100% Pass Quiz 2025 Juniper Professional Exam JN0-253 Bible

If you are curious or doubtful about the proficiency of our JN0-253 preparation quiz, we can explain the painstakingly word we did behind the light. By abstracting most useful content into the JN0-253 exam materials, they have helped former customers gain success easily and smoothly. The most important part is that all contents were being sifted with diligent attention. No errors or mistakes will be found within our JN0-253 Study Guide.

Juniper Mist AI, Associate (JNCIA-MistAI) Sample Questions (Q33-Q38):

NEW QUESTION # 33
Where do reminders about subscription expiration appear in the Juniper Mist portal?

- A. In a banner message at the top of the Juniper Mist portal
- B. In the dashboard alerts
- C. In Marvis Actions
- D. In the device's insights section

Answer: A

Explanation:
Juniper Mist Cloud provides visual and automated notifications to alert administrators aboutsubscription status and expirationfor services such asWireless Assurance, Wired Assurance, WAN Assurance, Premium Analytics, and Marvis AI.
According to theJuniper Mist Cloud Administration and Licensing Guide, the system:
"Displays subscription and license expiration warnings in a banner across the top of the Mist portal interface when licenses are within their renewal window." This banner typically appears in yellow or red, depending on urgency, and includes direct links to the Subscriptionspage for renewal actions.
While subscription status information can also be viewed manually underOrganization # Subscriptions, the real-time reminders and notificationsappear asbanner messages at the top of the Mist Portal.
OptionsB,C, andDare incorrect because:
* Dashboard alerts focus on network events, not licensing.
* Marvis Actions highlights operational or performance issues.
* Device insights report performance metrics, not subscription data.
Therefore, the correct answer isA. In a banner message at the top of the Juniper Mist portal.

NEW QUESTION # 34
Which two Mist location tracking components run in the cloud? (Choose two.)

- A. location sensor
- B. location system
- C. location engine
- D. BLE tag

Answer: B,C

Explanation:
Location Engine: The location engine runs in the cloud and processes data from BLE tags and sensors to determine the location of devices within a network. It performs the necessary computations to provide accurate location tracking and analytics.
Location System: The location system, also cloud-based, integrates with the location engine to provide a complete solution for tracking and managing location data within Mist's ecosystem. This system supports various applications such as asset tracking, wayfinding, and proximity-based services.

NEW QUESTION # 35
When a Juniper Mist managed switch is powered on, which event must be completed prior to the Zero-Touch Provisioning (ZTP) process moving forward?

- A. A DHCP lease must be obtained by the switch.
- B. NETCONF must be configured on the switch.
- C. The switch's clock must be synchronized with an NTP server.
- D. All user accounts must be configured on the switch.

Answer: A

Explanation:
A DHCP lease must be obtained by the switchbefore the ZTP process proceeds. Juniper documentation clarifies: "Ensure that a DHCP server is reachable. In addition to providing an IP address to the switch, your DHCP server must provide the following information: a default gateway, an NTP server, and a DNS server address..." The initial event in the ZTP workflow is the switch receiving a valid IP address via DHCP. Only after obtaining an address can the switch connect to the Mist cloud and proceed with zero-touch provisioning.
Other requirements, such as user account, NETCONF, or NTP sync, occur later or are handled automatically via cloud policy after onboarding.

NEW QUESTION # 36
When viewing the LATEST UPDATES on the Marvis Actions page, you see an action labeled AI VALIDATED.
What does this status mean?

- A. The issue is unresolved.
- B. The issue is resolved but was not manually marked resolved.
- C. The issue was marked resolved by an administrator.
- D. The issue was identified and resolved entirely by Marvis.

Answer: D

Explanation:
In theJuniper Mist Marvis Actions dashboard, issues and recommendations are displayed with status labels indicating their progress and resolution method. One of these statuses isAI VALIDATED, which signifies that the issue was automatically detected, diagnosed, and resolved byMarvis AIwithout requiring manual intervention.
According to theJuniper Mist Marvis Virtual Network Assistant Operations Guide:
"AI VALIDATED indicates that Marvis has confirmed and resolved a network issue autonomously using AI- driven automation and telemetry correlation." This means Marvis performed the full troubleshooting cycle-identifying the anomaly, validating its cause, and confirming resolution-based on continuous monitoring and real-time network analytics.
Other statuses include:
* UNRESOLVED:Issue is ongoing and needs attention.
* RESOLVED:Marked manually by an administrator after resolution.
* AI VALIDATED:Confirmed and closed automatically by Marvis AI.
Therefore, the correct answer isA. The issue was identified and resolved entirely by Marvis.

NEW QUESTION # 37
Which data format is used for exchanging data with the Juniper Mist REST API?

- A. protocol buffers
- B. YAML
- C. XML
- D. JSON

Answer: D

Explanation:
The Juniper Mist REST API uses the JSON (JavaScript Object Notation) format for data exchange. The official Juniper Mist REST API overview states: "Juniper Mist uses REST APIs, which use HTTP methods (GET, POST, PUT, and DELETE) to transfer data in JavaScript Object Notation (JSON) format." All interactions with the API involve sending request payloads in JSON, and receiving responses encoded in JSON as well. Juniper Mist's automation and integration guides reinforce that the content type for API communications is always "application/json". Sample requests provided in the documentation, such as creation or feedback fromPOST, PUT, and GET methods, are displayed in JSON structure.
Unlike other formats such as YAML, XML, or protocol buffers, JSON is universally supported and highly favored for RESTful APIs because it is lightweight, human readable, and easily parsed by web and programming frameworks. This ensures consistency and compatibility across diverse integrations and automation workflows using the Mist platform.
