# Exam D-PVM-OE-01 Quiz, D-PVM-OE-01 High Passing Score

2025 Latest TestKingIT D-PVM-OE-01 PDF Dumps and D-PVM-OE-01 Exam Engine Free Share: https://drive.google.com/open?id=1J7xE9X0alXRBuAEOWC_uVatf6DF2CqpL

With the D-PVM-OE-01 exam, you will harvest many points of theories that others ignore and can offer strong prove for managers. So the D-PVM-OE-01 exam is a great beginning. However, since there was lots of competition in this industry, the smartest way to win the battle is improving the quality of our D-PVM-OE-01 Learning Materials, which we did a great job. With passing rate up to 98 to 100 percent, you will get through the D-PVM-OE-01 exam with ease.

The software keeps track of the previous Dell Technologies PowerMax Operate (D-PVM-OE-01) practice exam attempts and shows the changes of each attempt. You don't need to wait days or weeks to get your performance report. The software displays the result of the EMC D-PVM-OE-01 Practice Test immediately, which is an excellent way to understand which area needs more attention.

Actual D-PVM-OE-01 Dell Technologies PowerMax Operate Exam Questions with accurate answers

Do you want to pass the D-PVM-OE-01 exam and get the certificate? If you want to pass the exam easily, come to learn our D-PVM-OE-01 study materials. Our D-PVM-OE-01 learning guide is very excellent, which are compiled by professional experts who have been devoting themself to doing research in this career for over ten years. I can say that no one can know more than them. So they know evey detail of the D-PVM-OE-01 Exam Questions, and they will adopt the advices of our loyal customers to make better.

## EMC Dell Technologies PowerMax Operate Sample Questions (Q28-Q33):

NEW QUESTION # 28
Place the steps in the correct order for performing a Non-Disruptive Migration

Steps

Steps	Correct Order
Initiate data synchronization from the source to the target and cutover to make source array paths inactive so target array services all host I/O.	
Remove the configured array-to-array connectivity for the data migration pathway on both storage arrays.	
Set up the migration environment to migrate applications from the source array to the target array.	
Examine the specific storage for the applications on the source array and automatically provision equivalent storage on the target array.	
Commit the necessary changes after the source to target data synchronization is complete and all application data has been migrated to the target.	

Answer:

Explanation:

Steps

Steps	Correct Order
Initiate data synchronization from the source to the target and cutover to make source array paths inactive so target array services all host I/O.	Set up the migration environment to migrate applications from the source array to the target array.
Remove the configured array-to-array connectivity for the data migration pathway on both storage arrays.	Examine the specific storage for the applications on the source array and automatically provision equivalent storage on the target array.
Set up the migration environment to migrate applications from the source array to the target array.	Initiate data synchronization from the source to the target and cutover to make source array paths inactive so target array services all host I/O.
Examine the specific storage for the applications on the source array and automatically provision equivalent storage on the target array.	Commit the necessary changes after the source to target data synchronization is complete and all application data has been migrated to the target.
Commit the necessary changes after the source to target data synchronization is complete and all application data has been migrated to the target.	Remove the configured array-to-array connectivity for the data migration pathway on both storage arrays.

Explanation:
* Set up the migration environment to migrate applications from the source array to the target array.
* Examine the specific storage for the applications on the source array and automatically provision equivalent storage on the target array.
* Initiate data synchronization from the source to the target and cutover to make source array paths inactive so target array services all host I/O.
* Commit the necessary changes after the source to target data synchronization is complete and all application data has been migrated to the target.
* Remove the configured array-to-array connectivity for the data migration pathway on both storage arrays.
Correct Order:
* Set up the migration environment to migrate applications from the source array to the target array.
* Why:This is the initial setup phase, where you configure the necessary settings on both the source and target arrays to enable the migration. This involves actions like:
* Verifying compatibility between the source and target arrays.
* Ensuring that the required licenses are in place (e.g., NDM license).
* Configuring network connectivity (FC or iSCSI) for data transfer between the arrays.
* Examine the specific storage for the applications on the source array and automatically provision equivalent storage on the target

array.

* Why:Before migrating data, you need to ensure that the target array has the appropriate storage capacity and configuration to host the applications.
* How:NDM can often automatically provision equivalent storage on the target based on the source configuration. This includes creating storage groups, volumes, and masking views that mirror the source.
* Initiate data synchronization from the source to the target and cutover to make source array paths inactive so target array services all host I/O.
* Why:This is the core of the migration process. Data is copied from the source to the target while the application continues to run. Cutover is the final step where I/O is redirected to the target array.
* How:
* Synchronization:Data is copied in the background.
* Cutover:Once synchronization is complete, a brief cutover is performed. In a well-planned NDM, this cutover is designed to be within the I/O timeout limits of most applications.
* Commit the necessary changes after the source to target data synchronization is complete and all application data has been migrated to the target.
* Why:This step finalizes the migration and makes it permanent.
* What it involves:The migration session is acknowledged and the configuration is finalized on the target array.
* Remove the configured array-to-array connectivity for the data migration pathway on both storage arrays.
* Why:After the migration is complete, the temporary connections used for data transfer between the arrays should be removed to free up resources and maintain a clean configuration.
* What it involves:This typically means removing the FC zones or iSCSI settings that were configured specifically for the NDM process.

NEW QUESTION # 29

A TimeFinder SnapVX snapshot of source volumes has been linked to target volumes. The target volumes are being used for application testing.
What should be done prior to a relink operation?

- A. Continue accessing the source volumes; stop accessing the target volumes
- B. Stop accessing the source volumes; continue accessing the target volumes
- C. Stop accessing the source and target volumes
- D. Continue accessing the source and target volumes

Answer: A

NEW QUESTION # 30

An administrator is using Unisphere for PowerMax Workload Planner to assess the performance and compliance of a PowerMax Storage Group (SG).
How does the Planner calculate if the Storage Group workload is fully compliant?

- A. Weighted SG average response times for the past 30 minutes
- B. Weighted SG average response time for the past 8 hours and past one week
- C. Weighted SG average response time for the past 4 hours and past one week
- D. Weighted SG average response time for the past 4 hours and past two weeks

Answer: D

NEW QUESTION # 31

What is the maximum number of systems controlled by Unisphere 360?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: D

NEW QUESTION # 32

A systems administrator has decommissioned a host with two devices allocated to it. What must the administrator do prior to deleting the devices?

- A. Remove the device attribute
- B. Delete the Initiators
- C. Unmap from the front-end ports
- D. Remove the Storage Group

Answer: D

NEW QUESTION # 33
