

Exam Google Generative-AI-Leader Score & Generative-AI-Leader PDF

2025 Latest ActualCollection Generative-AI-Leader PDF Dumps and Generative-AI-Leader Exam Engine Free Share:
<https://drive.google.com/open?id=1ldokU6XKYYmwZZJJXrc1e4yXO95h1G0P>

Our Generative-AI-Leader practice dumps are so popular that all our customers are giving high praise on its high-quality to help them pass the exams. Numerous of warming feedbacks from our worthy customers give us data and confidence. We have clear data collected from customers who chose our Generative-AI-Leader training engine, the passing rate is 98-100 percent. So your chance of getting success will be increased greatly by our Generative-AI-Leader exam questions!

Moreover, you do not need an active internet connection to utilize ActualCollection desktop Google Cloud Certified - Generative AI Leader Exam practice exam software. It works without the internet after software installation on Windows computers. The ActualCollection web-based Google Generative-AI-Leader Practice Test requires an active internet and it is compatible with all operating systems.

Generative-AI-Leader PDF, Generative-AI-Leader Trustworthy Practice

Compared with other education platform on the market, ActualCollection is more reliable and highly efficiently. It provide candidates who want to pass the Generative-AI-Leader exam with high pass rate Generative-AI-Leader study materials, all customers have passed the Generative-AI-Leader Exam in their first attempt. They all need 20-30 hours to learn on our website can pass the Generative-AI-Leader exam. It is really a high efficiently exam tool that can help you save much time and energy to do other things.

Google Cloud Certified - Generative AI Leader Exam Sample Questions (Q25-Q30):

NEW QUESTION # 25

What are core hardware components of the infrastructure layer in the generative AI landscape?

- A. Pre-trained models
- B. User interfaces

- C. Tools and services for building AI models
- **D. TPUs and GPUs**

Answer: D

Explanation:

The Generative AI landscape is often broken down into several functional layers: Applications, Agents, Platforms, Models, and Infrastructure.

The Infrastructure Layer is the foundation, providing the physical and virtual computing resources necessary to run and train the large models. These resources include servers, storage, networking, and most importantly, the specialized hardware accelerators required for high-volume, parallel computation.

The core hardware components are the Graphics Processing Units (GPUs) and the custom-designed Tensor Processing Units (TPUs) (A). These accelerators are optimized for the massive matrix operations fundamental to deep learning and Gen AI model training and inference.

Options B (User interfaces) and D (Tools and services) refer to the Application and Platform layers, respectively.

Option C (Pre-trained models) refers to the Model layer.

The physical hardware underpinning these abstract layers are the TPUs and GPUs.

(Reference: Google Cloud Generative AI Study Guides state that the Infrastructure Layer provides the core computing resources needed for generative AI, including the physical hardware (like servers, GPUs, and TPUs) and the essential software needed to train, store, and run AI models.)

NEW QUESTION # 26

The office of the CISO wants to use generative AI (gen AI) to help automate tasks like summarizing case information, researching threats, and taking actions like creating detection rules. What agent should they use?

- A. Data agent
- B. Code agent
- **C. Security agent**
- D. Customer service agent

Answer: C

Explanation:

Given the tasks involve researching threats and creating detection rules, the most appropriate and specialized agent would be a Security agent. This type of agent would be pre-configured or easily adaptable to understand security-specific contexts, data, and actions within a CISO's domain.

NEW QUESTION # 27

A global news company is using a large language model to automatically generate summaries of news articles for their website. The model's summary of an international summit was accurate until it hallucinated by stating a detail that did not occur. How should the company overcome this hallucination?

- **A. Use grounding to base the model output on the source articles.**
- B. Implement stricter safety settings to filter out potentially controversial topics.
- C. Increase the temperature setting of the model to encourage more diverse outputs.
- D. Fine-tune the model on a larger dataset of news articles.

Answer: A

Explanation:

The core problem is the model's hallucination-it invented a factual detail-in a context (news reporting) where factual accuracy is non-negotiable. To correct a factual error in a generative summary, the model must be constrained to speak only based on verifiable facts from a reliable source.

The most effective technique to combat hallucinations and ensure factual adherence is Grounding (D). Grounding connects the Large Language Model's (LLM's) output to a specific, trusted, and verifiable source of information. This is often implemented using Retrieval-Augmented Generation (RAG). In this scenario, grounding the summary model on the original source articles ensures that every generated statement is directly entailed by the provided facts (the source article content).

Option B, fine-tuning, is expensive and only updates the model's general knowledge and style; it does not prevent the model from

guessing or fabricating details when retrieving information. Option C, increasing temperature, would make the output less consistent and more diverse, likely increasing the chance of hallucination, which is the opposite of the desired effect. Option A is unrelated to factual accuracy. Therefore, Grounding is the necessary step to anchor the model's responses to the true content of the source articles.

(Reference: Google Cloud documentation on RAG/Grounding emphasizes that its primary purpose is to address the "knowledge cutoff" and hallucination issues of LLMs by retrieving relevant, up-to-date information from external knowledge sources and using this retrieved information to ground the LLM's generation, ensuring factual accuracy.)

NEW QUESTION # 28

What does Model Garden enable a company to do?

- **A. Discover, customize, and deploy existing models from Google and its partners.**
- B. Manage different versions of a model, including the code, data, and parameters used to train it.
- C. Evaluate the performance of different models using various metrics.
- D. Train new models from scratch using large datasets.

Answer: A

Explanation:

Model Garden is a key component of the Vertex AI Platform on Google Cloud, positioned as an AI/ML model library. Its core function is to provide a central, organized place for users to find and utilize a wide variety of machine learning assets.

Specifically, Model Garden enables customers to:

Discover a curated collection of models, including Google's latest Foundation Models (like Gemini and Imagen), specialized models, and enterprise-ready models from Google partners and the open-source community (e.g., Gemma).

Test and customize these models, often with tools like Vertex AI Studio for prompt tuning or fine-tuning with custom data.

Deploy the selected and customized models directly to applications with a consistent deployment pattern.

Options B and C describe features of other MLOps tools within Vertex AI (Model Evaluation and Model Registry/Metadata Management). Option D describes the Custom Training service within Vertex AI. Model Garden's unique value proposition is acting as the starting point: a marketplace or repository to discover and immediately deploy or customize existing, pre-trained models.

(Reference: Google Cloud documentation states that Model Garden on Vertex AI is a place to discover, test, customize, and deploy a wide variety of models from Google and Google partners, including first-party and open-source models.)

NEW QUESTION # 29

A company is developing a generative AI application to analyze customer feedback collected through online surveys. Stakeholders are concerned about potential privacy risks associated with this data, as the feedback contains personally identifiable information (PII). They need to mitigate these risks before using the data to train the AI model. What action should the company prioritize?

- **A. Applying data anonymization techniques to remove or obscure sensitive data.**
- B. Implementing strong access controls to limit which teams can view the raw survey data.
- C. Focusing on collecting only quantitative feedback data in future surveys.
- D. Ensuring that the AI model is trained on a large and diverse dataset.

Answer: A

Explanation:

The problem is the existence of Personally Identifiable Information (PII) within the customer feedback data, which introduces privacy risks for the development and training of the generative AI model. The goal is to mitigate these risks before using the data to train the AI model.

According to Google's Responsible AI and data handling best practices, when sensitive data like PII is present in a dataset intended for model training, the most critical step to prioritize is data minimization and privacy protection at the source. This is often achieved through anonymization or de-identification.

Applying data anonymization techniques (D) directly addresses the risk by removing or obscuring the sensitive data elements. This prevents the PII from being embedded into the model's parameters during training, thereby eliminating the risk of data leakage or privacy violations in the AI application's outputs. This is a crucial early step in the ML lifecycle for datasets containing sensitive information.

Option C, implementing access controls, is a necessary security measure but is a reactive control that protects the raw data; it does not remove the PII risk from the derived model itself. Option A is a long-term change to data collection but doesn't solve the problem for the existing data. Option B relates to bias and accuracy, not specifically PII risk mitigation.

(Reference: Google Cloud's Secure AI Framework (SAIF) and Responsible AI principles emphasize protecting sensitive data at all

stages of the ML lifecycle, with de-identification being the primary method before training.)

NEW QUESTION # 30

.....

For everyone, time is money and life. Are you still hesitant about selecting what kind of Generative-AI-Leader exam materials? We have a high reputation on the career to help our customers pass their exams and get their desired certifications. There is no exaggeration to say that you can pass the Generative-AI-Leader Exam with ease after studying with our Generative-AI-Leader practice guide for 20 to 30 hours. Numerous of the candidates have been benefited from our exam torrent and they obtained the achievements just as they wanted.

Generative-AI-Leader PDF: <https://www.actualcollection.com/Generative-AI-Leader-exam-questions.html>

Google Exam Generative-AI-Leader Score This is training product that specifically made for IT exam, ActualCollection Generative-AI-Leader PDF is proud to provide the best top-quality ActualCollection Generative-AI-Leader PDF certification questions in the market and we have the most competitive and straightforward money-back guarantee, You can totally trust our Generative-AI-Leader practice test because all questions are created based on the requirements of the certification center.

As discussed earlier, if fields may vary in length, then Generative-AI-Leader PDF a maximum allowable length must be defined, with the attendant risks, Finally, in The Fearful Rise of Markets, top Financial Times global finance journalist Exam Generative-AI-Leader Score John Authers reveals how the first truly global super bubble was inflated, and may now be inflating again.

Ace Google Generative-AI-Leader Exam in a Short Time with Real Questions

This is training product that specifically made for IT exam, ActualCollection is proud Generative-AI-Leader Complete Exam Dumps to provide the best top-quality ActualCollection certification questions in the market and we have the most competitive and straightforward money-back guarantee.

You can totally trust our Generative-AI-Leader Practice Test because all questions are created based on the requirements of the certification center, Generative-AI-Leader pass4sure test torrent may help you and solve your confusion and worries.

Google Google Cloud Certified is the industry leader in information Generative-AI-Leader technology, and getting certified by them is a guaranteed way to succeed with IT careers.
