

Exam CAS-005 Reference & CAS-005 Sample Questions Answers

What's more, part of that PrepAwayExam CAS-005 dumps now are free: https://drive.google.com/open?id=1Mnwjkd2YDGNwa-geqV_vXSCmKRaHBNjl

It is acknowledged that there are numerous CAS-005 learning questions for candidates for the exam, however, it is impossible for you to summarize all of the key points in so many materials by yourself. But since you have clicked into this website for CAS-005 practice materials you need not to worry about that at all because our company is especially here for you to solve this problem. With our CAS-005 Exam Questions, you will pass your exam just in one go for we are the most professional team in this career for over ten years.

CompTIA CAS-005 Exam is very popular in IT field. Having CAS-005 certificate is the best for those people who want to be promoted and is also a valid selection. And with the aid of CAS-005 certification test, you can improve your skills and master some useful techniques in your job so that you can finish your work better and demonstrate your great ability before other people. Only in this way can you get more development opportunities.

CompTIA CAS-005 Sample Questions Answers | New CAS-005 Dumps Ppt

If you failed to do so then the customer gets a full refund from PrepAwayExam according to the terms and conditions. Users can start using CompTIA CAS-005 instantly after purchasing it. Three CAS-005 Exam Questions format is provided to customers so that they can access the CompTIA SecurityX Certification Exam (CAS-005) prep material in every possible way according to their needs.

CompTIA SecurityX Certification Exam Sample Questions (Q79-Q84):

NEW QUESTION # 79

Embedded malware has been discovered in a popular PDF reader application and is currently being exploited in the wild. Because the supply chain was compromised, this malware is present in versions 10.0 through 10.3 of the software's official versions. The malware is not present in version 10.4.

Since the details around this malware are still emerging, the Chief Information Security Officer has asked the senior security analyst to collaborate with the IT asset inventory manager to find instances of the installed software in order to begin response activities. The asset inventory manager has asked an analyst to provide a regular expression that will identify the affected versions. The software installation entries are formatted as follows:

Reader 10.0
Reader 10.1
Reader 10.2
Reader 10.3
Reader 10.4

Which of the following regular expression entries will accurately identify all the affected versions?

- A. Reader(*)[1][0].[0-4:
- B. Reader() [1][0] X.[1-3:
- C. Reader() [1][0].[0-3:
- D. Reader[11[01X.f0-3'

Answer: C

Explanation:

Comprehensive and Detailed Step-by-Step

Understand the Question Requirements:

The goal is to use a regular expression (regex) to match software versions 10.0 through 10.3, but exclude version 10.4.

Review Regex Syntax:

[] indicates a character set (matches any one character in the set).

[0-3] matches any digit between 0 and 3.

\. escapes the period (.) so it matches a literal period instead of acting as a wildcard.

() groups parts of the regex together.

Analyze Each Option:

Option A: Reader(*)[1][0].[0-4:

Incorrect. The use of (*) is not valid syntax in this context and [0-4 is incomplete or misformatted.

Option B: Reader[11[01X.f0-3'

Incorrect. This is an invalid regex syntax, mixing character sets and mismatched brackets.

Option C: Reader() [1][0].[0-3:

Correct. This regex is valid and matches "Reader 10.0", "Reader 10.1", "Reader 10.2", and "Reader 10.3" while excluding "Reader 10.4".

Breakdown:

Reader: Matches the text "Reader".

[1][0]: Matches "10" as a combination of two characters.

\.: Matches the literal period.

[0-3]: Matches any single digit between 0 and 3.

Option D: Reader() [1][0] X.[1-3:

Incorrect. The syntax X.[1-3 is invalid, and this does not match the required versions.

Conclusion:

The regex in Option C correctly identifies all affected versions (10.0, 10.1, 10.2, 10.3) while excluding the unaffected version (10.4).

Okay, I'm ready to answer your CompTIA CASP+ question using my training data. Here's the question and answer in the requested format:

NEW QUESTION # 80

In order to follow new regulations, the Chief Information Security Officer plans to use a defense-in-depth approach for a perimeter network. Which of the following protections would best achieve this goal?

- A. NGFW, IPS, EDR
- B. CASB, DLP, EDR
- C. SASE, IDS, SAST
- D. SAST, DAST, IAST

Answer: A

NEW QUESTION # 81

A company wants to install a three-tier approach to separate the web, database, and application servers. A security administrator must harden the environment which of the following is the best solution?

- A. Configuring a SASb solution to restrict users to server communication
- B. Implementing microsegmentation on the server VLANs
- C. Deploying a VPN to prevent remote locations from accessing server VLANs

- D. installing a firewall and making it the network core

Answer: B

Explanation:

The best solution to harden a three-tier environment (web, database, and application servers) is to implement microsegmentation on the server VLANs.

Enhanced Security: Microsegmentation creates granular security zones within the data center, allowing for more precise control over east-west traffic between servers. This helps prevent lateral movement by attackers who may gain access to one part of the network.

Isolation of Tiers: By segmenting the web, database, and application servers, the organization can apply specific security policies and controls to each segment, reducing the risk of cross-tier attacks.

Compliance and Best Practices: Microsegmentation aligns with best practices for network security and helps meet compliance requirements by ensuring that sensitive data and systems are properly isolated and protected.

NEW QUESTION # 82

A security engineer wants to reduce the attack surface of a public-facing containerized application. Which of the following will best reduce the application's privilege escalation attack surface?

- A. Running the container in an isolated network and placing a load balancer in a public-facing network. Adding the following ACL to the load balancer: PZRKZI HTTES from 0-0.0.0.0/0 port 443
- **B. Implementing the following commands in the Dockerfile: RUN echo user:x:1000:1000:home/user:/dew/null > /etc/passwd**
- C. Designing a multicontainer solution, with one set of containers that runs the main application, and another set of containers that perform automatic remediation by replacing compromised containers or disabling compromised accounts
- D. Installing an EDR on the container's host with reporting configured to log to a centralized SIEM and implementing the following alerting rules: TF PBOCESS_USEB=rooC ALERT_TYPE=critical

Answer: B

Explanation:

Implementing the given commands in the Dockerfile ensures that the container runs with non-root user privileges. Running applications as a non-root user reduces the risk of privilege escalation attacks because even if an attacker compromises the application, they would have limited privileges and would not be able to perform actions that require root access.

A. Implementing the following commands in the Dockerfile: This directly addresses the privilege escalation attack surface by ensuring the application does not run with elevated privileges.

B. Installing an EDR on the container's host: While useful for detecting threats, this does not reduce the privilege escalation attack surface within the containerized application.

C. Designing a multi-container solution: While beneficial for modularity and remediation, it does not specifically address privilege escalation.

D. Running the container in an isolated network: This improves network security but does not directly reduce the privilege escalation attack surface.

NEW QUESTION # 83

A security officer performs due diligence activities before implementing a third-party solution into the enterprise environment. The security officer needs evidence from the third party that a data subject access request handling process is in place. Which of the following is the security officer most likely seeking to maintain compliance?

- A. Certification requirements
- B. Information security standards
- C. E-discovery requirements
- D. Reporting frameworks
- **E. Privacy regulations**

Answer: E

Explanation:

Comprehensive and Detailed Step-by-Step

Privacy regulations (C), such as GDPR (General Data Protection Regulation) and CCPA (California Consumer Privacy Act), require companies to provide data subject access request (DSAR) handling processes. A DSAR allows individuals to request details about their personal data stored by a company and request modifications or deletions.

NEW QUESTION # 84

.....

CAS-005 guide torrent is authoritative. Over the years, our study materials have helped tens of thousands of candidates successfully pass the exam. CAS-005 certification training is prepared by industry experts based on years of research on the syllabus. These experts are certificate holders who have already passed the certification. They have a keen sense of smell for the test. Therefore, CAS-005 certification training is the closest material to the real exam questions. With our study materials, you don't have to worry about learning materials that don't match the exam content. With CAS-005 Study Guide, you only need to spend 20 to 30 hours practicing to take the exam. In addition, CAS-005 certification training has a dedicated expert who updates all data content on a daily basis and sends the updated content to the customer at the first time. Therefore, using CAS-005 guide torrent, you don't need to worry about missing any exam focus.
