Customizable SAP Certified Associate - Security Administrator (C_SEC_2405) practice tests (desktop and web-based) of DumpExam are made to ensure excellent practice of applicants. Users can take multiple C_SEC_2405 practice exams. And the previous exam progress can be saved, so candidates can track it easily whenever they want to see the mistakes. The exam is tough to pass, and that's why C_SEC_2405 provides our customers with all the best SAP C_SEC_2405 exam dumps to pass the exam on the first try.

SAP Certified Associate - Security Administrator Sample Questions (Q77-Q82):

NEW QUESTION # 77

What are some of the rules for SAP-developed roles in SAP S/4HANA Cloud Public Edition? Note: There are 3 correct answers to this question.

- A. Role maintenance reads applications from role menus.
- B. Role maintenance reads applications from a catalog.
- C. Authorization defaults define role authorizations.
- D. Manual role authorizations are supported in custom catalogs.
- E. Catalogs are assigned to role menus.

Answer: B,C,E

Explanation:

SAP-developed roles in SAP S/4HANA Cloud Public Edition follow specific rules to ensure standardized and secure access management. Role maintenance reads applications from a catalog, meaning that roles are built by incorporating apps and tiles from predefined business catalogs, which group related functionalities.

Authorization defaults define role authorizations, as SAP provides default authorization values for applications within these catalogs, ensuring consistent and secure permission assignments. Additionally, catalogs are assigned to role menus, allowing roles to include entire sets of applications and their associated authorizations, streamlining role configuration. Manual role authorizations in custom catalogs (option C) are not supported for SAP-developed roles, as these rely on predefined configurations. Role maintenance does not read applications from role menus (option B), as menus are an output of the catalog assignment process.

These rules ensure that SAP-developed roles are efficient, secure, and aligned with business processes, providing a robust framework for access control in SAP S/4HANA Cloud Public Edition.

NEW QUESTION # 78

In SAP HANA Cloud, what can you configure in user groups? Note: There are 2 correct answers to this question.

- A. Client connect restrictions
- B. Authorization privileges
- C. Identity providers
- D. Password policy settings

Answer: A,D

Explanation:

In SAP HANA Cloud, user groups provide a mechanism to manage user settings collectively. Administrators can configure client connect restrictions within user groups to control which clients or applications can connect to the database, enhancing security by limiting access to authorized interfaces. Additionally, password policy settings can be defined for user groups, allowing administrators to enforce rules such as password length, complexity, or expiration periods, ensuring compliance with organizational security standards. Authorization privileges, however, are assigned directly to users or roles, not user groups, as groups in SAP HANA Cloud are not used for privilege management. Similarly, identity providers are configured at the system level, not within user groups, as they relate to authentication rather than group-specific settings. These capabilities enable efficient and secure user management in SAP HANA Cloud environments.

NEW QUESTION # 79

In SAP S/4HANA Cloud Public Edition, which of the following can you change in a derived business role if the "Inherit Spaces in Derived Business Roles" checkbox is NOT selected in the leading business role?

- A. Business Role Template
- B. Pages
- C. Restrictions
- **D. Business Catalogs**

Answer: D

Explanation:

If the "Inherit Spaces in Derived Business Roles" checkbox is not selected in the leading business role, you can still adjust Business Catalogs in the derived business role to refine access or align it with specific user requirements.

NEW QUESTION # 80

What use cases are available for a Local Identity Directory? Note: There are 3 correct answers to this question.

- **A. Hybrid mode**
- B. Merging attributes
- C. S/4HANA use case
- **D. Classic use case**
- **E. Proxy mode**

Answer: A,D,E

Explanation:

A Local Identity Directory in SAP Cloud Identity Services supports multiple use cases to manage user identities effectively. The Classic use case involves maintaining a standalone identity repository for user authentication and authorization, suitable for scenarios where a single, centralized directory is needed without external integration. The Hybrid mode allows the Local Identity Directory to work alongside other identity providers, enabling a mix of local and external user management, which is ideal for organizations transitioning to cloud environments while retaining on-premise systems. The Proxy mode enables the directory to act as an intermediary, forwarding authentication requests to external identity providers while maintaining local control over user attributes and policies. These use cases provide flexibility for diverse organizational needs. Merging attributes is a function of identity management but not a distinct use case, and S

/4HANA use case is not a specific term for Local Identity Directory configurations. These options ensure that SAP's identity management aligns with varying architectural and security requirements, supporting both cloud and hybrid landscapes.

NEW QUESTION # 81

In S/4HANA on-premise, which of the following combinations is required to grant a business user access to data from a Core Data Services (CDS) view using the standard ABAP authorization concept and authorization object S_RS_AUTH?

- **A. *A CDS role with access conditions based on authorization object S_RS_AUTH**
*APFCG role containing the CDS role and access conditions based up authorization object S_RS_AUTH
*Assignment of the PFCG role and the CDS role to the business user.
- B. *ACDS role with access conditions based on authorization object S_RS_AUTH
*A PFCG role with authorization for object S_RS_AUTH
*Assignment of the PFCG role to the business user. D.
- C. *A CDS role with access conditions based on authorization object S_RS_AUTH
*APFCG role containing the CDS role and access conditions based up authorization object S_RS_AUTH
*Assignment of the PFCG role to the business user. C.
- D. *A CDS role with access conditions based on authorization object S_RS_AUTH,
*APFCG role with authorization for object S_RS_AUTH and assignment of the PFCG role
*The CDS role to the business user.

Answer: A

NEW QUESTION # 82
