAP Deployment Lead

Answer: D

Explanation:

The SAP Deployment Lead is responsible for leading Suite Integration activities across SAP Ariba solutions.

This role acts as the primary coordinator and facilitator for integration efforts, ensuring smooth data flow, process alignment, and technical synchronization between sourcing, procurement, contracts, and other modules in the Ariba suite. The Deployment Lead works closely with the customer's functional teams, partners, and technical specialists to manage integration scope, timelines, and troubleshooting.

SAP Support typically provides post-go-live assistance but does not lead integration planning. Functional leads focus on configuration and business processes but lack overarching integration responsibility. Customer Success Managers focus on adoption and satisfaction rather than technical integration.

Therefore, the Deployment Lead role is critical for coordinating complex multi-solution projects and ensuring a unified suite experience.

NEW QUESTION # 26

Which of the following considerations are important when creating custom fields? Note: There are 2 correct answers to this question.

- A. When a field has been created and published, that field type has been consumed from the number of available fields on the class
- B. There's a limit to the number of fields, by data type, that can be added to a class
- C. The data type of a field can be dynamically changed, depending on data type availability
- D. Published field changes can be reverted via Un-publish to free up memory

Answer: A,B

NEW QUESTION # 27

.....
