## **Latest Released Exam C\_S4PM\_2504 Overviews - SAP SAP Certified Associate - Managing SAP S/4HANA Cloud Public Edition Projects Customizable Exam Mode**

Make yourself more valuable in today's competitive computer industry TestPassed's preparation material includes the most excellent

features, prepared by the same dedicated experts who have come together to offer an integrated solution. TestPassed's C\_S4PM\_2504 preparation material includes the most excellent features, prepared by the same dedicated experts who have come together to offer an integrated solution. C\_S4PM\_2504 Preparation material guarantee that you will get most excellent and simple method to pass your certification C\_S4PM\_2504 exams on the first attempt.

## **SAP Certified Associate - Managing SAP S/4HANA Cloud Public Edition Projects Sample Questions (Q33-Q38):**

### **NEW QUESTION # 33**

In SAP Cloud ALM, which attributes can be used to categorize features? Note: There are 3 correct answers to this question.

- A. Release
- B. Risk level
- C. Deliverable
- D. Workstream
- E. Tags

**Answer: A,D,E**

Explanation:

SAP Cloud ALM is the central tool for managing implementation projects for SAP S/4HANA Cloud Public Edition, including feature management. Features represent requirements or functionalities, and categorizing them with specific attributes enhances project organization and traceability.

\* Option A: Risk level Incorrect. While risk management is part of SAP Cloud ALM, risk level is not a standard attribute for categorizing features. The SAP Cloud ALM Documentation states, "Risks are managed separately in SAP Cloud ALM, but features are categorized using attributes like workstream, tags, and release, not risk level."

\* Option B: Workstream Correct. Workstreams, such as Project Management or Solution Adoption, are used to group features by functional area. The SAP Cloud ALM Implementation Guide explains,

"Features in SAP Cloud ALM can be categorized by workstream to align them with specific project areas, ensuring clarity in task allocation and progress tracking."

\* Option C: Tags Correct. Tags are flexible labels used to categorize features for custom grouping or filtering. The SAP Cloud ALM Documentation notes, "Tags are a versatile attribute in SAP Cloud ALM, allowing users to categorize features based on project-specific criteria, such as priority or process type."

\* Option D: Deliverable Incorrect. Deliverables are outcomes or artifacts in SAP Cloud ALM, but they are not used as attributes to categorize features. The SAP Cloud ALM Implementation Guide clarifies,

"Features are linked to deliverables but are not categorized by them; instead, attributes like workstream and tags are used."

\* Option E: Release Correct. Features are categorized by release to align them with deployment timelines. The SAP Cloud ALM Documentation confirms, "The release attribute in SAP Cloud ALM categorizes features according to the planned deployment cycle, ensuring alignment with project milestones." Extract from Official Documentation:

\* SAP Cloud ALM Implementation Guide (SAP Help Portal, <https://help.sap.com>): "Features in SAP Cloud ALM are categorized using attributes such as workstream, tags, and release to ensure effective organization and alignment with project objectives and deployment schedules."

\* SAP Cloud ALM Documentation (SAP Community, <https://community.sap.com>): "To manage features effectively, SAP Cloud ALM uses attributes like workstream for functional grouping, tags for flexible categorization, and release for deployment planning, enhancing project visibility and control." Additional Context:

Categorizing features in SAP Cloud ALM supports agile project management by enabling teams to filter, prioritize, and track requirements efficiently. Workstreams align features with project areas, tags provide custom flexibility, and releases ensure synchronization with deployment cycles, all critical for managing complex cloud implementations.

### **NEW QUESTION # 34**

What are the special characteristics of SAP's organizational change management framework? Note: There are 3 correct answers to this question.

- A. It is targeted at fostering fast and sustainable user adoption.

- B. It supports an agile way of working.
- C. It is only suitable for large-scale, complex cloud deployments.
- D. It is aligned with the SAP Activate implementation methodology.
- E. It contains activities that help to enhance system performance.

**Answer: A,B,D**

#### NEW QUESTION # 35

How does identity and access management work in SAP S/4HANA Cloud Public Edition?

- A. Through predefined business roles and catalogs assigned to users
- B. Through an AI-driven security model that adjust permissions dynamically by analyzing user behavior patterns
- C. Through departmental security tokens that are issued to organizational units rather than individual users
- D. Through a matrix-based permission system where each user is assigned to specific organizational levels and functional areas

**Answer: A**

#### NEW QUESTION # 36

What are some benefits for customers of using the SAP Activate methodology?

Note: There are 3 correct answers to this question.

- A. It contains time-phased instructions to help execute tasks throughout the implementation journey.
- B. It is designed to streamline the implementation process by reducing resource requirements from the customers and partners.
- C. It offers customers accelerators to help run their project as efficiently as possible.
- D. It relies on a traditional Waterfall approach for all project implementations, thus providing predictable outcomes.
- E. It guides customers through the entire SAP S/4HANA Cloud lifecycle and provides quick value realization.

**Answer: A,C,E**

#### NEW QUESTION # 37

In the SAP Activate prepare phase, the cloud project is set up and officially launched. Which change management activities are usually started in this phase? Note: There are 3 correct answers to this question.

- A. Develop and align the change network strategy
- B. Identify the key stakeholders and conduct a stakeholder analysis
- C. Conduct a detailed change impact analysis
- D. Facilitate the role mapping process
- E. Develop an initial change plan for the cloud project

**Answer: A,B,E**

Explanation:

The Prepare phase of the SAP Activate methodology is the initial stage of the SAP S/4HANA Cloud Public Edition implementation, where the project is set up, and foundational change management activities are initiated to ensure a smooth transition.

\* Option A: Identify the key stakeholders and conduct a stakeholder analysisCorrect. Stakeholder identification and analysis are critical early activities to understand who will be impacted and their roles in the project. The SAP Activate Methodology Guide states, "In the Prepare phase, change management begins with identifying key stakeholders and conducting a stakeholder analysis to assess their influence and needs."

\* Option B: Conduct a detailed change impact analysisIncorrect. A detailed change impact analysis typically occurs in the Explore phase, once requirements and gaps are identified during Fit-to-Standard workshops. The SAP OCM Guide notes, "Change impact analysis is performed in the Explore phase to evaluate the specific impacts of the solution on business processes and users."

\* Option C: Develop an initial change plan for the cloud projectCorrect. An initial change plan is created in the Prepare phase to outline the change management approach and activities. The SAP S

4HANA Cloud OCM Guide explains, "The Prepare phase includes developing an initial change plan to define the scope, objectives, and activities for organizational change management."

\* Option D: Develop and align the change network strategyCorrect. The change network strategy establishes a network of change

agents to support adoption. The SAP Activate Methodology Guide confirms, "In the Prepare phase, the change network strategy is developed to align change agents and champions who will drive the project's success."

\* Option E: Facilitate the role mapping process Incorrect. Role mapping, which aligns SAP business roles to employees, typically occurs in the Explore or Realize phases when business processes are validated. The SAP S/4HANA Cloud Study Guide declares, "Role mapping is conducted post-Prepare phase, once process requirements are clear." Extract from Official Documentation:

\* SAP Activate Methodology Guide (SAP Community, <https://community.sap.com>): "The Prepare phase initiates change management by identifying stakeholders, conducting stakeholder analysis, developing an initial change plan, and aligning the change network strategy to support the project."

\* SAP S/4HANA Cloud OCM Guide (SAP Help Portal, <https://help.sap.com>): "Key change management activities in the Prepare phase include stakeholder analysis, initial change plan development, and change network strategy alignment to ensure a strong foundation for adoption." Additional Context:

The Prepare phase sets the tone for change management by establishing governance and engaging stakeholders early, ensuring alignment with the project's goals. These activities are foundational to mitigating resistance and fostering adoption in later phases.
