## Valid Google Chrome-Enterprise-Administrator Test Questions | Chrome-Enterprise-Administrator Reliable Test Simulator

The high quality of our Chrome-Enterprise-Administrator preparation materials is mainly reflected in the high pass rate, because we deeply know that the pass rate is the most important. As is well known to us, our passing rate has been high; 99% of people who used our Chrome-Enterprise-Administrator real test has passed their tests and get the certificates. I dare to make a bet that you will not be exceptional. Your test pass rate is going to reach more than 99% if you are willing to use our Chrome-Enterprise-Administrator Study Materials with a high quality. So it is necessary for you to know well about our Chrome-Enterprise-Administrator test prep.

### Google Chrome-Enterprise-Administrator Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>• <b>Manage Chrome Enterprise in the Cloud:</b> This section of the exam measures skills of a Cloud Systems Administrator and focuses on preparing and configuring environments for Chrome cloud management. Candidates must demonstrate how to verify domains, use admin roles, configure organizational structures, deploy enrollment tokens, enable reporting, and maintain Chrome using the Google Admin console.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>• <b>Analyze Chrome Data:</b> This section of the exam measures skills of a Chrome Data Analyst and focuses on using the Google Admin console to view, analyze, and troubleshoot browser data. It includes reviewing reports, diagnosing browser or update issues, investigating performance problems, and identifying security risks based on log events and Chrome activity.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>• <b>Chrome Extensions:</b> This section of the exam measures skills of an Endpoint Security Manager and involves managing Chrome extension policies. It includes designing extension management strategies, handling extension exemptions, creating approval workflows, and assessing extensions for their risk and compliance with business continuity requirements.</li></ul>
Topic 4	<ul style="list-style-type: none"><li>• <b>Chrome Updates:</b> This section of the exam measures skills of a Chrome IT Policy Analyst and addresses the various update methods available for Chrome. It includes selecting the right update strategy for different business and security needs, managing compliance across platforms, and adapting update methods based on environmental changes or risks.</li></ul>
Topic 5	<ul style="list-style-type: none"><li>• <b>Chrome Enterprise Management Fundamentals:</b> This section of the exam measures skills of a Chrome Device Administrator and covers the foundational elements of managing Chrome in an enterprise. It includes understanding how policies are applied and resolved, differentiating managed browsers from profiles, and describing how policies work. It also covers Chrome's built-in security features, how extensions are used and deployed, and how the release cycle and channels are managed.</li></ul>

### Google Professional Chrome Enterprise Administrator Certification Exam Sample Questions (Q18-Q23):

#### NEW QUESTION # 18

An administrator decides to shorten the default time that a browser may be inactive before automatic deletion from the Google Admin console. What policy must be selected for the Device Token Management policy to allow devices to re-enroll in the Google Admin console?

- A. Delete Token
- B. Revoke Token
- **C. Renew Token**
- D. Invalidate Token

**Answer: C**

Explanation:

When managing inactive device tokens, the "Renew Token" option is crucial for allowing devices to re-enroll after a period of

inactivity. If the token is revoked, invalidated, or deleted, the device will likely require a manual re-enrollment process. Renewing the token provides a mechanism for the device to check back in and remain managed.

#### NEW QUESTION # 19

An administrator is modifying a policy at the top-level organizational unit (OU), and there is an OU below that should not accept this modification. What can the administrator do to be certain of this\*?

- A. Turn off inheritance for all policies
- **B. Set the policy to locally applied at the child OU**
- C. Set the policy to locally applied at the parent OU
- D. Set policy precedence to Child > Parent

**Answer: B**

Explanation:

To prevent a child OU from inheriting a policy set at a parent OU, the administrator needs to configure the policy within the child OU itself and set its inheritance status to "Locally applied." This explicitly overrides the inherited policy from the parent with a specific setting for the child OU. Setting it to locally applied at the parent would not prevent inheritance. Turning off inheritance entirely might not be desired for other policies, and "Child > Parent" is the default precedence when inheritance is enabled.

#### NEW QUESTION # 20

What report types are available in Google Chrome Enterprise Core on the Chrome Insights Report page'?

- A. Device Fleet Hardware report, Browsers that need attention, Chromium browsers
- **B. Browsers pending updates, Browsers without activity in the past 28 days, Browsers that have been recently enrolled**
- C. Chromium browsers, Devices that need to be purchased, Devices that have been used by family members
- D. Devices that need attention, Devices that need to be purchased, Devices that have been used by family members

**Answer: B**

Explanation:

The Chrome Insights Report in the Google Admin console provides visibility into the managed Chrome browser environment. Key report types available here include "Browsers pending updates" to identify devices needing patching, "Browsers without activity in the past 28 days" to understand browser usage, and "Browsers that have been recently enrolled" for monitoring onboarding. The other options list reports that are either not specific to Chrome Insights or related to device hardware rather than browser status.

#### NEW QUESTION # 21

A company uses Chrome Enterprise Core to manage Chrome browsers for its employees and contractors who share devices. They need a way to ensure the following:

- \* Full-Time Employees (FTEs) can only see and use extensions assigned to them
- \* Contractors can only see and use extensions assigned to them
- \* Both FTEs and contractors have access to a set of shared extensions

How can the Chrome administrator configure Chrome Enterprise Core to achieve this'?

- A. Ask users to install all the extensions they need on the shared device
- **B. Create Organizational Units (OUs) for Shared devices, assign shared extensions to the OU. Create a separate group in the Google Admin Console for FTEs. Assign extensions to the group based on their needs**
- C. Create Organizational Units (OUs) for Shared devices, assign shared extensions to the OU. Use Group Policy Objects to assign specific extensions by user group
- D. Create separate groups in the Google Admin Console for FTEs and Contractors. Assign extensions to respective groups based on their needs

**Answer: B**

Explanation:

The most effective way to manage extensions in this scenario is to use a combination of OUs and groups.

Create an OU for the shared devices and force-install the shared extensions at this OU level. Then, create separate user groups for

FTEs and Contractors in the Google Admin console and force-install their specific extensions to these groups. User group policies have a higher precedence than OU policies, ensuring the correct extensions are available to each user type when they sign in to the shared devices. Option A mentions Group Policy Objects, which are for Windows environments and less relevant in a cloud-managed scenario across potentially different OSes. Option B doesn't address the shared device aspect effectively. Option C is not a managed approach.

#### NEW QUESTION # 22

A Chrome administrator is trying to apply a new policy to the Finance organizational unit (OU) in the Google Admin console, but some managed browsers in the Finance OU display an unexpected policy value. What could be causing the discrepancy in policy value for the affected managed browsers'?

- A. A user group has the same policy configured with a different value
- B. The Finance OU has Inheritance for the policy set to 'Locally applied'
- C. Another OU at the same hierarchical level as the Finance OU has the same policy configured with a different value
- D. A sub-OU under the Finance OU has Inheritance for the same policy set to 'Finance'

**Answer: A**

Explanation:

Policy conflicts can arise if the same policy is configured at multiple levels with different values. User group policies have a higher precedence than OU policies. Therefore, if a user within the Finance OU is also a member of a group with a conflicting policy setting, the group policy will override the OU policy. Policies at the same hierarchical level do not typically conflict in this way. If the Finance OU has "Locally applied," it would mean it's not inheriting, but it wouldn't explain a \*discrepancy\* within the OU itself unless multiple local settings were applied. A sub-OU inheriting from Finance wouldn't cause a discrepancy at the Finance OU level.

#### NEW QUESTION # 23

.....

Before you choose to end your practices of the Chrome-Enterprise-Administrator study materials, the screen will display the questions you have done, which help you check again to ensure all questions of Chrome-Enterprise-Administrator practice prep are well finished. The report includes your scores of the Chrome-Enterprise-Administrator learning guide. Also, it will display how many questions of the Chrome-Enterprise-Administrator exam questions you do correctly and mistakenly. In a word, you can compensate for your weakness and change a correct review plan of the study materials.
