MTCNA Certification Exam | MTCNA Exam Preparation

We regard the customer as king so we put a high emphasis on the trust of every users, therefore our security system can protect you both in payment of MTCNA guide braindumps and promise that your computer will not be infected during the process of payment on our MTCNA Study Materials. Moreover, if you end up the cooperation between us, we have the responsibility to delete your personal information on MTCNA exam prep. In a word, We have data protection act for you to avoid information leakage!

MikroTik Certified Network Associate Exam Sample Questions (Q109-Q114):

NEW QUESTION # 109

How many DHCP servers can be configured per interface on RouterOS?

- A. Two
- B. Unlimited
- **C. One**
- D. Five

Answer: C

NEW QUESTION # 110

What letters appear next to a route, which is automatically created by RouterOS when user adds a valid address to an active interface?

- A. I
- **B. C**
- **C. A**
- D. S
- **E. D**

Answer: B,C,E

NEW QUESTION # 111

Which of the following keystrokes enables safe mode in console?

- A. Ctrl+c
- **B. Ctrl+s**
- C. Ctrl+d
- D. Ctrl+x

Answer: B

Explanation:

Safe Mode in MikroTik CLI is a protective mode that helps revert any unintended changes if you get disconnected. It is activated by pressing Ctrl+X in older versions, but the current standard keybinding for enabling safe mode is Ctrl+S.

MTCNA Course Material - Safe Mode:

"To enable safe mode in the terminal, press Ctrl+S. A confirmation [Safe Mode] will appear in the prompt. If the terminal is closed or disconnected, the changes are rolled back." Rene Meneses MTCNA Study Guide - Terminal Commands:

"Safe Mode can be activated using Ctrl+S. This is useful during remote configuration. It reverts changes if the terminal is closed."

MikroTik Wiki - Safe Mode Section:

"To enter safe mode, press Ctrl+S in CLI. This ensures configuration rollback if disconnected." Other options:

- * Ctrl+C terminates commands or CLI input
- * Ctrl+X may not activate safe mode in newer versions
- * Ctrl+D is used to log out in some Unix-like terminals

Correct answer: Ctrl+S

NEW QUESTION # 112

Bridging loops can be avoided by enabling:

- A. UDP filter
- **B. STP protocol**
- **C. RSTP protocol**
- D. ICMP filter
- E. Connection tracking

Answer: B,C

Explanation:

Bridging loops occur when there are multiple active paths between switches or bridge interfaces, causing broadcast storms or MAC table instability. MikroTik RouterOS supports both STP (Spanning Tree Protocol) and RSTP (Rapid Spanning Tree Protocol) to detect and block redundant paths.

- * A.#RSTP - Faster and preferred protocol to prevent loops.
- * B.#STP - The original protocol, slower convergence but still effective.
- * C.#Connection tracking - Not related to Layer 2 loop prevention.
- * D.#UDP filter - Filters specific traffic types, doesn't handle loops.
- * E.#ICMP filter - Not relevant to Layer 2 loop protection.

Extract from Official MTCNA Course Material - Bridging and STP:

"STP or RSTP must be enabled to prevent bridging loops. RSTP is the recommended version due to faster convergence." Extract from Rene Meneses MTCNA Study Guide - Bridging:

"Always enable STP or RSTP when using bridges with multiple paths to prevent Layer 2 loops." Extract from MikroTik Wiki - STP / RSTP:

"STP and RSTP are loop prevention mechanisms for bridges. They dynamically block redundant links."

NEW QUESTION # 113

If arp=reply-only is configured on an interface, what will this interface do?

- A. Accept all IP addresses listed in /ip arp as static entries
- B. Accept all MAC addresses listed in /ip arp as static entries
- C. Add new MAC addresses in /ip arp list
- D. Add new IP addresses in /ip arp list
- E. Accept all IP/MAC combinations listed in /ip arp as static entries

Answer: E

Explanation:

Setting arp=reply-only on an interface disables the normal dynamic ARP process. The router will only respond to ARP requests for IP/MAC pairs that are explicitly listed in /ip arp with type=static. No dynamic entries will be added.

MikroTik Wiki - ARP Modes:

"reply-only - the interface will only reply to ARP requests if there is a static entry. It will not add any new entries." MTCNA Course Material - ARP Configuration:

"When reply-only is set, the interface will not send ARP requests and will only respond to those IP/MAC combinations configured as static entries." Option breakdown:

- * A.#Correct-replies only to statically configured IP/MAC pairs
- * B: Incorrect - ARP entries must have both IP and MAC
- * C/E: No new dynamic entries are added in reply-only mode
- * D: MAC addresses alone are not matched - ARP matches IP/MAC pairs

NEW QUESTION # 114

.....

MTCNA guide materials really attach great importance to the interests of users. In the process of development, it also constantly considers the different needs of users. According to your situation, our MTCNA study materials will tailor-make different materials for you. And the content of the MTCNA Exam Questions is always the latest information contained for our technicals update the questions and answers in the first time.
