Excellent GitHub-Actions exam brain dumps offer you high-quality practice questions - itPass4sure

You may find that there are a lot of buttons on the website which are the links to the information that you want to know about our GitHub-Actions exam braindumps. Also the useful small buttons can give you a lot of help on our GitHub-Actions study guide. Some buttons are used for hide or display answers. What is more, there are extra place for you to make notes below every question of the GitHub-Actions practice quiz. Don't you think it is quite amazing? Just come and have a try!

GitHub Actions Certificate Exam Sample Questions (Q48-Q53):

NEW QUESTION # 48

Which default GitHub environment variable indicates the owner and repository name?

- A. GITHUB WORKFLOW REPO
- **B. REPOSITORY NAME**
- C. ENV REPOSITORY
- D. GITHUB REPOSITORY

Answer: B

Explanation:

The GITHUB_REPOSITORY environment variable contains the owner and repository name in the format owner/repository. It is automatically provided by GitHub Actions and can be used to reference the repository in workflows.

NEW QUESTION # 49

Which scopes are available to define custom environment variables within a workflow file? (Choose three.)

- A. the entire workflow, by using env at the top level of the workflow file
- B. all jobs being run on a single Actions runner, by using runner.env at the top of the workflow file
- C. the contents of a job within a workflow, by using jobs.<job_id>.env
- D. the entire stage, by using env at the top of the defined build stage
- E. within the run attribute of a job step
- F. a specific step within a job, by using jobs.<job_id>.steps[*].env

Answer: A,E,F

Explanation:

You can define environment variables for the entire workflow by using the env key at the top level of the workflow file. These environment variables will be available to all jobs and steps within the workflow.

Environment variables can also be set within the run attribute of a job step, and these variables will be scoped only to that specific step.

You can set environment variables for specific steps within a job by using jobs.<job_id>.steps[*].env, which allows you to define variables that will only be available to that step.

NEW QUESTION # 50

What is the minimal syntax for declaring an output named foo for an action?

- A.

```
outputs:
  - key: foo
    description: Some value
```
- B.

```
outputs:
  foo:
    value: Some value
```
- C.

```
outputs:
  - key: foo
    value: Some value
```
- D.

```
outputs:
  foo:
    description: Some value
```

Answer: B

Explanation:

The correct minimal syntax for declaring an output in GitHub Actions is by using the foo key under outputs, and associating it with a value (in this case, Some value). This is the simplest form to define an output in a workflow or action.

NEW QUESTION # 51

Your organization is managing secrets using GitHub encrypted secrets, including a secret named SuperSecret.

As a developer, you need to create a version of that secret that contains a different value for use in a workflow that is scoped to a specific repository named MyRepo. How should you store the secret to access your specific version within your workflow?

- A. Create a duplicate entry for SuperSecret in the encrypted secret store and specify MyRepo as the scope.
- B. Create and access SuperSecret from the secrets store in MyRepo.
- C. Create a file with the SuperSecret information in the .github/secrets folder in MyRepo.
- D. Create MyRepo_SuperSecret in GitHub encrypted secrets to specify the scope to MyRepo.

Answer: D

Explanation:

To scope a secret to a specific repository, you can create a new secret with a name like MyRepo_SuperSecret in the secrets section of the MyRepo repository's settings. This ensures that the secret is specific to that repository and can be used within its workflows.

NEW QUESTION # 52

Which of the following is the best way for an enterprise to prevent certain marketplace actions from running?

- A. Create a list of the actions that are allowed to run as an enterprise policy. Only these actions can be run.
- B. Create a list of the actions that are restricted from being used as an enterprise policy. Every other action can be run.
- C. Create a list that is maintained as a . yml file in a . github repository specified in the enterprise. Only these actions can be run.
- D. It is not possible; if an action is in the marketplace, its use cannot be restricted.

Answer: A

Explanation:

The best way for an enterprise to control which GitHub Actions run is by creating a list of approved actions as an enterprise policy. This approach restricts workflows to only use the actions that are explicitly allowed, ensuring security and compliance within the organization.

NEW QUESTION # 53

.....

GitHub GitHub-Actions authentication certificate is the dream IT certificate of many people.
