The Nutanix Certified Professional - Database Automation (NCP-DB) v6.5 (NCP-DB) questions are available in three easy-to-use forms. The first one is a Nutanix Certified Professional - Database Automation (NCP-DB) v6.5 (NCP-DB) Dumps PDF form, and it is printable and portable. You can print Nutanix Certified Professional - Database Automation (NCP-DB) v6.5 (NCP-DB) questions PDF or can access them by saving them on your smartphones, tablets, and laptops. The Nutanix Certified Professional - Database Automation (NCP-DB) v6.5 (NCP-DB) dumps PDF format can be used anywhere, anytime and is essential for students who like to learn from their smart devices for Nutanix Certified Professional - Database Automation (NCP-DB) v6.5 (NCP-DB) exam.

You can get help from VerifiedDumps Nutanix NCP-DB exam questions and easily pass get success in the Nutanix NCP-DB exam. The NCP-DB practice exams are real, valid, and updated that are specifically designed to speed up NCP-DB Exam Preparation and enable you to crack the Nutanix Certified Professional - Database Automation (NCP-DB) v6.5 (NCP-DB) exam successfully.

Avail Efficient Exam NCP-DB Vce to Pass NCP-DB on the First Attempt

For years our team has built a top-ranking brand with mighty and main which bears a high reputation both at home and abroad. The sales volume of the NCP-DB Study Materials we sell has far exceeded the same industry and favorable rate about our products is

approximate to 100%. Why the clients speak highly of our NCP-DB study materials? Our dedicated service, high quality and passing rate and diversified functions contribute greatly to the high prestige of our products. We provide free trial service before the purchase, the consultation service online after the sale, free update service and the refund service in case the clients fail in the test.

Nutanix NCP-DB Exam Syllabus Topics:

Topic	Details
Topic 1	Describe NDB Concepts: It defines database and NDB terminology. The topic also explains benefits and features of NDB.
Topic 2	Administer an NDB Environment: While focusing on the administration of an NDB environment, this topic focuses on managing NDB profiles, applying procedural concepts, and managing networks in NDB. Lastly, the topic explains sub-topics of managing access controls in NDB and identifying how to use NDB APIs and CLI.
Topic 3	Deploy and Configure an NDB Solution: This topic discusses how to deploy, configure, and NDB Instance.
Topic 4	Operate and Maintain an NDB Environment: Application of procedural concepts to register database server, provision databases, and test and publish database patches. Additionally, the topic explains the right method to apply Linux OS patches. Lastly, it delves into databases and troubleshooting of NDB operations.

Nutanix Certified Professional - Database Automation (NCP-DB) v6.5 Sample Questions (Q115-Q120):

NEW QUESTION # 115

An administrator needs to migrate a large I/O-intensive database that doesn't support multi-disk layout. How should the storage be provisioned with Era to support the database while optimizing performance?

- A. Volume Group with Load Balancing
- B. Storage Spaces
- **C. Volume Group**
- D. vDisk based provisioning

Answer: C

Explanation:

In Nutanix Era, a Volume Group is the recommended storage provisioning method for a large I/O-intensive database that doesn't support a multi-disk layout¹. A Volume Group in Nutanix Era is a collection of disks that can be managed as a single entity, providing a way to aggregate the storage capacity of multiple disks into a larger storage unit¹. This allows for better performance optimization as it enables the database to leverage the combined I/O capabilities of all the disks in the group¹. It's important to note that while other options like Load Balancing, Storage Spaces, and vDisk based provisioning can also be used in certain scenarios, a Volume Group is specifically designed for situations where a single, high-performance storage unit is required¹.

NEW QUESTION # 116

An administrator needs to capture the database transaction logs. Which Time Machine operation does NDB use to satisfy this requirement?

- A. Snapshots
- B. Log Flush
- C. Write-Ahead Logging
- **D. Log Catch-up**

Answer: D

Explanation:

To capture database transaction logs in NDB, the Log Catch-up operation within the Time Machine is used. Log Catch-up retrieves and applies transaction logs (e.g., PostgreSQL WAL, SQL Server logs) to a snapshot, ensuring the database can be restored to a specific point in time. This operation bridges gaps between snapshots by incorporating log data, maintaining a continuous recovery chain.

Other options are incorrect:

- * A. Write-Ahead Logging: A database feature (e.g., in PostgreSQL), not an NDB Time Machine operation.
- * B. Log Flush: Refers to writing logs to disk, not capturing them for recovery.
- * D. Snapshots: Capture the database state but do not handle transaction logs specifically.

Thus, the verified answer is C, aligning with NDB's log management.

NEW QUESTION # 117

For which database engine does Era support rolling back a patch using CLI?

- A. PostgreSQL
- **B. Oracle**
- C. MongoDB
- D. Microsoft SQL Server

Answer: B

Explanation:

Nutanix Era supports a variety of database engines, including Oracle, PostgreSQL, MySQL, and Microsoft SQL Server¹. However, when it comes to rolling back a patch using the Command Line Interface (CLI), this feature is specifically supported for the Oracle database engine¹. This allows for efficient validation of critical database updates and simplifies database rollback¹. Please note that while Era does provide support for other database engines, the ability to rollback a patch using CLI is currently specific to Oracle¹.

NEW QUESTION # 118

Which command can be used to assign a static IP address to the Era VM on ESXi?

set

era-server > era

era-server >

An administrator is trying to register an Oracle Database Server VM to Era.

Which dependency must be met?

- A. Enable reQUIREtty setting on the source database
- B. set path = /sbin/bin/usr/sbin/usr/bin
- **C. SUDO NOPASS access is required**
- D. /TEMP folder must have read-only permissions

Answer: C

Explanation:

To register an Oracle Database Server VM to Era in Nutanix Database Automation (NCP-DB), certain dependencies must be met. One of these is that SUDO NOPASS access is required¹. This allows the Era service to perform necessary operations on the Oracle Database Server VM. As for assigning a static IP address to the Era VM on ESXi, you can use the vSphere Client to configure static IP settings². However, this is not directly related to the registration of an Oracle Database Server VM to Era. Please note that these answers are based on the information available as of my last update in 2021 and may need to be verified with the most recent Nutanix Database Automation (NCP-DB) documentation or resources.

An online retail application requires data to be synchronized between multiple SQL Server databases. This provides clearer reporting from multiple databases at the Same time for consistency at the end of each business day.
What is the best way to fulfill this requirement?

- A. Have all the databases present in the same DBVM and register databases in Era.
- B. Have all the databases in the same Availability Group and register databases in Era.
- C. Have all the databases present in the same DBVM and register databases in Era with Multiple Databases as a Group with one Time Machine.
- D. Have all the databases present in the same DBVM and register databases in Era with One Database with One Time Machine.

Explanation:

Nutanix Era enables you to clone your source databases and refresh the database clones by using snapshots or transaction logs¹. For an online retail application that requires data to be synchronized between multiple SQL Server databases, having all the databases present in the same Database Virtual Machine (DBVM) and registering them in Era with Multiple Databases as a Group with one Time Machine would be the most efficient way to fulfill this requirement¹. This approach allows for clearer reporting from multiple databases at the same time for consistency at the end of each business day¹.
