Oracle 1Z0-076 Certification Exam Syllabus and Exam Questions

Oracle 1Z0-076 Exam

www.DBExam.com
Get complete detail on 1Z0-076 exam guide to crack Oracle Database 19c - Data Guard Administration. You can collect all information on 1Z0-076 tutorial, practice test, books, study material, exam questions, and syllabus. Firm your knowledge on Oracle Database 19c - Data Guard Administration and get ready to crack 1Z0-076 certification. Explore all information on 1Z0-076 exam with number of questions, passing percentage and time duration to complete test.

DOWNLOAD the newest ExamTorrent 1z0-076 PDF dumps from Cloud Storage for free: <https://drive.google.com/open?id=1P3I2mEdv0OfEod2PMKNCI5UHZtxJQHW>

Our Oracle Exam Questions greatly help Oracle Database 19c: Data Guard Administration (1z0-076) exam candidates in their preparation. Our Oracle 1z0-076 practice questions are designed and verified by prominent and qualified Oracle Database 19c: Data Guard Administration (1z0-076) exam dumps preparation experts. The qualified Oracle Database 19c: Data Guard Administration (1z0-076) exam questions preparation experts strive hard and put all their expertise to ensure the top standard and relevancy of 1z0-076 exam dumps topics.

The ExamTorrent Oracle Database 19c: Data Guard Administration (1z0-076) PDF dumps file is a collection of real, valid, and updated 1z0-076 practice questions that are also easy to install and use. The 1z0-076 PDF dumps file can be installed on a desktop computer, laptop, and even on your smartphone devices. Just download ExamTorrent Oracle Database 19c: Data Guard Administration in 1z0-076 PDF Questions on your desired device and start Oracle 1z0-076 exam dumps preparation today.

Review 1z0-076 Guide | 1z0-076 Hot Questions

Our 1z0-076 study materials are very popular in the international market and enjoy wide praise by the people in and outside the circle. We have shaped our 1z0-076 exam questions into a famous and top-ranking brand and we enjoy well-deserved reputation among the clients. Our 1z0-076 learning guide boosts many outstanding and superior advantages which other same kinds of exam materials don't have. And we are very reliable in every aspect no matter on the quality or the according service.

Oracle Database 19c: Data Guard Administration Sample Questions (Q77-

Q82):

NEW QUESTION # 77

Which three are prerequisites for using Data Guard Broker?

- A. A statically defined listener end-point must be registered with the local listener on the servers hosting the standby database instances.
- B. If any database in the configuration is a RAC database, then the broker configuration files must reside in shared storage accessible by all database instances for all databases in the broker configuration.
- C. Network connectivity to the primary database instance must be defined on the servers hosting the standby database instances.
- D. The primary and standby databases must run the same version of the Oracle Database server.
- E. DG_BROKER_START must be set to TRUE for a database instance before adding the database to the broker configuration.
- F. The broker configuration files for a RAC database must reside in shared storage accessible by all the RAC database instances.

Answer: B,C,D

Explanation:

Data Guard Broker is a management tool that simplifies the configuration, management, and monitoring of Data Guard environments. The prerequisites for using Data Guard Broker include:

* The primary and standby databases must run the same version of the Oracle Database server (A):

This ensures compatibility between the primary and standby databases and enables seamless role transitions and data synchronization.

* Network connectivity to the primary database instance must be defined on the servers hosting the standby database instances (B): Proper network connectivity is essential for communication between the primary and standby databases, allowing for the replication of data and the synchronization of changes.

* If any database in the configuration is a RAC database, then the broker configuration files must reside in shared storage accessible by all database instances for all databases in the broker configuration (D): In Real Application Clusters (RAC) environments, shared storage ensures that all instances of the RAC database can access the broker configuration files, facilitating the management of the Data Guard environment across all instances. NEW QUESTION # 78

Which THREE statements are TRUE about Global Sequences when connected to a physical standby database with Real-Time Query enabled?

- A. They must have the NOORDER and CACHE options set.
- B. If the CACHE option is set then the size of the cache must be at least 100.
- C. Their usage may have a performance impact on the physical standby database if the CACHE size is too small.
- D. Their creation requires that a LOG_ARCHIVE_DEST_n parameter be defined in the standby that points back to the primary.
- E. Their usage will always have a performance impact on the primary database.

Answer: A,C,E

Explanation:

Global Sequences are Oracle sequences that generate unique values across multiple instances in an Oracle RAC or a Data Guard configuration. Regarding their behavior and performance when connected to a physical standby database with Real-Time Query enabled:

A: The usage of Global Sequences can indeed have a performance impact on the primary database due to the need to generate unique values that are consistent across both primary and standby databases.

D: The performance impact on the physical standby database may occur if the CACHE size is too small. This is because the standby database will frequently have to access the primary database to replenish the cache, which can increase the load and potentially lead to performance degradation.

E: Global Sequences should have the NOORDER and CACHE options set. The NOORDER option ensures that sequence numbers are provided without guaranteeing sequence order, thus improving scalability and performance. The CACHE option is used to specify how many sequence values will be held in memory for faster access.

Option B is incorrect as the LOG_ARCHIVE_DEST_n parameter's definition for standbys pointing back to the primary does not

directly pertain to the creation of sequences.

Option C is incorrect because there is no requirement that the size of the cache for a sequence must be at least 100. The CACHE size can be set to a different number based on specific use cases or performance considerations.

NEW QUESTION # 79

Which THREE statements are true about snapshot standby databases?

- A. A snapshot standby database can be the only standby database in a Maximum Protection Oracle Data Guard configuration.
- B. A snapshot standby database must be opened at least once in read-write mode before it can be converted into a physical standby database.
- C. A guaranteed restore point is created automatically when a physical standby database is converted into a snapshot standby database.
- D. Snapshot standby databases may be used for rolling database upgrades.
- E. If datafiles grow while a database is a snapshot standby database, then they shrink when converted back to a physical standby database.

Answer: B,C,D

NEW QUESTION # 80

Which THREE are always benefits of using a logical standby database?

- A. It provides a disaster-recovery solution with switchover and failover options that can recover any data updated on the primary database.
- B. It can be used for testing patchsets without affecting the primary database.
- C. It can be used as an updatable database for Real Application Testing and then converted back to a standby database without affecting the updates.
- D. It can be used to replicate a single pluggable database (PDB) in a multitenant container database.
- E. It can be used for database rolling release upgrades.
- F. It can be used for reporting workloads requiring additional indexes or materialized views or both.

Answer: A,E,F

Explanation:

Logical standby databases are a key feature of Oracle Data Guard and offer several distinct advantages, especially in terms of flexibility for reporting, upgrades, and disaster recovery:

* Disaster-recovery solution with switchover and failover options (A): Logical standby databases provide a robust disaster-recovery solution, ensuring that any data updated on the primary database can be recovered. They support both switchover and failover operations, allowing for smooth role transitions between the primary and standby databases.

* Used for reporting workloads requiring additional indexes or materialized views (B): Logical standby databases can be opened for read-write operations and can have additional indexes or materialized views that are not present in the primary database. This makes them ideal for offloading reporting and querying workloads from the primary database.

* Database rolling release upgrades (D): Logical standby databases can be used to perform rolling upgrades of the Oracle Database software. This allows the database to be upgraded with minimal downtime, as the standby database is upgraded first, followed by a switchover to make it the new

* primary.

NEW QUESTION # 81

You are using Data Guard in conjunction with Global Database Services.

You have a Data Guard Broker configuration called Sales and a GDS pool called Prod.

Which three are true concerning the management of the broker configuration when using GDS?

- A. DGMGRL may be used to add a single database to the Sales configuration even if Sales is a member of the Prod pool.
- B. Performing a role change with DGMGRL automatically notifies GDS which in turn activates the appropriate services.
- C. Adding a database to the Sales configuration with DGMGRL automatically adds the database to the Prod Pool.

- D. DGMGRL may be used to add the Sales configuration to the Prod pool in gds.
- E. Adding a database to the Sales configuration with DGMGRL requires that the Sales configuration be disabled first. It must then be enabled after the new database is added to the configuration.

Answer: A,B,D

Explanation:

In the context of Oracle Data Guard and Global Database Services (GDS):

* DGMGRL may be used to add the Sales configuration to the Prod pool in gds (A): Data Guard Broker's command-line interface DGMGRL can be utilized to manage configurations with GDS, allowing the addition of Data Guard Broker configurations to GDS pools.

* Performing a role change with DGMGRL automatically notifies GDS which in turn activates the appropriate services (B): When a role change is executed using DGMGRL, GDS is automatically notified, and it then activates the services that are appropriate for the new database roles.

* DGMGRL may be used to add a single database to the Sales configuration even if Sales is a member of the Prod pool (C): DGMGRL provides the capability to manage individual databases within a broker configuration, including adding databases to a configuration that is already part of a GDS pool.
