MCCQE Brain Exam, MCCQE Training Kit

It is very convenient for you to use the online version of our MCCQE real test. If you realize convenience of the online version, it will help you solve many problems. On the one hand, the online version is not limited to any equipment. You are going to find the online version of our MCCQE Test Prep applies to all electronic equipment, including telephone, computer and so on. On the other hand, if you decide to use the online version of our MCCQE study materials, you don't need to worry about no WLAN network.

Medical Council of Canada MCCQE Part 1 Exam Sample Questions (Q214-Q219):

NEW QUESTION # 214

A 23-year-old woman with borderline personality disorder is brought to the Emergency Department having ingested non-lethal substances after her boyfriend broke up with her. The staff tells you that she has consulted 8 times under similar circumstances in the past 3 years. Which one of the following pieces of information would be useful to provide to the staff?

- A. Suicidal thoughts must be an indication of major depressive disorder
- B. She will never commit suicide
- C. Symptoms of borderline personality disorder will likely attenuate over time
- D. Not much can be done with personality disorders
- E. She is overusing health care services

Answer: C

Explanation:

Comprehensive and Detailed Explanation:

While borderline personality disorder is challenging, symptoms (particularly impulsivity and suicidal behaviors) often attenuate with age and appropriate therapy (e.g., dialectical behavior therapy). Providing hope and clinical context to staff improves care and reduces stigma.

Toronto Notes 2023 - Psychiatry, "Personality Disorders":

"BPD is associated with emotional dysregulation and impulsivity. Long-term prognosis is better than once believed, with many patients showing symptom remission over time." MCCQE1 Objectives (Psychiatry > 71-4: Personality Disorders):

"Candidates must provide appropriate education to patients and staff regarding prognosis and treatment of BPD." Statements A-D are false, stigmatizing, or dangerous.

NEW QUESTION # 215

In a research study, it is found that people who smoke tobacco cigarettes drink more coffee and have higher rates of lung cancer than people who do not smoke. However, the consumption of coffee alone is not associated with lung cancer. Which one of the following best describes the contribution of drinking coffee in the study?

- A. Confounder
- B. Selection bias
- C. Risk factor
- D. Predictor

Answer: A

Explanation:

A confounder is a variable associated with both the exposure and the outcome but not in the causal pathway.

In this study, coffee drinking is associated with smoking (the actual risk factor for lung cancer), but not independently associated with lung cancer.

Toronto Notes 2023 - Epidemiology Chapter:

"A confounder is a third variable that distorts the observed association between an exposure and an outcome.

It must be associated with both the exposure and the outcome, but not a result of the exposure." MCCQE1 Objectives (Population Health > 97-3: Study Design and Bias):

"Recognize and control for confounding in the interpretation of observational study data." Coffee is not a risk factor (B) since it's not independently associated with lung cancer, and it's not selection bias (C), which involves how participants are enrolled in a study.

NEW QUESTION # 216

There are many expenses which are considered part of providing care to patients. Under Canadian legislation, which one of the following is an acceptable means of covering these costs?

- A. Collecting fees from patients who are seen after hours.
- B. Offering rapid access to insured services for a fee.
- C. Collecting fees from patients for home visits.
- D. Collecting annual fees from patients to supplement fees disbursed by the public payer for insured services.
- E. Collecting fees from patients for uninsured services provided.

Answer: E

Explanation:

Physicians in Canada may charge patients for uninsured services (e.g., completion of forms, cosmetic procedures, some travel-related vaccines), but they may not charge extra for insured services or preferential access. Doing so violates the Canada Health Act, which mandates accessibility and universality of insured services.

Toronto Notes 2023 - ELOM, Health Care System:

"Physicians may charge for uninsured services but may not charge block fees for insured services, nor can they charge for expedited access to insured services." MCCQE1 Objectives - ELOM > Health Policy and System:

"Candidates must recognize practices that violate the principles of publicly funded health care, including charging for insured services or access premiums." Option A is not permitted under law. Options B, D, and E involve insured services (e.g., home visits, after-hours care) and cannot be billed directly to patients.

NEW QUESTION # 217

A health authority implements the first-ever colon cancer screening program in its territory. Which one of the following colon cancer indices will likely increase?

- A. Case fatality rate
- **B. Incidence rate**
- C. Treatment rate
- D. Positive predictive value of the screening test
- E. Positive biopsy rate

Answer: B

Explanation:

When a screening program is introduced, the incidence rate appears to rise because more cases (including subclinical ones) are identified earlier. This is known as "lead-time bias" or "ascertainment bias." Toronto Notes 2023 - Public Health, Screening and Epidemiology:

"Screening increases the apparent incidence of disease as more early or latent cases are detected." MCCQE1 Objectives - Preventive Medicine > Screening:

"Candidates should understand how implementation of screening programs affects disease incidence and epidemiologic metrics." Case fatality rate (A) may decrease. PPV (B) depends on prevalence. Positive biopsy rate (C) may remain stable. Treatment rate (E) could increase, but incidence is the most directly and consistently affected.

NEW QUESTION # 218

A 14-year-old girl, accompanied by her mother, presents to your office with a 3-month history of feeling "dizzy." After you take an initial history, which one of the following is the most appropriate next step?

- A. Do a bedside glucometer reading
- B. Order a urine pregnancy test
- **C. Interview the girl without the mother present**
- D. Perform a detailed cardiac and neurological examination
- E. Obtain growth parameters and vital signs

Answer: C

Explanation:

In adolescents presenting with vague or potentially sensitive symptoms, it is critical to speak with them alone to obtain a complete and honest history, including mental health, sexual activity, substance use, and abuse screening.

Toronto Notes 2023 - Pediatrics, Adolescent Medicine:

"Private interviews are essential to obtain accurate histories in adolescents, especially when symptoms may have underlying psychosocial or reproductive causes." MCCQE1 Objectives - Pediatrics > Adolescent Health:

"Candidates must demonstrate adolescent-appropriate interviewing techniques, including private questioning to identify sensitive or risk-related concerns." Physical examination and pregnancy testing (A, B, D) may follow based on the private history. Vital signs (E) are standard but do not replace psychosocial assessment.

NEW QUESTION # 219

.....

Our to-the-point and trustworthy MCCQE Part 1 Exam Exam Questions in three formats for the Medical Council of Canada MCCQE certification exam will surely assist you to qualify for Medical Council of Canada MCCQE Certification. Do not underestimate the value of our Medical Council of Canada MCCQE exam dumps because it is the make-or-break point of your career.
