SAP Certified Associate - Positioning SAP Business AI Solutions as part of SAP Business Suite Sample Questions (Q25-Q30):

NEW QUESTION # 25
Drag and drop the elements at the bottom to the architecture layers of the SAP LeanIX meta model.

Answer:

Explanation:
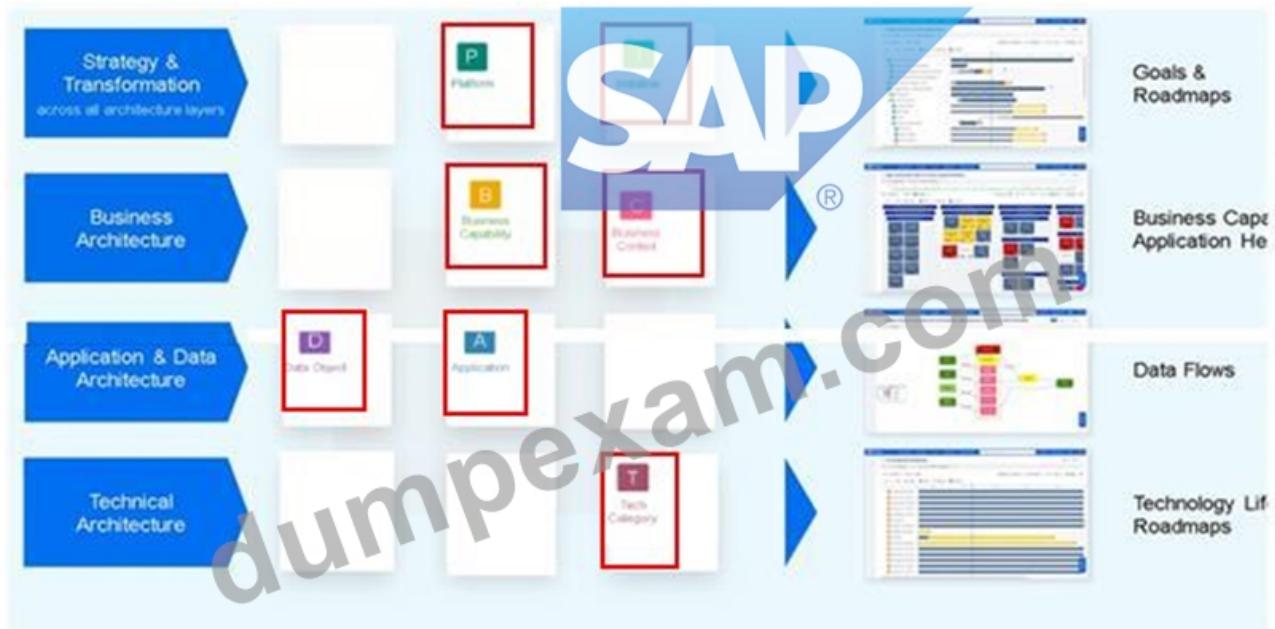

NEW QUESTION # 26
(What does business AI mean? Note: There are 3 correct answers to this question.)

- A. Agility
- B. Customer centricity
- C. Enterprise data
- D. Processes
- E. Technology foundation

Answer: C,D,E

Explanation:
Comprehensive and Detailed Explanation From Exact Extract: Business AI in SAP is defined as the combination of technology foundation (the underlying AI technology), enterprise data (the business data it leverages), and processes (the business processes it enhances and automates). This holistic approach ensures AI is embedded in business contexts for relevant, reliable, and responsible outcomes, with customer centricity and agility as resulting benefits rather than core components.
Exact extracts supporting this:
"What does SAP Business AI mean? Essentially three things: The technology it is based on. The enterprise data it is trained on. The processes it runs through."learning.sap.com Enterprise data: "Grounded in customers' business data."learning.sap.com Processes: "Embed AI features across all business processes, delivering immediate value to businesses."events.sap.com "Automating processes, and enabling predictive analytics."community.sap.com Technology foundation: "The technology it is based on."learning.sap.com "These AI functionalities are designed to help businesses automate processes, gain insights from data, improve decision-making."community.sap.com Other options are incorrect because:
Option B: Customer centricity is a benefit or principle in SAP solutions (e.g., in supply chain), but not a core definitional component of business AI.
Option D: Agility is an outcome enabled by business AI, such as increasing business agility, but not part of its fundamental definition.
Reference from Positioning SAP Business AI Solutions as part of SAP Business Suite documents or Study Guide: From the SAP Learning course "Discovering SAP Business AI," specifically the unit "Explaining the role of SAP Business AI," which defines business AI as the intersection of technology, data, and processes. Supported by SAP community blogs and product overviews, aligning with C_BCBAI_2502 certification for positioning AI in the SAP Business Suite.

NEW QUESTION # 27

Match the component on the left to the definition in the dropdown list.
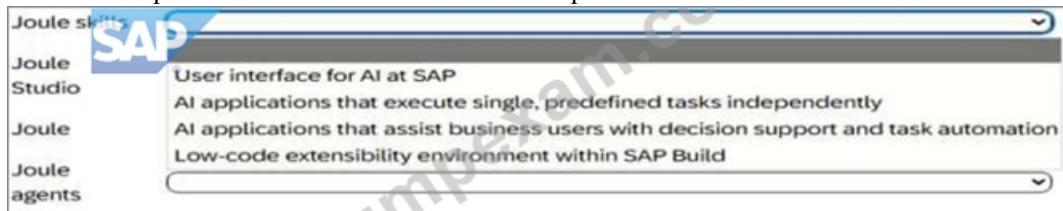

- A. Joule → User interface for AI at SAP
- B. Joule agents → AI applications that assist business users with decision support and task automation
- C. Joule skills → AI applications that execute single, predefined tasks independently
- D. Joule Studio → Low-code extensibility environment within SAP Build

Answer: A,B,C,D

NEW QUESTION # 28

Which tool in the Integrated Tolchhain is specifically intended to give organizations a consolidated view of their enterprise architecture and IT landscape?

- A. SAP LeanIX
- B. SAP Signavio
- C. SAP Cloud ALM
- D. SAP Joule for Developers

Answer: A

NEW QUESTION # 29

Your customer wants to deploy a generative AI model to summarize customer feedback across channels. Which AI Foundation component is best suited for this task?

- A. Joule Studio
- B. Generative AI hub
- C. SAP Document AI
- D. SAP Knowledge Graph

Answer: B

Explanation:
The Generative AI hub is the most suitable component within SAP's AI Foundation for summarizing customer feedback across channels. As per SAP Business AI documentation, the Generative AI hub provides enterprise-grade orchestration of generative AI models, enabling tasks such as text summarization, content generation, and natural language processing. This component is designed to handle large-scale, cross-channel data inputs, making it ideal for summarizing customer feedback. SAP Document AI focuses on extracting insights from structured documents, Joule Studio is a low-code environment for building AI applications, and SAP Knowledge Graph contextualizes data relationships but is not optimized for generative tasks. The Generative AI hub ensures secure, compliant, and scalable processing, delivering accurate summaries to support business decisions.
