## EMC Dell Information Storage and Management Foundations v2 Exam Sample Questions (Q47-Q52):

### NEW QUESTION # 47

Question:

How does Storage Class Memory (SCM) compare to DRAM and flash memory in terms of speed?

- A. SCM is as fast as DRAM
- B. SCM is faster than both DRAM and flash
- C. SCM is slower than flash but faster than HDDs
- D. SCM is slower than DRAM but faster than flash

Answer: D

Explanation:

Storage Class Memory (SCM) bridges the gap between DRAM and NAND flash memory. It offers faster access times than flash memory but is still slower than DRAM. SCM provides non-volatile storage with performance characteristics closer to DRAM, making it suitable for applications requiring high-speed data access.

### NEW QUESTION # 48

Match each OSD (Object Storage Device) feature with its description:

OSD Features	Description	
Flexible data access method	Drives data placement and protection based on the service requirements	
Metadata-driven policy	Abstracts storage from the application and provides a common view independent of location	
Data protection	Supports REST/SOAP APIs and the file sharing protocols, CIFS and NFS, for file services	
Global namespace	Global distribution of objects using either replication or erasure coding	

Answer:

Explanation:

OSD Features	Description	
Flexible data access method	Drives data placement and protection based on the service requirements	Metadata-driven policy
Metadata-driven policy	Abstracts storage from the application and provides a common view independent of location	Global namespace
Data protection	Supports REST/SOAP APIs and the file sharing protocols, CIFS and NFS, for file services	Flexible data access method
Global namespace	Global distribution of objects using either replication or erasure coding	Data protection

Metadata-driven policy	Drives data placement and protection based on the service requirements
Data protection	Global distribution of objects using either replication or erasure coding
Global namespace	Abstracts storage from the application and provides a common view independent of location

#Flexible data access method:Object storage can offer multiple ways to access and interact with stored data, such as REST/SOAP APIs (for object-based access) and file-sharing protocols (CIFS, NFS) for file-level access.

#Metadata-driven policy:Object storage uses rich metadata to define how objects are placed, protected, and managed, driven by policies that respond to service-level requirements.

#Data protection:Object storage systems implement data protection at a global scale through replication or erasure coding to ensure data durability and availability.

#Global namespace:Object storage abstracts physical locations, providing a single namespace (a unified view) so that applications can seamlessly access data regardless of where it physically resides.

### NEW QUESTION # 49

Question:

Which activity is performed in the fifth stage of penetration testing?

- A. Checking the compromised system or network
- B. Collecting the evidence of the exploited vulnerabilities
- C. Determining if persistence access can be maintained
- D. Determining the risk levels by exploited vulnerabilities

**Answer: A**

Explanation:

The fifth stage of penetration testing is known as post-exploitation or analysis of the compromised environment. It involves:

- \* Checking the compromised system/network to determine the scope of access.
- \* Identifying potential for further exploitation.
- \* Gathering information about the environment.
- \* Option A relates to the risk assessment phase.
- \* Option B is typically done in post-exploitation but isn't the main step.
- \* Option D (collecting evidence) is more related to reporting/documentation at the end.

## NEW QUESTION # 50

Question:

What information is available in a capacity planning report for storage infrastructure?

- A. Current and historical information about the utilization of storage, file systems, and ports
- B. Number of units of storage available, used, and the cost
- C. Current and historical performance information about IT components and operations
- D. Equipment purchase dates, licenses, lease status, and maintenance records

**Answer: A**

Explanation:

Capacity planning reports in storage environments focus on:

- \* Utilization trends of storage systems (e.g., used vs. available space)
- \* File system usage (volumes, file systems)
- \* Ports (SAN/NAS connections)

This enables proactive capacity management and ensures enough resources are available to meet future demands.

## NEW QUESTION # 51

Question:

What describes an incident in a storage infrastructure?

- A. Any action that may impact the functionality of the system
- B. Support request to help access an IT resource
- C. Unknown root cause of one or more disruptions to service
- D. Any event that prevents corrections of known errors

**Answer: C**

Explanation:

An incident is an unplanned disruption of a service or a reduction in its quality, often with an unknown root cause.

Incidents require immediate action to restore service.

Example: SAN switch port down, unexpected storage latency.

- \* Support requests are typically service requests, not incidents.
- \* Impact actions are more about changes, not incidents.
- \* Events preventing corrections might be problems, not incidents.
