A customer wants to deploy 12 FortiAP 431F devices on high density conference center, but they do not currently have any PoE switches to connect them to. They want to be able to run them at full power while having network redundancy. From the FortiSwitch models and sample retail prices shown in the exhibit, which build of materials would have the lowest cost, while fulfilling the customer's requirements?

- A. 2x FortiSwitch 248E-FPOE
- B. 2x FortiSwitch 224E-POE
- C. 1x FortiSwitch 248EFPOE
- D. 2x FortiSwitch 124E-FPOE

Answer: A

Explanation:

The customer wants to deploy 12 FortiAP 431F devices on a high density conference center, but they do not have any PoE switches to connect them to. They want to be able to run them at full power while having network redundancy. PoE switches are

switches that can provide both data and power to connected devices over Ethernet cables, eliminating the need for separate power adapters or outlets. PoE switches are useful for deploying devices such as wireless access points, IP cameras, and VoIP phones in locations where power outlets are scarce or inconvenient. The FortiAP 431F is a wireless access point that supports PoE+ (IEEE 802.3at) standard, which can deliver up to 30W of power per port. The FortiAP 431F has a maximum power consumption of 25W when running at full power. Therefore, to run 12 FortiAP 431F devices at full power, the customer needs PoE switches that can provide at least 300W of total PoE power budget (25W x 12). The customer also needs network redundancy, which means that they need at least two PoE switches to connect the FortiAP devices in case one switch fails or loses power. From the FortiSwitch models and sample retail prices shown in the exhibit, the build of materials that has the lowest cost while fulfilling the customer's requirements is 2x FortiSwitch 248E-FPOE. The FortiSwitch 248E-FPOE is a PoE switch that has 48 GE ports with PoE+ capability and a total PoE power budget of 370W. It also has 4x 10 GE SFP+ uplink ports for high-speed connectivity. The sample retail price of the FortiSwitch 248E-FPOE is \$1,995, which means that two units will cost \$3,990. This is the lowest cost among the other options that can meet the customer's requirements. Option A is incorrect because the FortiSwitch 248EFPOE is a non-PoE switch that has no PoE capability or power budget. It cannot provide power to the FortiAP devices over Ethernet cables. Option B is incorrect because the FortiSwitch 224E-POE is a PoE switch that has only 24 GE ports with PoE+ capability and a total PoE power budget of 185W. It cannot provide enough ports or power to run 12 FortiAP devices at full power. Option D is incorrect because the FortiSwitch 124E-FPOE is a PoE switch that has only 24 GE ports with PoE+ capability and a total PoE power budget of 185W. It cannot provide enough ports or power to run 12 FortiAP devices at full power. NEW QUESTION # 43

Refer to The exhibit, which shows a topology diagram.

A customer wants to use SD-WAN for traffic generated from the data center towards Branches. SD-WAN on HUB should follow the underlay condition on each Branch and the solution should be scalable for hundreds of Branches. Which SD WAN-Rules strategy should be used?

- A. Lowest Cost SLA
- **B. Best Quality based on route-tags**
- C. Auto based on link quality
- D. Manual based on route-tags

Answer: B

NEW QUESTION # 44

Refer to the exhibit.

```

config vpn ipsec phase1-interface
edit MyVPN1
    set remote-gw 1.2.3.4
    set interface {{WAN}}
    set peertype any
    set proposal aes256-sha256
    set psksecret Fortinet!!Fortinet
next
end
config vpn ipsec phase2-interface
edit MyVPN1
    set phase1name MyVPN1
    set proposal aes256-sha256
    set auto-negotiate enable
next
end

```

FortiManager is configured with the Jinja Script under CLI Templates shown in the exhibit.

Which two statements correctly describe the expected behavior when running this template? (Choose two.)

- A. The template will work if you change the variable format to \$(WAN).
- B. The template will work if you change the variable format to {{ WAN }}.
- C. The administrator must first manually map the interface for each device with a meta field.
- D. The template will fail because this configuration can only be applied with a CLI or TCL script.
- E. The Jinja template will automatically map the interface with "WAN" role on the managed FortiGate.
- F. The template will fail because this configuration can only be applied with a CLI or TCL script.

Answer: C,F

Explanation:

The Jinja template in the exhibit is trying to configure the interface role on the managed FortiGate. This type of configuration can only be applied with a CLI or TCL script. The Jinja template will fail because it is not a valid CLI or TCL script.

Explanation:

d) The administrator must first manually map the interface for each device with a meta field.

The Jinja template in the exhibit is expecting a meta field called WAN to be set on the managed FortiGate. This meta field will specify which interface on the FortiGate should be assigned the "WAN" role. If the meta field is not set, then the template will fail.

NEW QUESTION # 45

Refer to the exhibit.

A customer wants FortiClient EMS configured to deploy to 1500 endpoints. The deployment will be integrated with FortiOS and there is an Active Directory server.

Given the configuration shown in the exhibit, which two statements about the installation are correct? (Choose two.)

- A. A client can be eligible for multiple enabled configurations on the EMS server, and one will be chosen based on first priority
- B. The Windows clients only require "File and Printer Sharing" allowed and the rest is handled by Active Directory group policy
- C. You must use Standard or Enterprise SQL Server rather than the included SQL Server Express
- D. You can only deploy initial installations to Windows clients.
- E. If no client update time is specified on EMS, the user will be able to choose the time of installation if they wish to delay.

Answer: B,E

Explanation:

A is correct because if no client update time is specified on EMS, the user will be able to choose the time of installation if they wish to delay. This is because the FortiClient EMS server will not force the installation on the client.

E is correct because the Windows clients only require "File and Printer Sharing" allowed and the rest is handled by Active Directory group policy. This is because the Active Directory group policy will configure the Windows clients to automatically install FortiClient and the FortiClient EMS server will only need to push the initial configuration to the clients.

The other options are incorrect. Option B is incorrect because a client can only be eligible for one enabled configuration on the EMS server. Option C is incorrect because you can deploy initial installations to both Windows and macOS clients. Option D is incorrect because you can use the included SQL Server Express to deploy FortiClient EMS.
