2025 Pass-Sure NSE7_LED-7.0 – 100% Free Exam Questions Fee | Fortinet NSE 7 - LAN Edge 7.0 Valid Exam Labs

After years of unremitting efforts, our NSE7_LED-7.0 exam materials and services have received recognition and praises by the vast number of customers. An increasing number of candidates choose our NSE7_LED-7.0 study materials as their exam plan utility. There are many advantages for you to look for and admire. The most important and most candidate may concern is the pass rate of our NSE7_LED-7.0 Study Guide. It is unmatched high as 98% to 100%. So choose our NSE7_LED-7.0 practice engine, you are more confident to pass.

Fortinet NSE 7 - LAN Edge 7.0 Sample Questions (Q46-Q51):

NEW QUESTION # 46

Refer to the exhibit.

FORTINET

Name: FAC-Lab

Authentication method: **Default** Specify

NAS IP:

Include in every user group: ☒

Primary Server

IP/Name: 10.0.1.150

Secret:

Connection status: ✔ Successful

Test Connectivity

Test User Credentials

Examine the RADIUS server configuration shown in the exhibit

An administrator has configured a RADIUS server on FortiGate that points to FortiAuthenticator. FortiAuthenticator is acting as an authentication proxy and is configured to relay all authentication requests to a remote Windows AD server using LDAP. While testing the configuration, the administrator noticed that the `diagnosetest authserver` command worked with PAP, however authentication requests failed when using MSCHAP2. Which two solutions can the administrator implement to get MSCHAP2 authentication to work? (Choose two.)

- A. On FortiAuthenticator change the back-end authentication server from LDAP to RADIUS
- B. On FortiGate configure the NAS IP setting on the RADIUS server
- C. On FortiGate update the Secret setting on the RADIUS server
- D. On FortiAuthenticator enable Windows Active Directory Domain Authentication to add FortiAuthenticator to the Windows domain

Answer: A,D

Explanation:

Explanation

According to the exhibit, the RADIUS server configuration on FortiGate points to FortiAuthenticator, which is acting as an authentication proxy and is configured to relay all authentication requests to a remote Windows AD server using LDAP. However, LDAP does not support MSCHAP2 authentication, which is required for RADIUS. Therefore, option A is true because on FortiAuthenticator, enabling Windows Active Directory Domain Authentication will add FortiAuthenticator to the Windows domain and allow it to use MSCHAP2 authentication with the AD server. Option C is also true because on FortiAuthenticator, changing the back-end authentication server from LDAP to RADIUS will allow it to use MSCHAP2 authentication with the AD server. Option B is false because on FortiGate, configuring the NAS IP setting on the RADIUS server will not affect the MSCHAP2 authentication, but rather the source IP address of the RADIUS packets. Option D is false because on FortiGate, updating the Secret setting on the RADIUS server will not affect the MSCHAP2 authentication, but rather the shared secret between FortiGate and FortiAuthenticator.

NEW QUESTION # 47

Which two statements about the use of digital certificates are true? (Choose two.)

- A. To validate the signature on a certificate, an endpoint does not need to know the CA of that certificate.
- B. An intermediate CA can sign other certificates.
- C. A chain of trust may include one or more intermediate CAs.
- D. In a chain of trust, the root CA is signed by another certificate.

Answer: B,C

NEW QUESTION # 48

Refer to the exhibit

Examine the FortiGate RSSO configuration shown in the exhibit

FortiGate is configured to receive RADIUS accounting messages on port3 to authenticate RSSO users. The users are located behind port3 and the internet link is connected to port1. FortiGate is processing incoming RADIUS accounting messages successfully and RSSO users are getting associated with the RSSO Group user group. However, all the users are able to access the internet, and the administrator wants to restrict internet access to RSSO users only. Which configuration change should the administrator make to fix the problem?

- A. Create a second firewall policy from port3 to port1 and select the target destination subnets
- B. Enable Security Fabric Connection on port3
- C. Add RSSO Group to the firewall policy
- D. Change the RADIUS Attribute Value setting to match the name of the RADIUS attribute containing the group membership information of the RSSO users

Answer: C

Explanation:

According to the exhibit, the firewall policy from port3 to port1 has no user group specified, which means that it allows all users to access the internet. Therefore, option B is true because adding RSSO Group to the firewall policy will restrict internet access to RSSO users only. Option A is false because changing the RADIUS Attribute Value setting will not affect the firewall policy, but rather the RSSO user group membership. Option C is false because enabling Security Fabric Connection on port3 will not affect the firewall policy, but rather the communication between FortiGate and other Security Fabric devices. Option D is false because creating a second firewall policy from port3 to port1 will not affect the existing firewall policy, but rather create a redundant or conflicting policy.

NEW QUESTION # 49

Which two statements about the guest portal on FortiAuthenticator are true? (Choose two.)

- A. Each remote user on FortiAuthenticator can sponsor up to 10 guest accounts
- B. The guest portal provides pre and post-log in services
- C. Administrators can use one or more incoming parameters to configure a mapping rule for the guest portal
- D. Administrators must approve all guest accounts before they can be used

Answer: B,C

Explanation:

The guest portal on FortiAuthenticator can offer services both before and after a guest logs in, such as displaying terms of use before login and providing access to network resources after successful authentication.

Administrators have the ability to configure mapping rules for the guest portal using various incoming parameters. This allows for flexible and dynamic handling of guest account creation and access permissions based on different criteria.

NEW QUESTION # 50

Refer to the exhibit.

Examine the FortiGate user group configuration and the Windows AD LDAP group membership information shown in the exhibit. FortiGate is configured to authenticate SSL VPN users against Windows AD using LDAP. The administrator configured the SSL VPN user group for SSL VPN users. However, the administrator noticed that both the student and jsmith users can connect to SSL VPN. Which change can the administrator make on FortiGate to restrict the SSL VPN service to the student user only?

- A. In the SSL VPN user group configuration set Group Name to CN=SSLVPN, CN=users, DC=trainingAD, DC=training, DC=lab
- B. In the SSL VPN user group configuration set Group Name to CN=Domain users, CN=Users, /DC=trainingAD, DC=training, DC=lab.
- C. In the SSL VPN user group configuration change Type to Fortinet Single Sign-On (FSSO)
- D. In the SSL VPN user group configuration, change Name to cn=sslvpn, CN=users, DC=trainingAD, Detraining, DC=lab.

Answer: A

Explanation:

According to the FortiGate Administration Guide, "The Group Name is the name of the LDAP group that you want to use for authentication. The name must match exactly the name of the LDAP group on the LDAP server." Therefore, option A is true because it will set the Group Name to match the LDAP group that contains only the student user. Option B is false because changing the Name will not affect the authentication process, as it is only a local identifier for the user group on FortiGate. Option C is false because setting the Group Name to Domain Users will include all users in the domain, not just the student user. Option D is false because changing the Type to FSSO will require a different configuration method and will not solve the problem.

NEW QUESTION # 51

.....

This allows candidates to choose the format that best suits their learning style and preference, ensuring a seamless and effective exam preparation experience. By offering tailored solutions to meet individual needs, ValidExam has established itself as a trusted provider of top-quality Fortinet NSE 7 - LAN Edge 7.0 (NSE7_LED-7.0) exam preparation material.
