Which three things happen during a failover in which the passive FortiGate VM becomes the master cluster member in an active-passive high-availability (HA) environment? (Choose three.)

- A. The health check ensures that incoming traffic to the ephemeral external IP address of the load balancer is forwarded to the new active cluster member.
- B. The health check status will indicate that the old active cluster member is unhealthy.
- C. The Management IP address moves from port3 of the current active member to port3 of the new active cluster member.
- D. The custom route is updated using API calls to forward all traffic to port2 of the new active cluster member device.
- E. The health check for the passthrough load balancers forces internal traffic to route to port2 of the new active cluster member.

Answer: A,B,D
