

Exam CT-UT Review & Training CT-UT Online

2025 Latest Itbraindumps CT-UT PDF Dumps and CT-UT Exam Engine Free Share: https://drive.google.com/open?id=1uz_flajYfpTRniXL_5bQBHhbqUJRLU7

Have you been many years at your position but haven't got a promotion? Or are you a new comer in your company and eager to make yourself outstanding? Our CT-UT exam materials can help you. With our CT-UT exam questions, you can study the most latest and specialized knowledge to deal with the problems in you daily job as well as get the desired CT-UT Certification. You can lead a totally different and more successfully life latter on.

Our products boost 3 versions and varied functions. The 3 versions include the PDF version, PC version, APP online version. You can use the version you like and which suits you most to learn our CT-UT study materials. The 3 versions support different equipment and using method and boost their own merits and functions. For example, the PC version supports the computers with Window system and can stimulate the real exam. Our products also boost multiple functions which including the self-learning, self-evaluation, statistics report, timing and stimulation functions. Each function provides their own benefits to help the clients learn the CT-UT Study Materials efficiently. For instance, the self-learning and self-evaluation functions can help the clients check their results of learning the CT-UT study materials.

Training CT-UT Online - Instant CT-UT Download

Boring learning is out of style. Our CT-UT study materials will stimulate your learning interests. Then you will concentrate on learning our CT-UT practice guide for we have professional experts who have been in this career for over ten year apply the newest technologies to develop not only the content but also the displays. Nothing can divert your attention. If you are ready to change yourself, come to purchase our CT-UT Exam Materials. Never give up your dreams.

ISTQB CT-UT Exam Syllabus Topics:

Topic	Details
Topic 1	• Risks in Usability, User Experience and Accessibility: This domain assesses the ability of Risk Analysts to identify and analyze common risks that can affect usability, user experience, and accessibility. It differentiates between product risks—such as users being unable to use a product effectively—and project risks, including lack of expertise or insufficient usability evaluation processes. Understanding these risks helps in planning effective usability testing and evaluation.
Topic 2	• Usability and Accessibility Standards: This part addresses the knowledge required by Compliance Officers regarding standards and guidelines that govern usability and accessibility. It introduces ISO standards like ISO 9241-110 and ISO 9241-171, manufacturer guidelines from major platforms, and web accessibility guidelines such as WCAG. It also touches on legislation relevant to accessibility requirements, such as the UK Equality Act and the Americans with Disabilities Act.

Topic 3	Usability Reviews: This domain evaluates the skills of Usability Testers in conducting reviews of software interfaces without user involvement. It differentiates informal reviews from expert reviews and introduces heuristic evaluation as a structured method. The section describes step-by-step approaches to preparing for and conducting reviews, emphasizing the importance of consensus and clear communication of findings.
Topic 4	Basic Concepts: This section measures the skills of Usability Analysts and covers fundamental definitions and ideas related to usability, user experience, and accessibility. It explains what usability means in terms of effectiveness, efficiency, and satisfaction within software products. User experience concepts related to emotions, perceptions, and responses before, during, and after use are included. It also addresses accessibility, focusing on usage by people with diverse abilities.
Topic 5	User Surveys: This part assesses the ability of Usability Test Analysts to design and use surveys to gather user feedback on software usability. It describes how to prepare user surveys, select appropriate questionnaires, and analyze survey responses to measure user satisfaction and other quality attributes from the user's perspective.

ISTQB Certified Tester Usability Tester Sample Questions (Q10-Q15):

NEW QUESTION # 10

As an expert for usability, you're in charge of the usability part of the development of a business application for a large customer. You have worked as a usability expert with the development team for two years and are operating well together; the developers value your feedback and give their bests implementing your suggestions. The product is in an early stage, so there's only a rudimentary prototype available.

Given this information, what is the best approach to verify the usability at the current stage?

- A. Unmoderated usability test
- B. Usability maturity assessment
- C. Usability review
- D. Usability test in the lab

Answer: C

Explanation:

At an early development stage where only a rudimentary prototype exists, a usability review (e.g., expert or heuristic review) is the most effective method. It allows usability specialists to identify potential usability issues without the need for a fully functioning product. Reviews can provide immediate, actionable feedback to guide design improvements before moving into more resource-intensive usability testing. An unmoderated usability test (B) or lab test (D) may be impractical at this stage due to limited interactivity. A usability maturity assessment (C) evaluates organizational processes and is not applicable to evaluating a specific prototype.

Nielsen Norman Group: When to Use Heuristic Evaluation

ISO 9241-210:2019 - Human-Centered Design Processes

Usability.gov: Usability Evaluation Types

NEW QUESTION # 11

What is the System Usability Scale (SUS)?

- A. A simple, ten-item attitude scale giving a global view of subjective assessments of usability.
- B. Testing to evaluate the degree to which the system can be used by specified users with effectiveness, efficiency and satisfaction in a specified context of use.
- C. A usability test execution activity specified by the moderator that needs to be accomplished by a usability test participant within a given period of time.
- D. A requirement on the usability of a component of system

Answer: A

Explanation:

The System Usability Scale (SUS) is a standardized, reliable tool used to measure perceived usability. It consists of 10 items with

five response options (from strongly agree to strongly disagree). It is widely used due to its simplicity and effectiveness in providing a single score to reflect a user's overall satisfaction with a system. Option A refers to ISO's definition of usability testing, B describes a task in usability testing, and D refers to a usability requirement, not SUS. Therefore, the correct description of SUS is option C.

References:

Brooke, J. (1996). SUS: A Quick and Dirty Usability Scale.

Usability.gov: System Usability Scale (SUS)

ISO/IEC 25062 - Common Industry Format for Usability Test Reports

#####

NEW QUESTION # 12

You're conducting a user survey and you have reached the third stage, selecting an appropriate questionnaire.

You have decided to use a standardized questionnaire as you want to benchmark against previous usability measurements.

Which of the following user questionnaires allow benchmarking against previous usability measurements?

i. SUS

ii. SUMI

iii. WAMMI

- A. ii & iii are true, i is false
- B. i is true, ii & iii are false
- **C. i, ii and iii are true**
- D. i & ii are true, iii is false

Answer: C

Explanation:

SUS (System Usability Scale), SUMI (Software Usability Measurement Inventory), and WAMMI (Website Analysis and Measurement Inventory) are all validated, standardized usability questionnaires that support benchmarking. They allow comparison against known usability scores from a wide variety of systems. These instruments provide numeric scores that can be interpreted using benchmark datasets or industry standards.

Therefore, all three-i, ii, and iii-are true, making D the correct answer.

Brooke, J. (1996). SUS - A Quick and Dirty Usability Scale

Kirakowski, J. (1994). SUMI Development

Here are the verified answers and detailed explanations for Questions 22 through 25, formatted in your specified structure:

#####

NEW QUESTION # 13

Your last 20-pages usability test report wasn't received well by the developers; only two of the 25 usability problems have been fixed. This time, you want to stick to the best practices in order to obtain better acceptance by the development team.

What are you going to do differently this time?

- **A. Include positive findings in the report, not only usability problems**
- B. Add the low-priority findings you didn't include in the first report
- C. Make the report more detailed and longer
- D. Include contact details of the test participants so that the development team can contact them in case they have questions

Answer: A

Explanation:

Usability test reports are more effective when they are balanced and include not only problems but also what worked well. Including positive findings increases credibility, encourages the development team, and helps them understand what should remain unchanged. Option B violates privacy and ethical standards. Option C may dilute focus, and D could worsen the problem by making the report less accessible. Thus, the best practice supported by usability.gov and Nielsen Norman Group is to include both positive and negative findings.

References:

Usability.gov: Reporting Usability Findings

Nielsen Norman Group: Writing Usability Reports that Developers Will Read ISO 25062 - Usability Test Report Format

#####

A web shop owner used Google Analytics to gather information about her users. She found out that most users take about five minutes to place an order. Is the usability of the website good or bad?

- Answer: B**

Usability is defined in ISO 9241-11 as the extent to which a system can be used by specified users to achieve specified goals with effectiveness, efficiency, and satisfaction in a specified context of use. Without knowing the context—such as product complexity, user familiarity, device type, or purchasing habits—it is impossible to judge whether five minutes is good or bad. For complex items, five minutes may be reasonable, while for one-click purchases, it may be excessive. Thus, usability cannot be assessed solely based on one metric like time—it must be evaluated within its full usage context.
