Easily Prepare Exam Using Microsoft MB-820 Desktop Practice Test Software

These features have made TestPDF MB-820 pdf questions format the most reputable prep material for the quick and restrictions-free exam preparation. As laptops, tablets, and smartphones support this Microsoft MB-820 pdf format, you can easily learn from your comfort zone in your free time.

Microsoft Dynamics 365 Business Central Developer Sample Questions (Q60-Q65):

NEW QUESTION # 60

A company uses Business Central. The company is generating a detailed custom report.

A user observes that the generated report dataset contains more Delivery Line records than expected for one specific Delivery Header.

You need to generate a report that contains the accurate number of records.

```
dataitem("Delivery Header"; "Delivery Header")
    {
        column(No_; "No.") { }
        column(Customer_Name; "Customer Name") { }
        dataitem("Delivery Line"; "Delivery Line")
        {
            column(Document_No_; "Document No.") { }
            column(Delivery_Address; "Delivery Address") { }
        }
    }
```

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Property configuration statements

Statement	Yes	No
Configure the DataItemTableView property of the Delivery Header data item.	○	○
Configure the RequestFilterFields property of both data items.	○	○
Configure the DataItemLink property of the Delivery Line table.	○	○

Answer:

Explanation:

Property configuration statements

Statement	Yes	No
Configure the DataItemTableView property of the Delivery Header data item.	○	○
Configure the RequestFilterFields property of both data items.	○	○
Configure the DataItemLink property of the Delivery Line table.	○	○

Explanation:

The report generated by the company contains more Delivery Line records than expected for one specific Delivery Header. To address this, certain properties within the report's data items need to be configured correctly.

Property Configuration Statements:

* Configure the DataItemTableView property of the Delivery Header data itemThis property defines the view (filtering and sorting) for a data item in a report. If the DataItemTableView is not configured properly, it might pull in more records than expected.answer: Yes. By configuring this property, you can control which Delivery Header records are retrieved, preventing excess records.

* Configure the RequestFilterFields property of both data itemsThis property allows the user to set fields to filter on the request page of the report. Configuring the filter fields can help users refine the records being retrieved for both Delivery Header and Delivery Line.answer: Yes. By setting appropriate filters on both data items, users can control which records to include, which is critical in narrowing down the correct data.

* Configure the DataItemLink property of the Delivery Line tableThis property links two data items based on common fields. If not configured properly, more Delivery Line records than expected might be retrieved because the link between Delivery Header and Delivery Line might not be accurate.

answer: Yes. Configuring the DataItemLink ensures that only the Delivery Line records associated with the specific Delivery Header are retrieved, avoiding an excess of records.

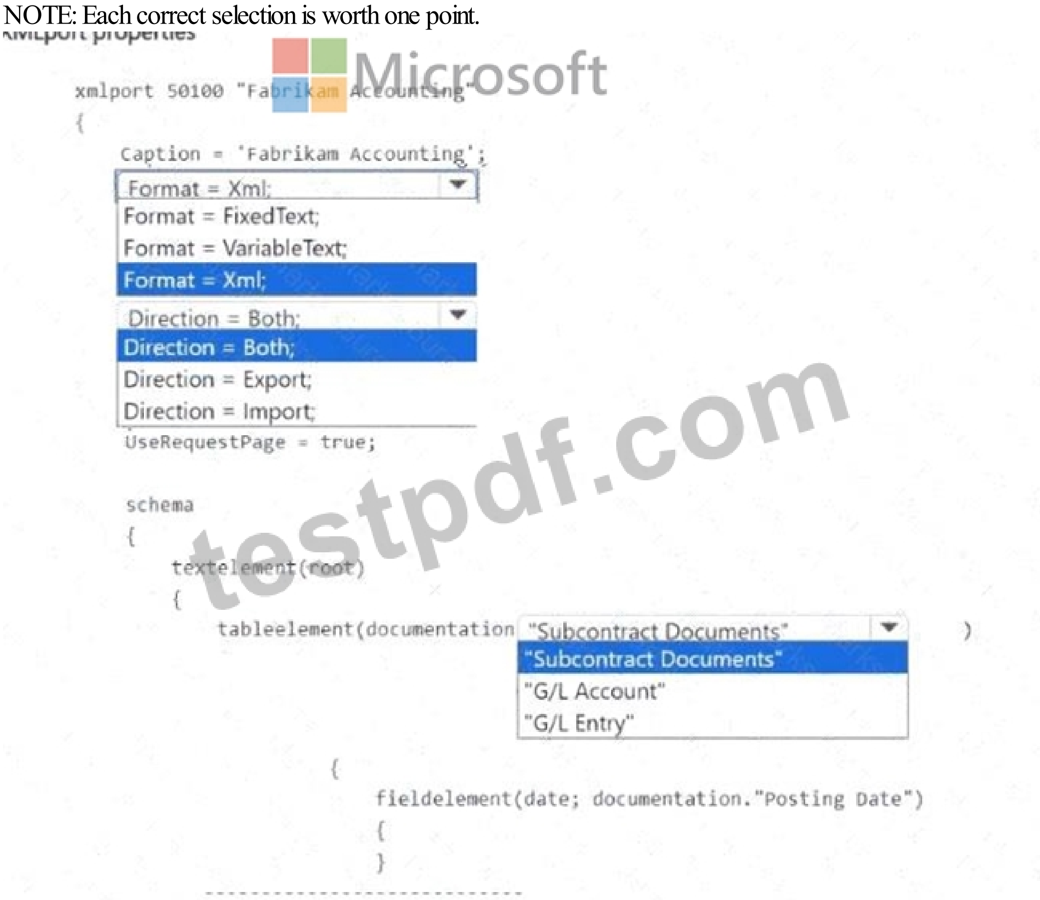
Conclusion:

* DataItemTableView property of Delivery Header data item # Yes

* RequestFilterFields property of both data items # Yes

* DataItemLink property of Delivery Line table # Yes
Each configuration is necessary for generating the correct number of records in the report dataset.

NEW QUESTION # 61
You need to define the XML file properties for the accounting department.
How should you complete the code segment? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.



Answer:

Explanation:

XMLport properties

```
xmlport 50100 "Fabrikam Accounting"
{
    Caption = 'Fabrikam Accounting';
    Format = Xml;
    Format = FixedText;
    Format = VariableText;
    Format = Xml;
    Direction = Both;
    Direction = Both;
    Direction = Export;
    Direction = Import;
    UseRequestPage = true;

    schema
    {
        textelement(root)
        {
            tableelement(documentation  "Subcontract Documents"  )
                                        "Subcontract Documents"
                                        "G/L Account"
                                        "G/L Entry"
            {
                fieldelement(date; documentation."Posting Date")
                {
                }
```

Explanation:

XMLport properties

```
xmlport 50100 "Fabrikam Accounting"
{
    Caption = 'Fabrikam Accounting';
    Format = Xml;
    Direction = Both;
    UseRequestPage = true;

    schema
    {
        textelement(root)
        {
            tableelement(documentation  "Subcontract Documents"  )
            {
                fieldelement(date; documentation."Posting Date")
                {
```

NEW QUESTION # 62

You are developing an app that will be published to Microsoft AppSource.

The app requires code analyzers to enforce some rules. You plan to add the analyzers to the settings.json file.

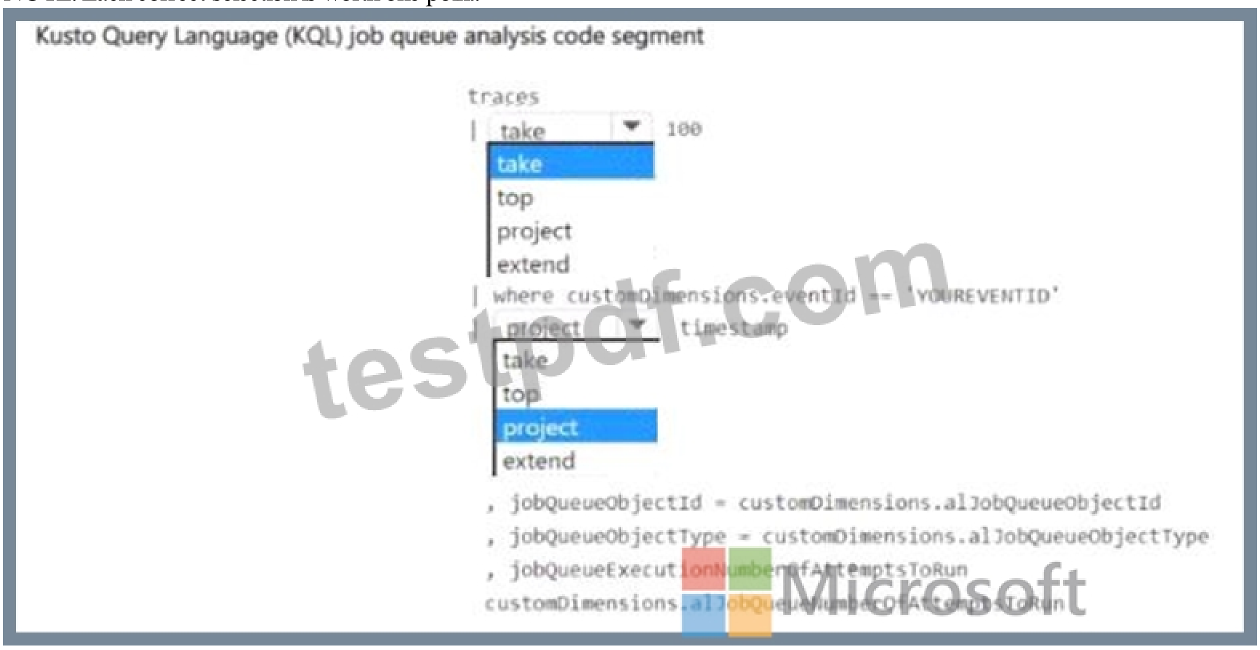
You need to activate the analyzers for the project.
Which three code analyzers should you activate to develop the app for AppSource? Each correct answer presents part of the solution NOTE: Each correct selection is worth one point.

- A. UICop
- B. a custom rule set
- C. CodeCop
- D. PerTenantExtensionCop
- E. AppSourceCop

Answer: C,D,E

Explanation:
When developing an app for Microsoft AppSource, it is crucial to adhere to specific guidelines and standards to ensure compatibility and compliance. The three code analyzers you should activate are:
CodeCop (A): This is the default analyzer for AL language extensions. It enforces the AL Coding Guidelines, ensuring that the code follows best practices for readability, maintainability, and performance. It checks for a wide range of issues, from syntax errors to best practice violations, making it essential for any AL development.
PerTenantExtensionCop (D): This analyzer is specifically designed for extensions that are intended to be installed for individual tenants. It includes rules that ensure the extension does not interfere with the per-tenant customizations and adheres to the guidelines for extensions that can be safely installed and uninstalled without affecting the underlying application.
AppSourceCop (E): This analyzer is tailored for extensions that are intended for publication on Microsoft AppSource. It enforces additional rules that are specific to AppSource submissions, such as checking for the use of reserved object ranges and ensuring that all prerequisite dependencies are correctly declared. This is crucial for ensuring that your app meets all the requirements for listing on AppSource.
By activating these three analyzers, developers can ensure their app adheres to the standards required for AppSource, as well as maintain high code quality and compatibility with Business Central.

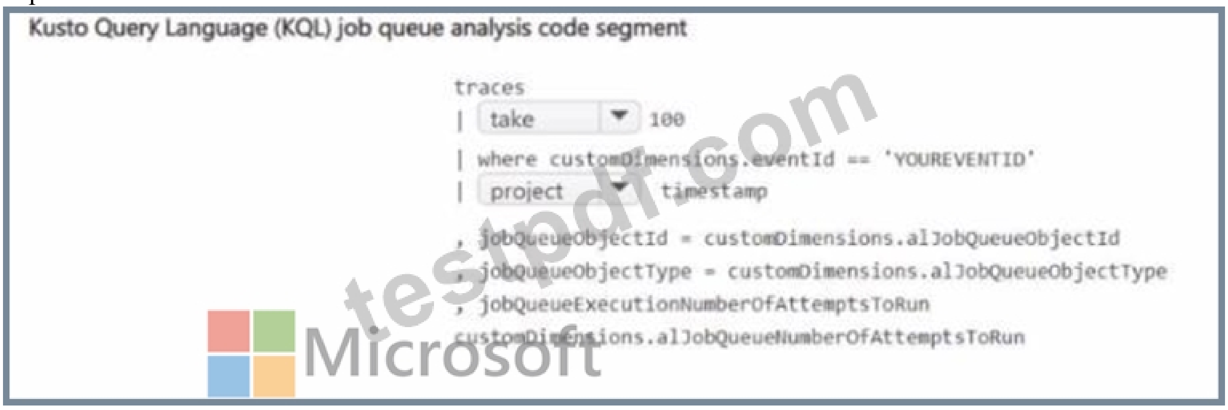
NEW QUESTION # 63
A company uses Azure Application Insights for Business Central online in its production environment.
A user observes that some job queues go into the failed state and require manual intervention.
You need to analyze job queue lifecycle telemetry.
How should you complete the code segment? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.



Answer:

Explanation:

Explanation:



KQL Code Segment:
* First command (traces):
* The query begins with traces to analyze telemetry data logs. The next command determines how the results are filtered or displayed.
* take 100: This is the correct option to retrieve the top 100 rows from the traces table.
* Command for selecting fields:
* project: This command is used to select specific fields from the telemetry data, allowing you to retrieve and display only the fields relevant to the job queue telemetry.
* The correct answer is project, as it allows you to choose fields like jobQueueObjectId, jobQueueObjectType, etc., from the customDimensions table.

NEW QUESTION # 64

A company is implementing Business Central.
The company has the following requirements for a report:
* The report must be loaded for users in a specific location only.
* Data entered in the request page must be validated before any further processing.
* A filter must be defined for users based on the Department field defined in user setup.
You need to implement the given requirements.
Which triggers should you use? To answer, move the appropriate triggers to the correct requirements. You may use each trigger once, more than once, or not at all. You may need to move the split bar between panes or scroll to view content.
NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:
* Load the report for users in a specific location: OnInitReport
* Validate data before processing: OnPreReport
* Define filter based on Department field: OnPreDataItem

The requirements for the report are:
* The report must be loaded for users in a specific location only.
* Data entered in the request page must be validated before any further processing.
* A filter must be defined for users based on the Department field defined in user setup.

Trigger Matching:
* The report must be loaded for users in a specific location only.The correct trigger for loading the report is OnInitReport.
* This trigger runs when the report is initialized, and you can use it to define user-specific loading conditions, like location-based filtering.
* Data entered in the request page must be validated before any further processing.The correct trigger for validation before processing is OnPreReport.
* This trigger occurs before the report is run and can be used for data validation before further processing begins.
* A filter must be defined for users based on the Department field defined in user setup.The correct trigger to define filters is OnPreDataItem.
* This trigger occurs before data item processing begins and is used to apply filters such as those based on the Department field in the user setup.
